### News & Reviews

#### GAMES NEWS ..... 18

Take a quiet ride in the country with those nice Duke boys aboard the General Lee, and solve the mystery of the Time Gate.

#### VIDEO SCREENS ..... 28

E.T. fever is sweeping the country, and we're joining in, plus news of the awesome System X.

#### ARCADE ACTION ... 30

If ever a game captured the heart of an editor, Pengo is it. He wanted to change this column's name to Antarctic Action after playing the "Game of '83", but we persuaded him to find room for some Dig-Dug tips too.

#### REVIEWS ..... 98

There's a round up of asteroid games for the Spectrum, plus Vic chess.

#### NEXT MONTH ..... 4

### Listings

#### SUBMARINE HUNTER ..... 32

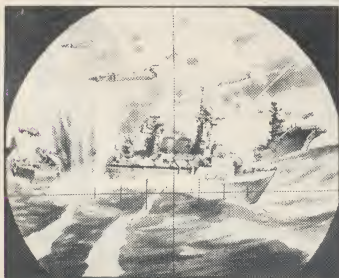

Take your helicopter out over the icy seas and tackle the enemy hidden below the waves. Your task is to seek out and destroy the Atari subs but keep a wary eye on their protective destroyers.

#### NIBBLERS ..... 38

Yes, its those little creatures with the big appetite back again in this special adaptation of our Game of the Year, written this time for the Vic-20.

#### DRAGON'S TEETH ..... 42

In days of old when knights were bold ... they never had to use a table tennis bat to fight dragons with! There's no time for chivalry here — just aim for the fire breathing beasties molars and knock them out. Dentistry made easy on your Dragon.

#### GALAXIANS ..... 56

Arcade alien action for Spectrum owners as a convoy of nasty beings sweeps across the universe with one aim in mind. To wipe you out ...

#### CRITICAL MASS ..... 58

Overcrowding could prove fatal in this board game which really goes with a bang. Explosive intellectual action for TRS-80 owners.

#### MZ-LUDO ..... 62

Tactics and quick thinking are what you need to beat the computer at its own game on the Sharp MZ-80K.

#### TARGET ..... 68

For Texas TI 99/4a owners with a death wish ...

#### BULLION SNATCH ..... 45

Psst! Want to grab a gold record? Well here's your chance. Sneak around a maze and bag the bullion on your Acorn Atom.

#### CURSE OF THE AZTEC TOMB ..... 46

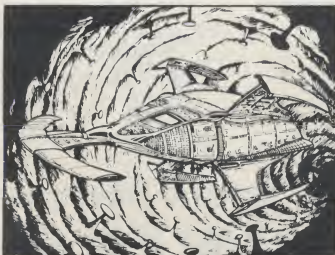

In the darkest recesses of an ancient tomb there is a treasure so mysterious that it is only mentioned in whispers. Only ZX81 owners will be brave enough ...

#### TUNNEL RUN ..... 50

Zapping through narrow tunnels in your Pet.

#### CAVE FLIGHT ..... 52

On a mission to save your planet from an energy crisis your space freighter is stricken with a terminal illness. Dare you program this game into your BBC micro!

### On the warpath...

Just when all seems lost that cavalry bugle sounds and the Indians take flight.

But that may be true of films but don't expect it in our Warpath game.

Ron Potkin is serialising his thrilling wild west war game in such a way as to improve your own programming skills.

Ron is a self-confessed memory miser and a Briton whose games earned a special prominence in the US's micro computer infancy.

At the end of the series, you'll not only have a game which John Wayne would excel in, but enough knowledge and a working base on which to build your own wargame scenarios.

Turn to page 88 and take to the Warpath.

### Features

#### MAILBAG ..... 7

Talking points, tips and advice

#### COMPETITION ..... 10

Win a place among the UK's professional games designers

#### SEVEN EMPIRES ..... 16

Our unique game/competition starts next month but here's a chance to check-out the rules.

#### BUGS ..... 25

T. Hitch tangles with the Graphic Real-time Organic Programming Expressions language.

#### CHESS ..... 27

Max Bramer goes by the book.

#### PUZZLING ..... 72

Three hand-held space invaders are up for grabs if you can shoot down ours.

#### BRIDGE ..... 75

Alan Hiron holds a branch search meeting

#### MACHINE CODE .... 78

Inside the microprocessor, with Ted Ball

#### ADVENTURE ..... 82

Developing a plot. Keith Campbell puts a few verbs in the melting pot.

#### WARPATH ..... 88

The start of our series on wargaming.

#### GRAPHICS ..... 97

Garry Marshall reads between the lines, with some rudimentary animation techniques.

## BEFRIEND AN ALIEN TODAY

**NEXT  
MONTH**

In Space Watch we first invited you to befriend the aliens, long before anyone had seen a pirated copy of that E.T. character.

Now our science fiction specialist, David Langford takes the diplomacy before galactic destruction line a step further with Taming The Invaders.

This really is a game with a message, in fact there's lots of messages, all sent by you — the player — to the teeming millions of confused space creatures thronging our atmosphere.

There's getting to be so many of the little green devils out there that they'll soon be in danger of pollut-

ing the atmosphere. Can you successfully find the alien code to persuade them your species is intelligent? . . . Is this asking too much of C&VG readers? No, of course not!

Follow the second article in our Warpath series, which not only promises to tidy up and speed up your programming, but also gives you a fully-fledged Wild West war-game at the end of the article.

There's also some classic games waiting for you between the covers: Crazy Kong relives the thrills of a well-known arcade game; Escape from the Pyramids of Mars; Over the Orchard Wall; Airline Pilot; Golf; Pompeii and many more.

**NEXT  
MONTH**

You will notice that the February issue of *Computer & Video Games* stands out a little more on the news-stands.

This is because it is not alone on the shelf but closely closetted with a friend, *The C&VG Book of Games*.

Forty-eight pages of games for all the popular computers, tightly packed into one super free supplement to ensure that the Christmas micro is put to good use.

Of course we won't be cutting down the usual high quality content of the magazine, we've just been working specially hard, looking out and testing extra programs for the *Book of Games* and we hope you think that it's been worthwhile.

Let us name just a few: Star Trek, Snakes, Ghosts, Victorian Sewers, 3D Maze, Space Attack, Golf, Word Find, Magic Square, Red Alert and others too numerous to mention. Be sure and get your free *Book of Games*. Newsagents have been warned to expect the rush from Saturday January 15.

## THE SEVENTH EMPIRE GOES TO WAR

The Seventh Empire will be at war as from the February issue of *Computer & Video Games* and we want you to get involved in the conflict.

A rulebook is on the way to all of you who have so far entered this unique play-by-mail game but the rules are also briefly outlined for the curious on pages 16 and 17 of this issue.

If you haven't yet sent in your entry form then please fill in the form below straight away and despatch it to us. Because of the strange deadlines imposed upon us by Christmas holidays, only those forms which reach us by December 21st will be entered for the first round of the game in our February issue. Any entries which arrive later will be included in the March issue game of Seventh Empire.

The Seventh Empire is a unique game/competition which will only cost you the price of a stamp each month. Specially designed

for C&VG by Mike Singleton, the inventor of Britain's top computer-moderated-game, Starboard, it can be played by up to 10,000 readers.

There will be a winner each month and an overall winner over the entire run of the game. The winner of our first turn in February will win a Colour Genie home computer.

Every player will control one of the galaxy's many tribes with seven space fleets to despatch around the star system. He will hire his fleets out as mercenaries to take part in the conflicts between rival empires, choose plum planets rich in resources to raid, commit acts of piracy on rival fleets or trade his way up to a high score by careful watching of the galactic fortunes and commodities.

The game is moderated by a Commodore Pet computer at our end but there is no luck in the play, only skill, foresight and

sheer animal cunning. Each month a new galactic map will be published in C&VG to show ship numbers at each star system and help you work out your tribe's profits.

We will also publish battle reports which may have changed the face of the galactic map. A diplomatic diagram which will show how the empires have reacted to wars and raiding ships, which empires are currently at peace and which have declared war.

Information on where the imperial ships are travelling to and a Gateway chart which will show which of the 600 or so routes were hit by pirates. From this information you will be able to piece together your score for the turn.

At our end the computer will come up with a top 10 high scorers for that issue. Scores will vary from several thousand points amassed to minus figures for those who traded badly.

Send the form below to: The Seventh Empire, *Computer & Video Games*, Durrant House, 8, Herbal Hill, London EC1R 5JB.

Several of you sent in entries on letters and other pieces of paper last month and we decided to accept them, but if you are a new entrant please send off this form on the left cut out at the dotted line.

**Please include me in the Seventh Empire Competition.  
The name of the tribe I will play in the game is:**

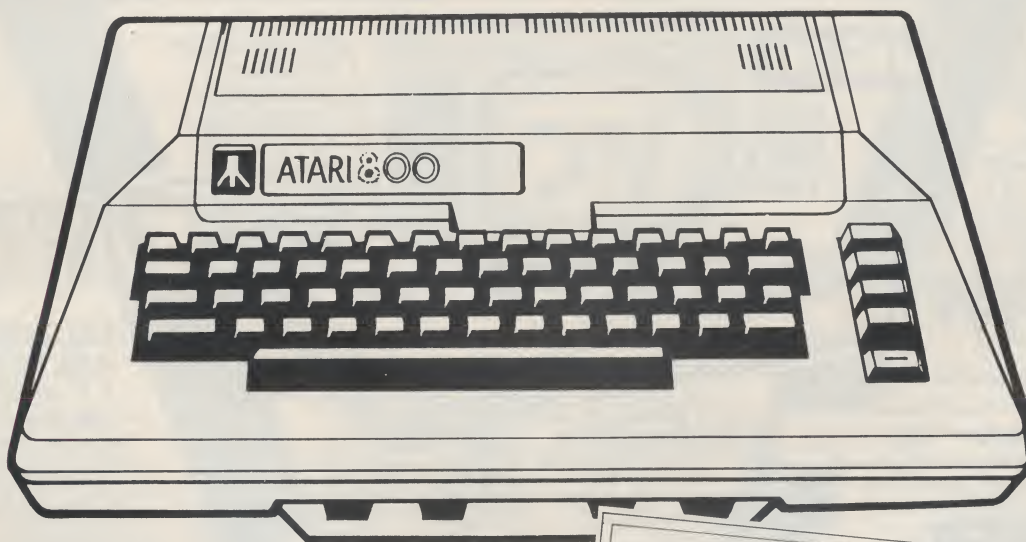

**My name is:** .....

**Address** .....

## BIRTHDAY BOUQUET!

Dear Editor,  
Happy first birthday from one of the countless satisfied readers — and shame on you for not mentioning it yourselves!

Yes, it was one year ago that *Computer and Video Games* first hit our news stands. And what a year it's been! Twelve excellent games programs for the Atom, Fabulous articles and artwork, great reviews and your little cartoon Bugs provide good humour (despite their nasty habits).

I hope you continue for many more years to come with your very high standards of publishing. And as long as you keep printing games for the Atom you'll have at least one loyal reader.

Keith Robertson,  
Carshalton,  
Surrey

## PIMANIA PIMANIAC!

Dear Sir,  
I am a Pimaniac! And I'm answering your call in the November issue. First, let me say that Pimania is absolutely fantastic — and with the golden sundial as its prize I have become completely hooked on it.

It might be useful for other readers to note that the way to move around the world of the Piman is completely logical, if you take good notice of the clues given just after you get into the program. Unless you spot this you could be wasting days going up blind alleys!

The Piman isn't really as horrible as he makes out, if you learn to treat him right. You'll have to learn what takes his fancy in different parts of his world, and what upsets him.

To tell the truth I still

haven't got a clue where the sundial is — but as long as Pimania continues to keep me rolling about with laughter I don't care.

My friends who have other machines want to know for what other micros Pimania will be produced and when.

While I think that it is good that you will be giving readers hints and tips in your pages. I hope you don't give too much away — it's taken some of us a long time to work out the mysteries of Pimania.

Well done *Computer and Video Games* for bringing us news of Pimania first!! Keep up the good work.

Raurie Morris,  
Streatham,  
London.

**Editor's reply:** The micros next in line for Pimania are the Dragon 32 and BBC Model B planned sometime for the New Year.

## AND HERE'S ANOTHER!

Dear Pi-men,  
Does the line the Pimania song "I haven't got a lot of hair" refer to Clive Sinclair, and is the world of the Piman inside uncle Clive's head? Also is it the man himself in the background at the end of the song? Also is it Ian Dury who does the vocals?

Does the can of worms refer to one of your earlier sets of games and can I use the megaphone anywhere? Is the Pi symbol significant?

Lastly, when the Piman tries to sell me a tee-shirt, is this part of the game or are you just trying to get more money out of me? By the way, I have become completely addicted to the search for the golden sundial of Pimania, and I'll find it if it's the last thing I do!!

Jennie Barratt,  
Kowloon,  
Hong Kong.

**Editor's reply:** Here are the answers to your questions from Automata.

No.

**Who knows what's inside Clive's head?**

If we had asked him to the recording studios he would have turned up 18 weeks late!

No comment.

Yes.

Yes.

Totally!

Of course it's for more money.

## SOFTWARE WORRIES . . .

Dear Sir,  
I own a 32K Atari 400. I'm becoming very concerned about the service being offered by some software firms. Quite a number of firms are offering programmes for the Atari knowing, and freely admitting that they have no stocks at all of the material and in some cases they do not even have a delivery date for when stocks will be available.

In some cases the problem is that the firm, in all innocence has misjudged demand or has been let down by a supplier. However, in some cases failure to supply appears so common that the suspicion must arise that virtually no stocks are held and the firm waits for a customer's order

before contacting the wholesaler.

Having parted with your money, getting hardware repaired or defective software replaced is not easy. At the time of writing my Atari has been away a month having a "minor" fault repaired.

M. P. Nicholson,  
Bridgwater,  
Somerset.

## QUESTIONS ANSWERED

Dear Sir,

I have a few questions to ask about the ZX81. The first question is whether or not you can invert the screen so it prints black on white and if so how do you do it? Also there is the question of where you can get a cheap hi-res graphics from?

I have thought of a great idea! Why don't you have a place in your magazine where people can send in small programs they have written for small amounts of money?

Finally, I am thinking of buying a ZX Spectrum and selling my ZX81. What would be the highest amount of money I could get for it?

J. Morton,  
Bishop Auckland  
Co. Durham

**Editor's reply:** To invert the screen, try the graphics toolkit from JRS Software or even the 4K graphics ROM from DK 'Tronics. This will also provide hi-res graphics. Kayne also do a cheap hi-res graphics board.

Many of our contributors tell us we already pay "small amounts of money" but if anyone would like to send in small routines for getting around certain problems we will look at the possibility of starting up such a page. Finally, I think you could expect around £25 for you ZX81 Mr Morton.

## THANKS FROM A TEXAN!

Dear Sir,  
A big thank-you *Computer and Video Games* for a program for my TI 99/4a. I am now buying your magazine not just skimming through it at a bookstall! I am certain many T.I. owners, there are a lot of us out here, will be doing likewise.

Will you be inviting programs suitable for the TI 99/4 or 99/4a? Stay on the Texas bandwagon.

Bernard Bailey,  
Althorne,  
Essex

**Editor's reply:** We are always interested in new and original programs Bernard. How about sending us some of your ideas.

## MAGAZINE MOANS . . .

Dear Sir,  
I read with interest your article on the TI 99/4a home computer, but the reference to the 99'er magazine at the conclusion of the article was of particular interest — and inaccurate. I would like to take this opportunity to inform you and your readers that MPI of Cambridge Road, Barking are no longer supplying 99'er magazines and would urge them not to part with any money.

MPI said that they were returning my subscription. That was in August and I'm still waiting!!

I would like to add that since February I received only two 99'er magazines from MPI which in my book is absolutely terrible service.  
M. K. Needham,  
Penarth,  
South Glamorgan.

## SPECTRUM SHOWDOWN

Dear Sir,  
I feel it is up to BBC and Atari owners to voice their feelings about some of the facts contained in the Sinclair Spectrum brochure inserted in many computer magazines.

For any person about to buy a computer, I can assure you that the extra money

spend in the purchasing an Atari 400 or a BBC micro is money well spent. Below, are some facts that are incorrect or omitted from the Spectrum brochure.

I own an Atari 400, and I have used a BBC, and they are amazing machines. Their graphics resolution is far superior to the Spectrums, and the comparison of the BBC and Atari's four sound channel to the Spectrum's channel (all one of them), is absolutely ridiculous.

The brochure claims that the Atari computer can only present five colours on the screen at once. This is not true. Three of Atari's fourteen graphics mode support 16 colours or luminances on a 15360 point array, without the intervention of the Atari's second micro, ANTIC.

Using ANTIC, it is possible to have all 128 colour

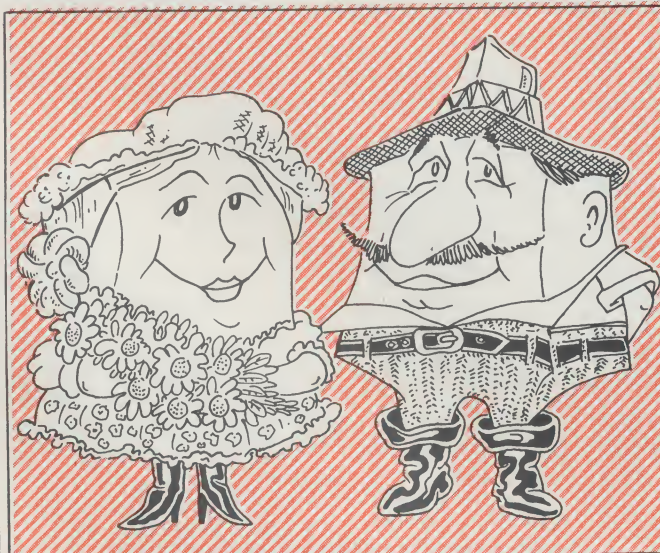

have to be purchased to bring the basic machine up to the standard of most computers.

I'm sure that the cost of adding colour graphics, sound channels, A to D, Hi-res graphics and a neat case to house the arrangement, to any of Sinclair's computers would easily outprice the £199 that the Atari 400 costs, not to mention the amount of processor time available from a single micro that has to look after all of this.

M. D. Caballero,  
Ramsgate  
Kent.

## MICROVADER MUDDLE . . .

Dear Sir,  
I am still struggling with your July issue's Microvaders

luminance combinations on a 61440 array. ANTIC also offers fine scrolling windows, player missile graphics, display list interrupts etc.

Any combination of the fourteen graphics modes can be mixed on the screen, and all this leaves the 6502 almost totally free to execute the user's program.

Sinclair's brochure also omits the fact that the Atari has eight easily accessible A to D ports, four joystick ports (which can be used as outputs as well) and a cartridge slot for ROM based software.

This removes the necessity of the Sinclair computers expensive Christmas-tree arrangement of add on that

program for the ZX81. I have noted the corrections which you published in your August issue but I am still not getting it working. In particular line 18 is quite hard to read and I think my error may be in that.

W. Davison,  
Scotland.

**Editor's reply:** Some people do seem to have had difficulty with Microvaders, despite the other way we suggested they approach the program in our August issue's *Confessions of a Bug*. Line 18 may be the cause of the problem. The third line of line 18 reads: '0028BA00'. This is correct but people are mistaking the 'B' with an '8'.

## PRINTING PROBLEMS

Dear Sir,  
I have a TRS-80 16K level 2 and have made quite a few good programs which I want to send in to your magazine. However, I have no printer and since most of them want the program printed out I have a problem.

So is there anyone out there who could print out the program for me?

Ian Bailey,  
Streatham,  
London.

## SINCLAIR SOLUTIONS

Dear Sir,  
I have recently purchased a Sinclair ZX81 and only just getting involved in the fun of operating it. It is a tremendous piece of equipment especially for its price. We are very limited here in the options available.

Even the range of cassette programs is very limited. If I had the finance available I would certainly like to set up a completely Sinclair based computer shop here in Christchurch.

However, back to reality. I read in your July issue — *Mailbag* the problem that D. McRiner was having with 'Edit' on the ZX81. It seemed related to time the computer had been on but could it be the problem experienced with the ZX when you are running close to its memory limit?

If this is the case then I would suggest the following:

1. Place cursor at the line requiring edit.
2. Depress 'CLS' then 'NEWLINE'.
3. Depress 'SHIFT/EDIT' together.

This will clear the screen and put the line that requires edit at the bottom.

Your magazine is excellent and very useful over here with the lack of software games etc. I am currently waiting the arrival of my 16K RAM and then I will be able to really get into some clever material!

John Mitchell,  
Christchurch,  
New Zealand.

## COULD YOU BE A WINNER?

To turn your games program into a household name you need to be four kinds of expert.

You'll need to be an expert programmer and inventive designer in the first place.

Then there's the question of the manufacturing expertise necessary to ensure the quality of the tapes will give the best possible load for your prospective purchasers.

Marketing expertise will help put the best package around the tape and make sure that the program gets maximum exposure in the right media. Advertisements must be designed for real impact and a knowledge of which specialist press to place them in, would be handy.

And how about distributing the cassettes once the purchaser's appetite has been whetted. Getting them into the computer dealer shops, setting up a mail-order system.

Never realised how much work these software houses have to put in eh?

Well that's the promise we are tethering to our new **Games Program of the Year Competition**.

Starting in our December issue we are carefully sifting through your games listings, looking out for that program we consider to be something special. And come next November we will take the writer of the best games program we receive and hawk both him and his program around.

We will take him to a top software house and get their advice on tidying the program up, securing it against software pirates, giving it that final professional polish.

We'll have a top audio company brought in, to bring out the copies of your tape in prime condition ready for loading.

The next stage in the program hype will be to have a marketing company design an advert and advise on cassette packaging. Our top reviewers will help compose the instructions on the inside leaf of the packaging.

And then we'll throw the entire weight of *Computer and Video Games* behind the program and an advertising campaign in other com-

puter magazines aimed at giving it maximum exposure over the whole marketplace.

We'll have the cassette distributed, set up a mail order system to deal with its sale. And at the end of the month, having fully emerged our winner in the tricks of the trade and given his cassette the sort of treatment even top software houses would struggle to equal *C&VG's* top programmer will be able to sit back over Christmas and wait for the money to come rolling in.

So start work on your next contribution to our games listing pages as soon as possible... after-all last year's winner, Nibblers, was published in the very first issue!

## MEET ARKRAIDER THE DUSTMAN

Our readers' special game of computer moderated space thrills, *Starweb*, is still producing thrilling reports of galactic intrigue.

This month we publish one we received from one of the universe's more distinguished beings, Arkraider the artefact collector. His tale of space pirate harassment of the galactic innocents is narrated by Jenny Parsons.

It's a hard life for a bumbling old fossil like me, you know, trundling around the universe collecting up unattended artefacts. Well, if others are careless enough to leave them lying about...

By the way, I'm Arkraider, archaeologist extraordinaire — a sort of galactic dustman. My sole aim is to load rare treasures on to my somewhat battle-scarred and

dilapidated fleets and creep off to some planet where I can gloat over my acquisitions.

Trouble is, there are constant interruptions. Pirates! Dastardly bands of do-badders, always plundering, more evil than Long John Silver and Captain Hook combined.

The universe is plagued by an overdose of bad guys. Berserkers, intent on blowing my world to smithereens and sending vast hordes of rampaging robots to terrify my peace-loving people. Empire Builders, fiendish, power-hungry magnates on perpetual ego-trips. They remind me of the American Presidents on Earth, years ago...

But, I digress. There are some half-way decent chaps about. Merchants, for example. Hyperspace hypermarketeers, these are relatively harmless.

Mind you, like all salesmen, once they get their foot in the door... The Apostles are pretty bearable too, although, when I arrive home after a gruelling voyage, to find my people in the grip of religious mania, it becomes very wearing.

I've had some experiences in my time. Once I found a wonderful prize, the fabled and mystical Black Box! Imbued with legendary powers, was I in luck? No, I wasn't. It disappeared, before my incredulous eyes. Vanished into the great void. On more than one occasion I've been ambushed en route to some fabulous jewel and left for dead.

What's that you said? The Ancient Pyramid has been sighted on the other side of the galaxy? I'm off!

## TIM THE INVENTOR'S FOUR-WHEELED WINNER

Buggy is a design for a machine code arcade-type game requiring skill and quick thinking.

It is the invention of Tim Selkirk of Bunny in Nottingham and was judged to be the pick of the bunch of program ideas sent in by you for our September Design a Sinclair Program Competition.

Tim has won for himself a set of five ZX81 Psion cassette games and a Sinclair printer.

He has also earned the chance of a trip down to London to look around Psion's software house and see their game design team in action and talk about Buggy with them.

Charles Davis of Psion, who was part of the judges panel who checked over the entries for the competition explained the strengths demonstrated by Buggy.

"We felt Buggy deserved to win because Tim had considered the practicalities of putting his game onto a computer, in some detail.

"He clearly appreciated what could and could not be done and went further and suggested details of the application. He has developed the makings of an amusing and exciting game. The presentation is excellent and Buggy certainly has a realistic potential."

The Buggy in the title, moves over a scrolling landscape which includes a series of water jumps. The track is produced randomly at the right-hand side of the screen and by changing gear and speed the car manoeuvres over the terrain, picking up speed for the water jumps.

Although the idea sounds similar to one of the current arcade games,

its way of coping with the jump problems is quite original and Tim has gone into some depth working out the best way to approach the problems involved in the game.

Buggy sounds a fascinating game, and if anyone out there would like to try and use Tim's many diagrams, flow-chart and extensive thoughts on the game, to turn it into a working program, please send a stamped addressed envelope into us and we will dispatch a copy of Buggy rules to you.

Four runners-up in the competition will also receive the five Psion ZX81 cassettes as a prize.

The runners-up are: Maggot Mania by Paul Dobson; Hang Glider by Bernard Isherwood; Tightrope Walker by D.M. Harris; and Strategic Command by Ben Bryant.

## PUZZLING SOLUTIONS

We thought we'd catch a few of you out with our sneaky Mastermind Competition in November but you were up to the challenge.

The vast majority of entrants spotted that Puzzle C had been altered to make it possible.

First three out of the hat with all four answers correct were: George Stout, The Walk, Potters Bar, Herts; Ivor Davies, Bryn Road, Brynaman, Dyfed, and Robert Funai, Craig Court, Girvan, Ayrshire.

Congratulations and Invicta Electronic Masterminds are on the way.

If you can shoot down the invaders

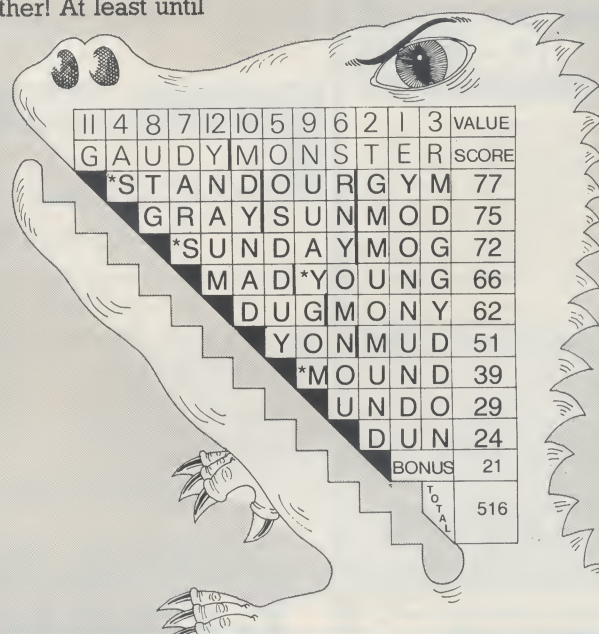

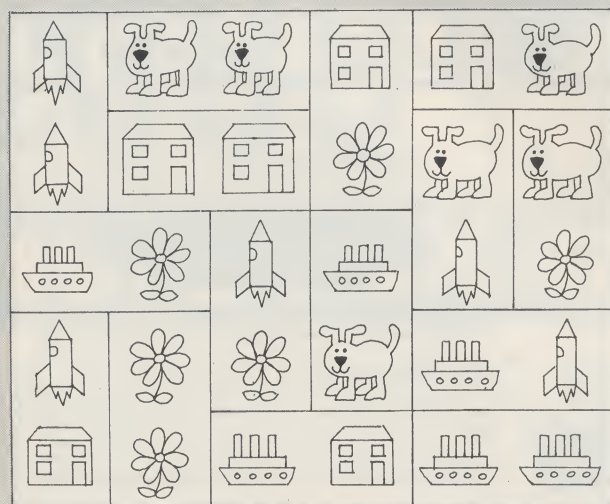

in Space Attack on this month's Puzzling pages, you could win a Computer Games' hand-held space invader game. We want your entries in by January 14th at the latest and the first three with the lowest possible solutions will receive the prizes. Full details on page 72.

Right, for those of you who complained that they read the November issue's Puzzling answers before they got a chance to try the puzzle... read no further! At least until

you have glanced at our Gaudy Monster and Omnidose brain-teasers.

If you're still with us I assume you have already looked at pages 72 and 73. Here is a sample solution for Gaudy Monster which scores 516 points, let us know if you have a better score.

And left are the dominoes, successfully pieced together from Mr Wheel's diagram.

## 800 16K RAM

Sensational  
new **LOW** price

Here's a tremendous opportunity to trade in your old Micro Computer at SPECTRUM and take a full £40 off the price of the superb ATARI 800. Yes, for a strictly limited period, SPECTRUM will allow £40 for any micro, your ZX-81 (or even your IBM!) etc., whatever the age whatever the condition, when traded-in against a new ATARI 800. The ATARI 800 features a typewriter keyboard for fast and easy data entry. It has a 16K memory that can be easily expanded to 48K with convenient, slip-in ATARI Memory Modules. So you have more power available to run more sophisticated programmes. The ATARI 800 is expandable which means you can build the computer system you want today, knowing that it will grow to meet your needs tomorrow. You can add printers, programme recorders, disk drives and more. Call into your nearest SPECTRUM centre and ask to see the ATARI 800 today.

### Up to £1000 INSTANT CREDIT with a SPECTRUM CHARGECARD

With a SPECTRUM CHARGECARD you choose the credit limit to suit YOU. e.g. a monthly payment of £10 gives you £200 credit. Ask your nearest SPECTRUM COMPUTER CENTRE for written details on how to apply for your SPECTRUM CHARGECARD - NOW! (Typical APR 30.6%)

### COMPUTER DEALERS!

(or prospective Computer Dealers!)

If you would like to know more about becoming a SPECTRUM APPOINTED DEALER on an exclusive area basis, please contact MIKE STERN or ALAN WARREN on (07073) 34761  
Spectrum (U.K.) Ltd., Burrowfield, Welwyn Garden City, Herts.

### V.A.T.

You will see that we quote our prices both including VAT and excluding VAT - no hidden 15% to suddenly up-lift your bill but also making our prices easier to compare with our competitors.

### MAIL ORDER

When it comes to MAIL ORDER our service is FAST! with SECURICOR DELIVERY to anywhere in the British Isles. - Ask your nearest SPECTRUM dealer for further details at time of ordering.

*'News Sire! The alliance between the Water Empire and the Sun Beings has crumbled, war is declared.*

*Three of your fleets are currently in Water Empire systems encircling sun-rich Rolek, this could be the chance you have yearned for. Other tribes affiliated to the Water Empire also feel the time is right, shall I give the orders to grab our share of Rolekian plunder?*

The galaxy of the Seventh Empire is torn by war and piracy. The merchants are as coldly calculating as the war fleets. Playing off warring empires against one-another, a cunning commander can keep his tribe in

profit. But he must keep a close eye on the way the diplomatic wheels are turning, how other tribe's fleets are responding.

He must know when to plunge into the risks of battle and try to alter the galactic map and he must use the Gateways wisely, running merchandise or raiding the profitable routes.

The Seventh Empire is a new way to play a game. It is quite unique in the history of publishing, computing and gaming. This one-way play-by-Mail gaming is the brainchild of Mike Singleton who runs Britain's top computer moderated game, Starlord.

The players send in orders for

their fleets by post but get feedback through the pages of this magazine and it can cater from two to 10,000 players. At our end it's run by a Pet computer and all the player's orders are input into it each month.

It works out how their interaction affects the galaxy's 100 centres of population and industry. The result is displayed in the following month's issue by use of a map showing how the fleets have moved. This is not information on each individual fleet but the numbers to be found on each star and how that has altered its trade index. With a diplomatic diagram showing how the empires are shaping up for war;

a Gateway route table displaying the profits on each route and some battle reports from the areas of galactic conflict, the player can find out exactly how his fleets fared and plan out his next movement commands.

The rules are set out briefly here, but each Seventh Empire player will be sent a detailed rulebook before the game gets underway in our February issue. You'll find it easy to understand the rules and simple to play but very difficult to win and work out tactically. Remember, there is no luck in The Seventh Empire — only foresight and galactic understanding! An entry form is on page 4.

# THE SEVENTH EMPIRE

There are a 100 named stars in the galaxy, arranged on a 10x10 square grid, representing major centres of galactic society.

Each star system belongs to one of seven empires: Water (blue), Bloodline (red), Sun (yellow), Amythest (purple), Dead (brown), D'Taan's Science Empire (green) and the Pirate Empire (orange).

There are four types of stars: **Gateway Stars** provide rapid transgalactic movement; **Energy Stars** contain planets rich in the stellar energy used for ordinary inter-system space travel; **Gem Stars** produce the amythest-like crystals which are used to harness stellar energy; and **Elixir or Life Stars** contain the sun polyps which can turn unusable planets into those capable of supporting life.

Each player has seven star-fleets under his control and each of these is considered the property of the empire from whose star it starts its turn. A player can have starships in as many empires as he wants and by sending these ships on missions from star-to-star, he tries to build up his profits.

## GAME TURNS

A simple turn sheet must be sent in by the player, every month which records where he wants his fleets to travel to. And whether each one should be involved in battle, piracy, trade, raiding or just moving from star-to-star.

These orders are processed by computer so that all movement happens simultaneously. A printout of the galactic map is produced, each player's individual record updated and the winner of that turn found.

From the information given in that issue of the magazine, the player can calculate what happened to his ships and what profit he made.

You should keep a copy of your moves for this purpose. The computer keeps its own records but if you miscalculate, you could be playing with delusions of grandeur.

## STAR TYPES

The four star types are represented by different symbols on the galactic map and each has a trade value: Gateway Star = 50, Energy = 100, Gem Star = 150 and Elixir Star = 200. Each star is in a square on the map, the colour of the square indicates which empire it belongs to.

Stars represent whole systems which have been colonised and each of the 100 is considered by traders to be specialist at providing one of the four galactic commodities which produce real profits. A symbol shows which star type each is.

The star name is what you should use in your orders to show how you intend to move. Other data on the star includes the number of ships in that star system at the end of a turn (bottom left). And in the bottom right

is a number representing the **Trade Index** of the star for that turn, from which you calculate your profits (see example).

## AT WAR

The seven empires are continually at war with one another. This is represented by a **diplomatic diagram** concocted of seven different coloured circles. It will be printed each month to show the empires at peace and those at war.

When two circles are joined by a line, those empires are at war with each other the following turn. Two empires, whose circles are not joined are at peace with one another.

The diplomatic diagram changes according to the last turn's events. Every empire checks on how many ships from each of the other empires, raided its stars. It then declares war on the empire which did the most raiding of its territory.

This empire responds by declaring war also. If there are two empires guilty of equal raiding then war is not declared. Careful study will help here.

The diplomatic diagram is important because it restricts the moves a player's fleets can make on the following turn. Trade and Movement cannot occur between stars of two empires at war.

Likewise, a fleet cannot be given an Attack order that moves it between the stars of two empires at peace.

## MOVING OUT

Each game turn consists of two movement phases. In each movement phase you can move any or all of your fleets, so each ship has up to two movement orders. There are three basic ways to move.

1) **Travel Mode:** A fleet moves to any adjacent star, horizontally, vertically or diagonally. This mode is used in Trade or in Movement. This mode takes one phase to complete.

2) **Attack Mode:** A fleet moves to any adjacent star, horizontally or vertically **but not diagonally**. This mode is used in Raid or in Attack. This mode takes one phase to complete (see example).

3) **Gateway Mode:** A fleet moves from any Gateway Star to any other Gateway Star. This mode is used in Cargo (gateway trade), Jump (gateway movement) or in Plunder. Unlike the other modes of movement, this mode takes **two** phases to complete.

## TRADING

The star Trade Index is the key to most profit in the game of The Seventh Empire.

Each star is given a fresh Trade Index each turn. A number of factors come into the calculation. Let's consider one star:

1) The total number of fleets leaving the star on Trade missions on both phases of the turn is the number of Buyers.

- 2) The total number of fleets arriving at the star on Trade missions on both phases of the turn is the number of Sellers.
- 3) Each star already has a Trade Value by virtue of its star type.
- 4) Trade Index = Trade Value × Buyers ÷ Sellers.

The trade index is used when calculating the profit to be made on a Trade mission. Trading from star A to star B:

$$\text{PROFIT} = \text{TRADE INDEX B} - \text{TRADE INDEX A}.$$

If you go from a star with a low Trade Index to a star with a higher Trade Index, you make a profit. If you do it the other way round, you make a loss! (see example.)

Gateway trade (**Cargo**) does not influence the Trade Index and profits on this are calculated differently. You can still do ordinary Trade with a gateway star, however.

On each turn, an overall Raid Penalty is announced. It is used in calculating losses due to damage during a raid on an alien empire's star. It varies according to the number of players in the game, we will announce it each issue.

## BATTLE ORDERS

Battles will be rare each game turn, but some obvious targets will present themselves each month. And, if successful, these can change the galactic map.

A fleet travelling from its empire to a warring empire can be given an Attack or Raid order. If an Attack order is given on the first movement phase, no subsequent order can be given to that fleet.

A fleet can only be given an Attack order on its second movement phase if it stayed in its own empire on the first phase. In both cases the Attack mode of movement is used. Fleets on Attack orders stay at the star they attack (see example).

The result of an Attack is calculated as follows:

- 1) Defending ships = number of owning empire's ships at end of turn.
- 2) Attacking ships = number of alien ships from all empires there on Attack orders from both movement phases.
- 3) The defender's ships are compared with the attacker's ships. Whoever has the most, wins. In the cases of a draw, the defender wins.

All the fleets of all the attackers and the defenders become the fleets of the victor. Any fleets from the losing empires

lose all their profits. Fleets on the victor's side gain an additional Battle Bonus.

## FLEET ACTION

As well as moving between stars, a fleet is also given an Action order. These are as follows:-

Move — no action, just movement.

Trade — taking goods from one star to another.

Raid — plundering an alien empire's star.

Return — returning from a raid to own empire's star.

Attack — moving to an enemy empire's star for battle.

There are also the following actions which can take place when using the Gateway Mode of movement:-

FUNUS ♡ 13 808	LULIP ♦ 79 400	YANOK ♡ 48 458
VEPOZ ♡ 68 600	QATOT 0 16 600	HEZOD * 72 112

Fig. 1

Fig. 2

	1st Movement	phase	2nd Movement	phase
	DESTINATION	ACTION	DESTINATION	ACTION
FLEET 4 AT: Lulip	Qatot	Raid	Lulip	Return

In the example above are six star systems. These are six stars in close proximity whose solar systems are capable of supporting life in such quantity that the system is considered a trade centre.

The Hezod system in Fig. 1 is a Gateway star represented by the asterisk in the centre. The 72 number represents 72 fleets currently based on planets in the system and the Trade Index is 112 for this turn.

Funus and Vepoz are both Elixir stars (represented by the heart symbol) so no trade can take place when a ship moves between them. In travel mode it is possible to move between Hezod and Funus. The first movement phase will take your fleet to Lulip. And then onto Funus in the second movement phase.

Funus, Lulip, Yanok and Hezod are all in the

Jump — no action, just movement.

Cargo — taking special goods on a particular route.

Plunder — piracy on any ships on the same route.

Trade orders can be given to any fleet moving in Travel mode between two stars. The profit made by this action is calculated by subtracting the trade index of the star the ship is leaving from the trade index it is going to. For example, going from A to B:-  
Profit = Trade Index B - Trade Index A

Trade orders cannot be given to a fleet travelling between two stars of empires at war, nor can they be given to a ship travelling between stars of the same type.

Move orders can be given to any fleet moving in Travel mode be-

tween two stars. No profit or loss will be made. Move orders cannot be given to a fleet travelling between two stars of empires at war.

A fleet travelling from a star of its own empire to the star of an alien empire can be given **Raid** orders. It must use the Attack Mode of movement and the Raid order **must** be given on the first phase of movement. On the second phase of movement the player **must** give a **Return** order to the ship, in which it must go to a star belonging to its own empire.

Profits are calculated as follows:-

T = Trade Index of raided star.

F = Fleets at raided star at end of turn.

R = Raid Penalty.

Profit = T - (F × R)

Bloodline Empire. If a ship at Funus wants to attack Qatot (Water Empire) it must travel in **Attack Mode**. It cannot go diagonally, so must pass through Lulip first. Even though Vepoz is in the Dead Empire and this is currently at peace with the Bloodliners, that empire will not allow an attacking Bloodline vessel to pass through its system on the way to attack Qatot. If a Lulip fleet wishes to **Raid Qatot**, its first order will be **DESTINATION: Qatot. ACTION: Raid**. Its second movement phase will consist of **DESTINATION: Lulip. ACTION: Return**, (figure 2).

Qatot has an Energy star trade value of 100. 12 of the 16 ships which are there this turn are Buyers and only two ships left to sell. So the Trade Index for Qatot this turn is  $100 \times 12 \div 2 = 600$ . But a ship arriving from Vepoz which also has a trade value of 600, will not make any profit on the trip as  $600 - 600 = 0$ .

**Return** orders can only and must be given to a fleet which has just made a raid. It is like a Move order, carrying no profit, but it must be made on the second phase of movement and movement must be in Attack Mode. It must also be made to a star of the same empire as the star the fleet started its turn at (see example).

**Battles** can either profit the defender or the attacker. Fleets on the losing side lose all profits. Victors gain an additional bonus. Bonus = Losers' total profits/number of winner's fleets.

The Battle Bonus will be noted for each turn in the Battle Reports section.

If an attacker wins then each fleet profits as follows:-

Profit = Trade Index of star

attacked + Battle Bonus

A **Stay** order is just that, staying at a planet. Any illegal order will be changed to a stay order and no profit gained.

Stay orders have no effect on trade or profits but may effect battle.

## GATEWAYS

A fleet moving in Gateway Mode between two stars can be given **Cargo** orders. This order has nothing to do with the normal Trade Index of the Gateway Stars. The profit is calculated as follows:-

Profit =  $1000/\text{Sqr}$  (number of fleets using same trade route).

If the route a fleet is taking is Plundered all profits are lost.

With **Jump** orders no profit or loss is made — it simply moves!

A fleet moving in Gateway Mode between two stars can be given **Plunder** orders. If any other fleets are trading on the same route they lose all their profits. If no ships are trading on the same route then the Plundering fleet gets no profit. Any profit from piracy is calculated as follows:-

Profit = total traders' profit/number of pirates on route

The **Gateway Route Table** is a reference guide to the profits made by taking a particular gateway-gateway route. The star of departure is given by the row and the star of destination is given by the column. Cross-referencing these, you will find the box corresponding to travel between those two stars in that particular direction. This is the gateway route. The box will show one of two things:-

(1) Black figures on white background = Gateway Trade Profit — no pirates on route.

(2) White figures on black background = Pirate Profit — the profit each pirate on the route makes. Traders get no profit.

Each empire is run by vast computers, crossing the galaxy in huge ships which react to the data the tribes put into them. They are invulnerable and, if at a star, that star cannot be taken in battle. They do not trade, battle or raid and can never end their turn in an alien empire's system.

Any fleet ending its turn at the same star as an Imperial Ship will have its profits doubled.

The richest player in each empire takes control of the imperial ships that turn. But there is one condition, the only players considered are ones whose fleets all belong to that empire.

# NEW PRODUCTS NEW PRODUCTS NEW PRODUCTS NEW GAMES NEWS

## SAVE THE FINAL FEW HUMANOIDS

### ABDUCTOR

The aliens are out to capture the last six remaining humanoids on planet X and it is your task to stop them.

They swirl down towards you looping-the-loop — like bugs hovering around a lamp shade — and then swoop down and grab one of the humanoids.

The humanoid is then carried dangling from the alien craft up towards the top of the screen where he comes to a sticky end. The aliens having extracted all the vital organs for experimental purposes then toss the skull down towards the planet's surface.

The aliens attack in five waves. If you manage to survive to the fifth wave you are awarded an extra gun — which you will need as the aliens multiply in numbers and also become much faster and difficult to shoot.

When the last humanoid has been abducted that marks the end of the human race so you are charged with a weighty task.

Abductor runs on an unexpanded Vic-20 and is the latest addition to the Llamasoft range of software for the Commodore machine.

It sells at £6.00 inclusive from the Hampshire-based firm.

## MISSION TO FIND THE GATEWAY . . .

### TIME GATE

A four dimensional game is the manufacturer's proud boast on the cover of this latest space game for the Spectrum.

Your mission is to travel back through time to destroy the enemy before they hatch their evil plot of intergalactic tyranny.

The game displays the view from the cockpit as your ship hurtles through space past stars,

planets, galaxies and ultimately towards the Time Gate.

Once through this you can attempt to shoot the aliens who appear momentarily in front of you.

You are armed with photon torpedoes which you must fire at the aliens to destroy them.

The ship is equipped with impressive flight and battle control computers.

Short range radar enables you to train your photon torpedoes accurately on the aliens.

Long range radar shows you the number of aliens in any given galaxy and their positions.

There is also a jump drive which enables you to race through time.

The game comes complete with a keyboard overlay to simplify the playing buttons on the computer.

The ship's computer records the level of damage sustained and the number of aliens downed. There is a lot to concentrate on so only experienced space pilots need apply.

Time Gate is the latest game from Quicksilver of Southampton. It runs on a Sinclair Spectrum in 48K and costs £6.95.

## IMPROVING YOUR TUNNEL VISION . . .

### 3D TUNNEL

3D Tunnel is the latest offering from 3D expert Malcolm Evans, the man behind 3D Monster and 3D Defender — the J. K. Greye games that have sold more than thirty-thousand tapes between them.

The 3D effect is created by a sequence of ever decreasing squares which your craft passes through, creating the effect of depth as the squares appear to disappear into the distance on your screen.

As you pass through the tunnel a number of adversaries will attempt to stop you. You will have to deal with rats, bats, rabbits and even an express train hurtling towards you from the depths of the tunnel.

You can shoot these obstacles or try to dodge them.

3D Tunnel runs on a Sinclair Spectrum in 48K or 16K and is available from New Generation Software of Bristol at £5.95.

## THIS COULD BE A REAL BOA!

### SNAKES

Snakes introduces you to a wriggling maze of the colourful but deadly creatures. You are in control of a grinning blob and using this you must outwit seven menacing snakes which wriggle and twist around the screen.

At the start of the game, the screen is filled with tiny eggs which your blob must consume

to score points. The snakes are walled in by lines of eggs but these are soon consumed by the red snake thus releasing the other snakes.

The action is now fast and furious as the snakes chase after you hungry for a nice juicy blob. When all the eggs have been consumed phase two of the game commences.

Now it is the turn of the blob to get its revenge as it can now eat the snakes. To do this it must land on a snake's tail from whence it will chomp its way along the entire length of the snake to gain 200 points.

The blob is moved using either a joystick or the keyboard.

Snakes runs on an unexpanded Vic-20 and is the latest addition to the Postern range of games. It is available from the Cheltenham-based company at £6.99.

## THE ACTION PACKED PACKAGE!

### GAMES PACK 2

Three games for under a fiver is this latest value-for-money package offered for the ZX81.

The games are all action packed — City Bomb places you on a bombing raid over a deserted city with the mission to destroy as much of it as possible.

3D Battle places you at the cockpit of Starblazer Cruiser hurtling through space at the speed of light. You are attacked by alien death ships which are spinning towards you intent on your destruction.

Gridball is a two player type tennis game — with both players operating their players with the keypad control keys. The cassette is available from JRS Software of Worthing at £4.95.

## COME FLY FASTER WITH US!

### ASTRO CHASE

Astro Chase adds a number of new features to the space war type game.

You are the astronaut aboard an inter-galactic spacecraft and the aliens are attacking.

But they are not just attacking from the space immediately around your planet but from throughout the entire universe.

This greater distance necessitates the simulation of greater flight distances created by the innovation of something called Single Thrust Propulsion. This enable the ship to fly fast over great distances whilst still able to manoeuvre and fire at the attackers.

Astro Chase is a recently imported game from the U.S. for the Atari 400 or 800. It is sold in this country by Gemini Electronics of Manchester at £19.95.

Also new from Gemini this month is a 3D driving game called Baja Buggies.

You are driving across the desert steering to avoid the oncoming traffic.

The road weaves its way across the yellow sand as the sun blazes away in the sea blue sky. The screen also displays the speedometer.

The game requires 16K of memory and costs £19.95.

## JOIN BILBO ON HIS DRAGON HUNT

### THE HOBBIT

The Hobbit — J.R.R. Tolkien's masterwork of imagination and lyrical prose has been converted to the computer.

Your mission is to seek out the evil Dragon and return the treasure he hoards back home.

As a secondary concern, you must look after Thorin the Dwarf and protect him. Should he be killed during the adventure, it is most unlikely you will be able to

survive the dangers ahead of you.

You will meet many of your favourite characters from the book including Gandalf, Thorin, Gollum, the Elves, and many others. Each of these characters has the ability to make decisions, interact, and communicate not only with the player but also with the other characters.

The program is part graphic part Adventure game.

The Hobbit runs on a Sinclair Spectrum in 48K. It comes complete with a full colour instruction manual and a copy of the book, *The Hobbit*.

The package is available at £14.95 from Melbourne House publishers of Leighton Buzzard.

## WHAT A LOAD OF RUBBISH!

### TRASHMAN

Trashman is the latest variation on the Pacman theme featuring giant flies, garbage and you as the unfortunate dustman with the job of clearing up all the mess.

You are a trash collector scouring the city streets to pick up the various garbage which is represented on the screen as a series of dots.

There are a number of added dangers for your dustman to be aware of. A super-breed of giant flies have sprung up feeding on the debris. These flies have grown to man eating proportions and are beginning to change their diet to include the local population as well as the garbage.

To fight the flies the council have invested in a fleet of remote control garbage collectors in the hope of removing the flies diet of garbage.

There are also six green trash cans placed around the city streets. If you pick up one of these the flies are temporarily weakened and you can run them over with your trash truck. But you will have to be quick as the flies are not weakened for long.

Occasionally a bit of bonus rubbish appears at the centre of the screen for which you can earn bonus points if you manage to pick it up.

Trashman is the new cartridge game from Audiogenic for the Vic-20. It is available at £19.95 from the Reading based firm or from any Vic dealer.

## DR. DEATH MEETS MR BOND

### SHAKEN NOT STIRRED

Secret agent 007 comes to the screen of your computer.

The game kicks off in true Bond style with an action packed scene in which a jet carrying a nuclear missile is stolen by the baddies. Your mission is to locate the missile and neutralise it.

The game introduces the evil Doctor Death who is holding the world to ransom.

The missile is hidden in a three dimensional maze in Doctor Death's under water lair.

The maze is patrolled by Paws who is Doctor Death's top henchman.

With sheer luck or Bond — like professionalism you may reach the missile control room. All you have to do now is crack the secret code.

Shaken but not Stirred runs on Sinclair Spectrum in 48K and costs £6.50 from Richard Shepherd Software of Maidenhead.

## MISSION TO DESTROY THE DEATH STAR SPACE WAR

There is a strong flavour of Star Wars in this latest game for the new Dragon computer.

You are at the controls of the sole-surviving star fighter on a mission to penetrate the Death Star defences and destroy it.

Enemy fighters are circling the Death Star and may blast you with their torpedoes at any time.

It is not only enemy fighters you have to worry about. There is also a black hole with a strong gravitational pull.

The space around the Death Star is littered with invisible space mines which can only be detected by listening carefully for a sonic alert which they will emit before they explode.

Space War is available from Microdeal of Bodmin, Cornwall, at £8.00.

# SOFTWARE FOR ALL

SOFTWARE FOR ALL presents programs for the people! Our list of original programs for the BBC, DRAGON, and SPECTRUM is growing every day! Reasonably priced. Ingenious use of programming. Excellent entertainment. These are the hallmarks of SOFTWARE FOR ALL.

Order now for fast delivery or visit one of our dealers. There's big things happening for all computer users... That's why we're called SOFTWARE FOR ALL!

**BBC MICRO**

**GALACTIC INTRUDER**

Fast arcade-type action game with Hi-Res colour and sound. Machine Code. 32K

**£6.95**

**J.R.**

Two player game, features include exploration, drilling, employment and Price Wars. 32K

**BBC MICRO**

**£6.95**

**PAIRS**

A computerised version of the original card game with Hi-Res graphics.

**£6.45**

**DRAGON 32**

**AREA RADAR CONTROLLER**

You're in the control tower at Heathrow and it's your job to control up to 79 aircraft, taking off, landing, or just passing through. VERY ADDICTIVE — HIGHLY FRUSTRATING!

**DRAGON 32**

**£7.95**

**BBC MICRO**

**POLAR BEAR**

Educational game for 8-12-year-olds incorp. simple maths tables.

32K

**£7.45**

**BBC MICRO**

**ROW OF FOUR**

Try to outwit your computer opponent in this game of skill. Great graphics. BASIC and machine code. 32K

**£6.45**

**ZXSPECTRUM**

**PHARAOH'S TOMB**

3D Maze Game and Adventure rolled into one! 48K

**£6.95**

**BBC MICRO**

**SPACE KINGDOM**

Battle your way around the Planets to become ruler of the Galaxy! Excellent use of graphics and sound. 32K

**£7.95**

**BBC MICRO**

**TIME TRAVELLER**

Travel through over 100 rooms in different times, and find the key back to your own time. 32K

**£6.95**

**BBC MICRO**

**Utility Pack 1**

Envelope program, variable print-text scanner and memory dump. 32K

**£7.45**

**BBC MICRO**

**CAR WARS/ALIEN PLANET**

Two addictive graphics games both BASIC and Machine Code.

32K

**£6.95**

**DRAGON 32**

**DANGER ISLAND**

An adventure game in which you fight your way through many obstacles to escape.

**£6.95**

**BBC MICRO**

**Utility Pack 2**

Disassembler, program crunch and text editor. 32K

**£7.45**

**BBC MICRO**

**ZOMBIE ISLAND**

Fight for survival on an island inhabited by hungry, dangerous cannibals. BASIC and machine code program.

32K

**£7.95**

**BBC MICRO**

**BEEBTREK**

Real time advanced Startrek Game. Extra facilities include "probe satellites", "damage reports" & "on-board computer".

16/32K

**£7.95**

# NEW PRODUCTS NEW PRODUCTS NEW PRODUCT GAMES NEWS

## METAL MEN OUT FOR YOUR BLOOD!

### ROBOT

Robot is the blood sport of the future. You are the human prey in this cruel entertainment.

You are pursued around an arena by a killer robot. If the robot catches up with you you are viciously done to death by being jumped on by three tons of mechanical gladiator.

The robot is also armed with a plasma gun which will not kill you outright with the first shot but weakens and slows you down. If you suffer more than a few shots it's all over.

In order to avoid a messy death you must reach the robot's remote control box situated in the bottom right hand corner of the arena and switch it off.

If you manage to do this you can open the door of the arena and stride out a free man.

Just to make things a little more interesting for the spectators and a little more dangerous for you the arena is covered with several hidden mines which will blow you or the robot to bits if you put a foot in the wrong place.

Robot runs on a BBC Model B and is available from Bourne-mouth based Viking Software at £4.95.

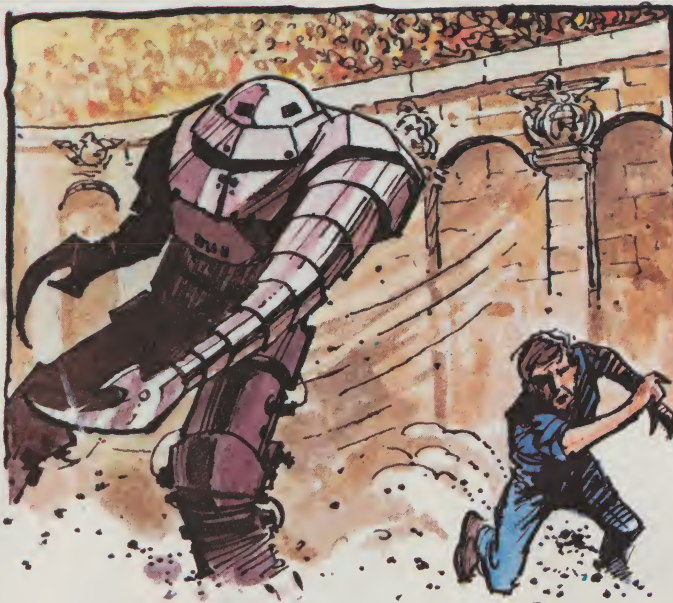

Also new from Viking this month for the BBC Model B is an action space game called Spacefight, a breakout type game called Break-Up and a two player game called Skwosh which will run on a Model A. The games cost £3.95.

## PROWLING THE MEAN STREETS . . .

### DEADLINE

Deadline is the latest crime solving mystery game to be imported from the U.S.

The package comes as a complete dossier of a crime committed on the 7th July 1982 when the wealthy industrialist Marshall

Robner died of an overdose of Ebullion — an anti-depression drug he had been taking for some time. But was it suicide or was it murder?

That's for you to work out and you have only twelve hours to do it.

You get a brown folder containing all the documentary evidence. This includes the Coroners report, a large black and white photograph of the scene of death with a white chalk line showing the position and outline of where the body had been found, a letter from Mr Marshall's Attorneys, the Inspectors casebook complete with excerpts from an interview with Mrs Robner, some fingerprints and an official memo, a lab report, and even samples of the tablets which were the cause of death.

Deadline became the number one best selling Apple game when it was released in the States in July.

The game is available in this country from Lancashire based Pete and Pam Computers. It runs on an Apple II and costs £39.25.

## HOT TIME IN THE OLD TOWN TONIGHT!

### FIREBIRD

A firebird is flying across the city setting fire to buildings and terrorising a defenceless populace.

You play the part of a fireman trying to extinguish the flames and rescue the inhabitants of blazing tenements.

In order to rescue the unfortunate victims of the bird from another world you have to climb a ladder to where the trapped people are screaming for help.

The game comes on cartridge for the Atari 400 and 800 and retails at £29.95. It is available from Manchester-based Gemini Electronics.

## FAMOUS FIVE BREAK OUT FOR BBC

### GALAXIANS

Five new arcade favourites have recently been launched by a new software house manufacturing exclusively for the BBC Model B.

A Galaxians cassette is on offer featuring four types of Galaxian swooping down individually or in groups of two or three.

The game features six skill levels, with a hi-score recorder which ranks in numerical order the various high scores of the session.

Bonus bases are awarded for higher scores although the game gets increasingly difficult — just as in the arcade game.

Space Fighter is a hybrid combining some of the best features of the arcade classics Scramble and Defender.

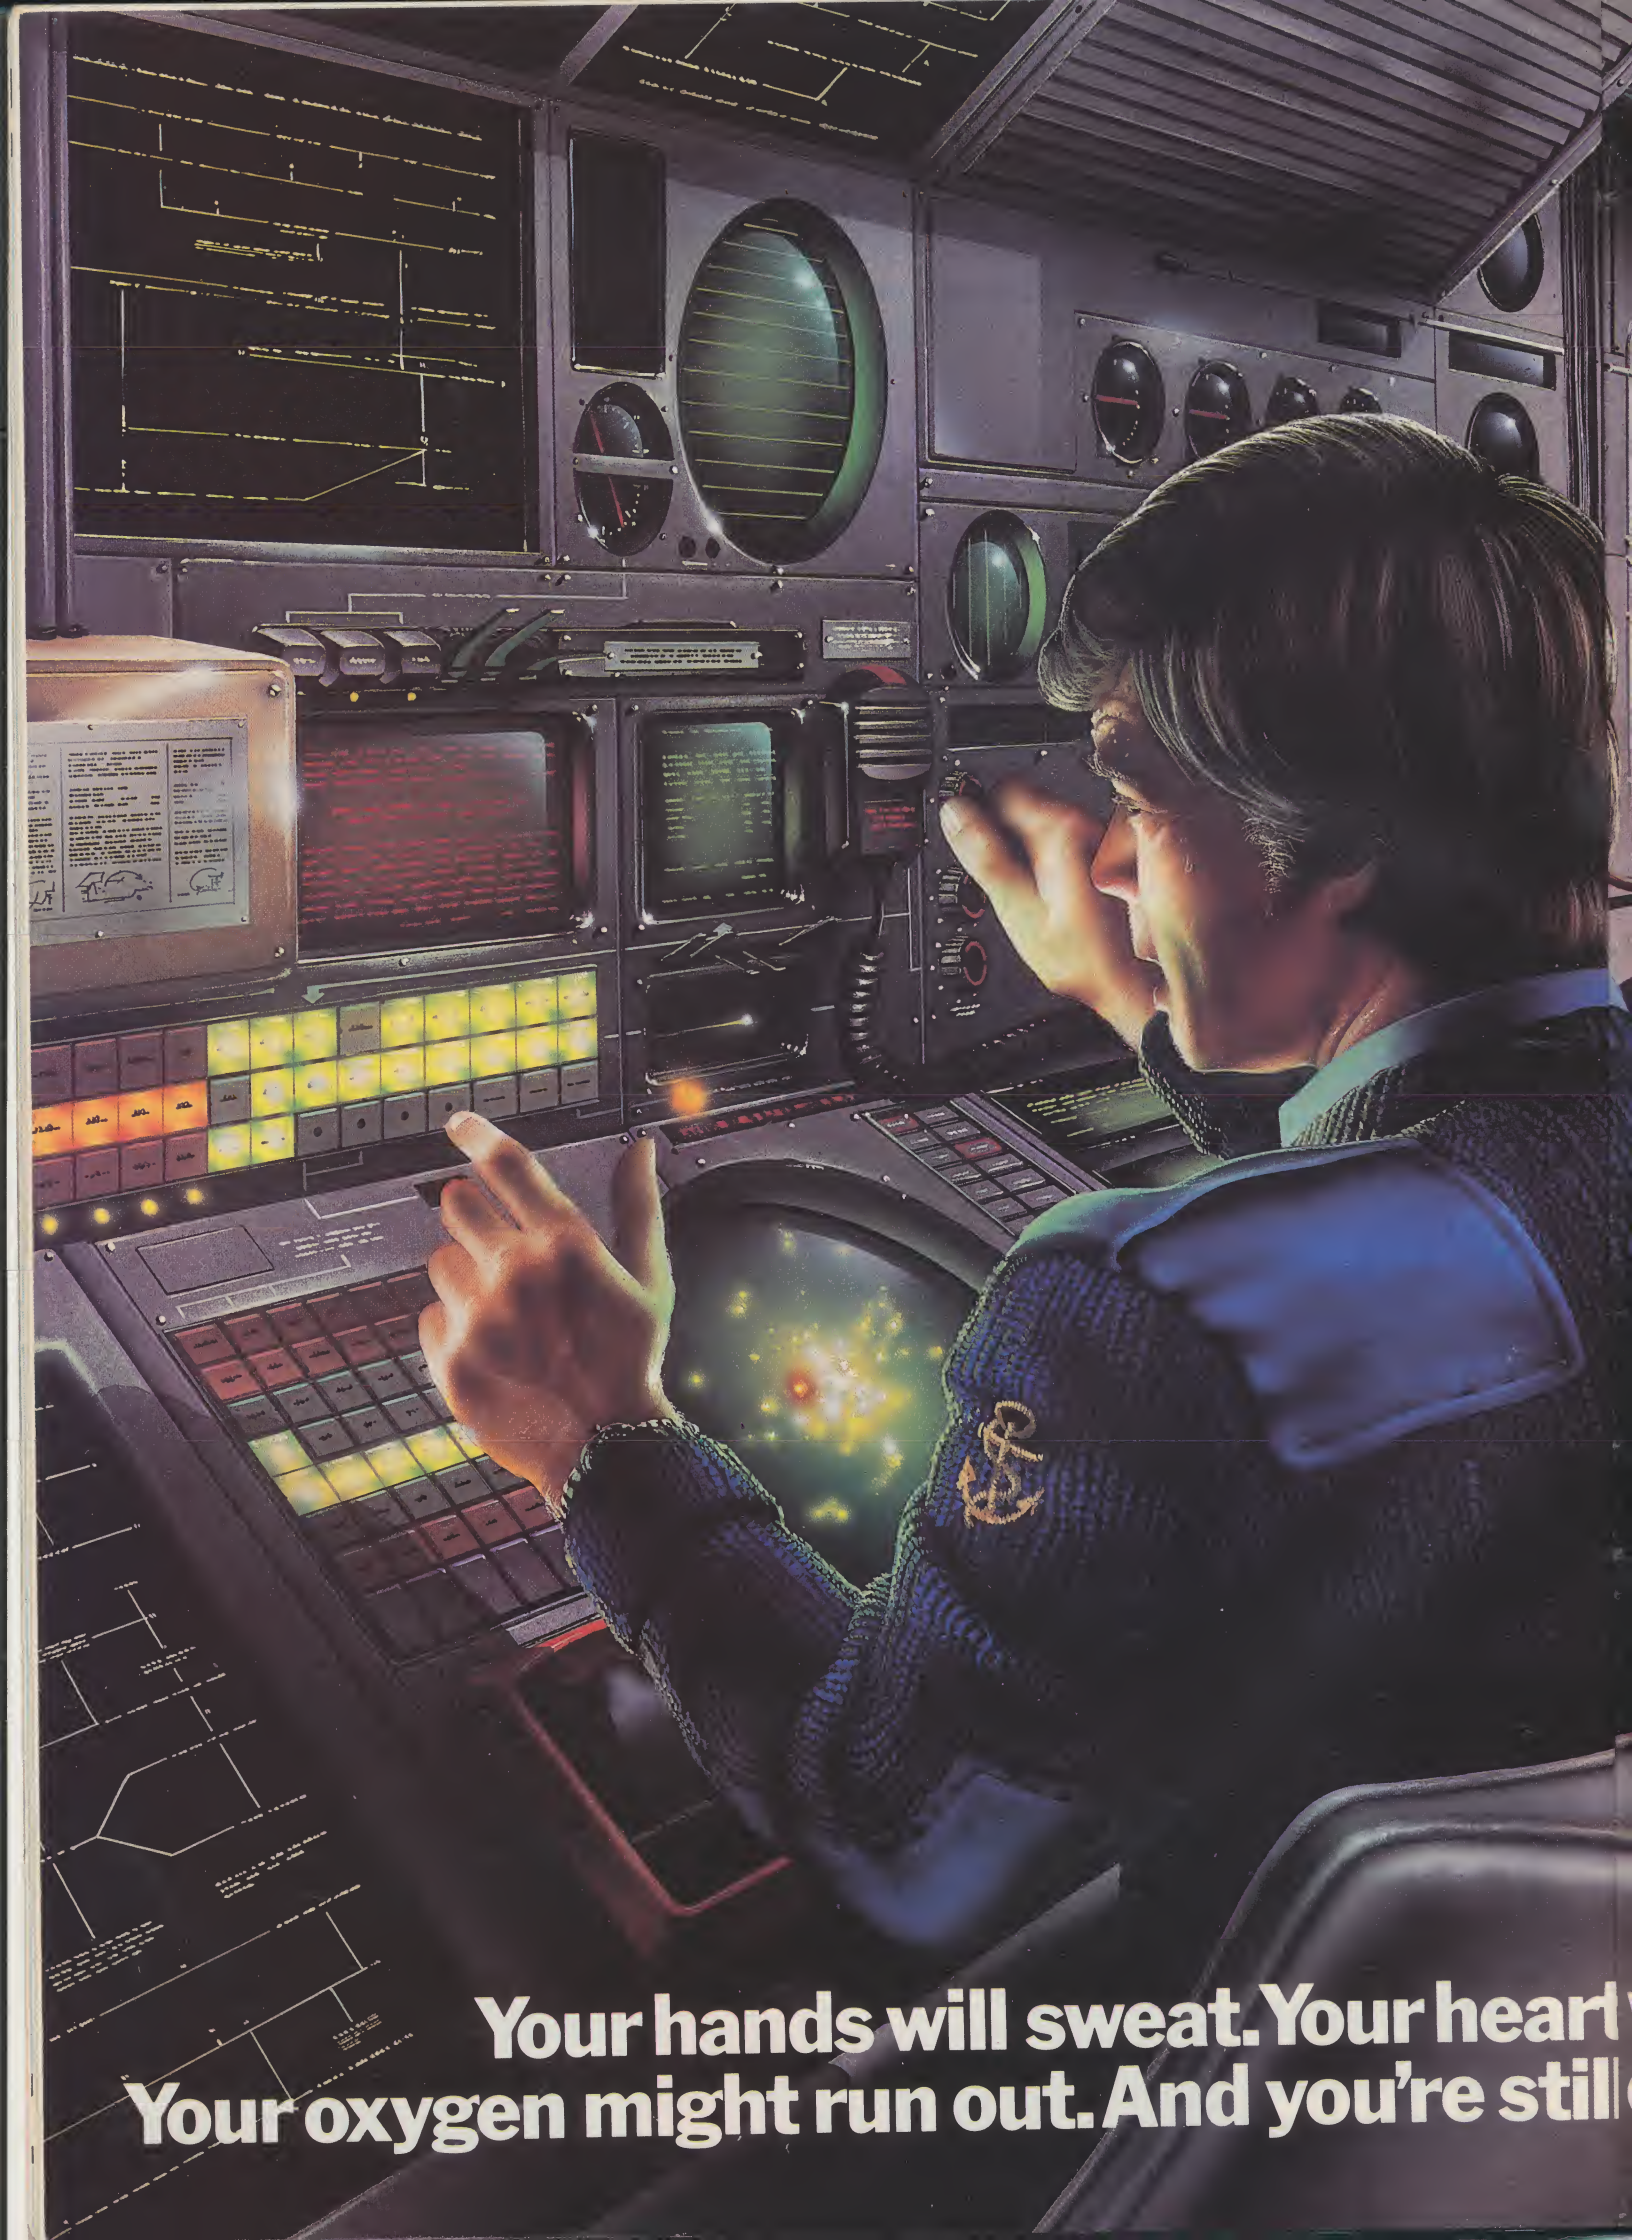

A souped-up version of Space Invaders is offered with a few extra features thrown in to add interest. The flying saucers for example drop powerful bombs which wreak untold havoc on your laser bases.

Centipede is also offered featuring many features of the arcade version — mushrooms, snails, flies, spiders, and the centipede itself.

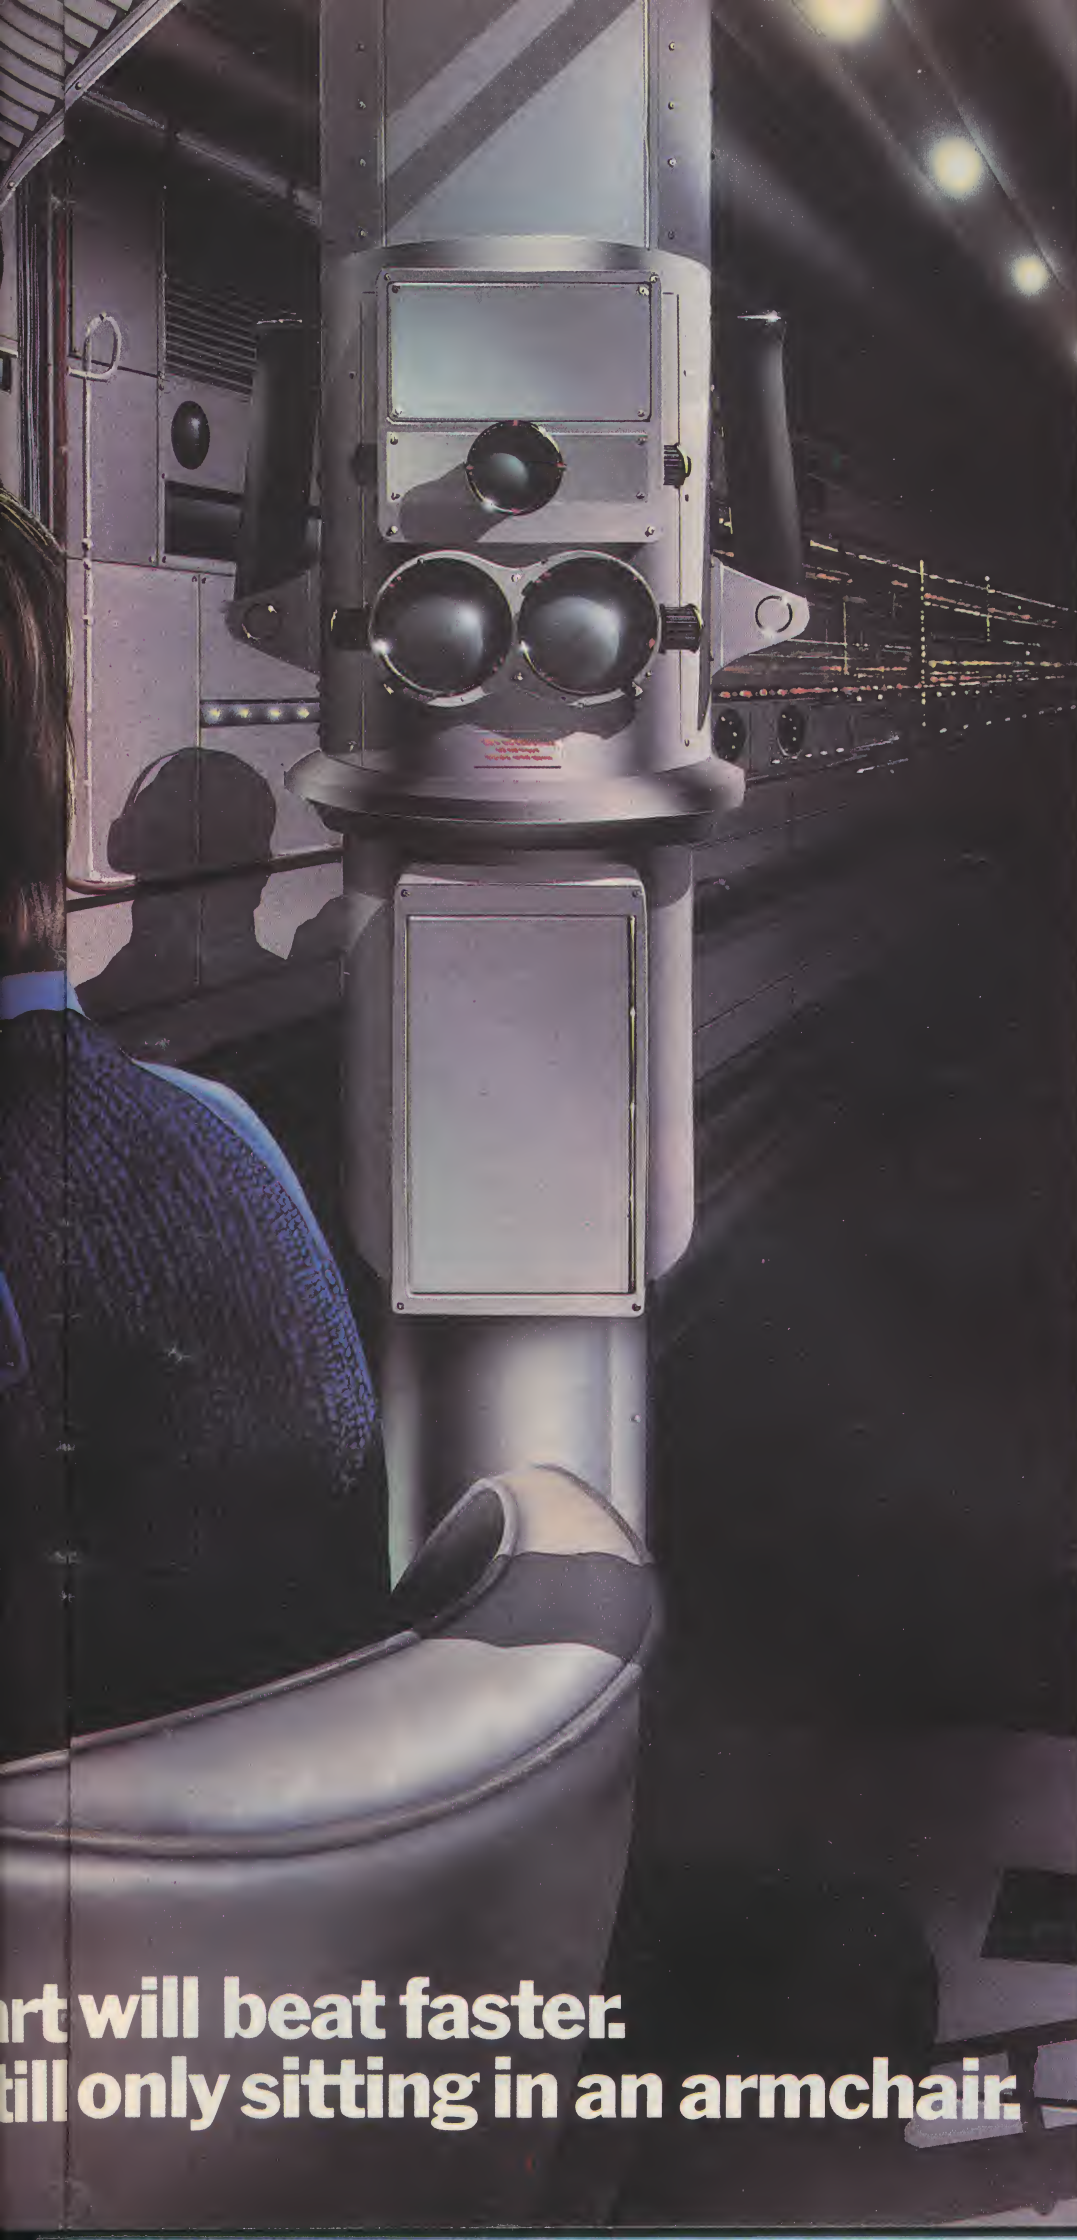

The games all run on the BBC Model B and cost £6.50 each or £5.50 each when you order two or more cassettes.

They are available from new Leeds-based firm, Superior Software.

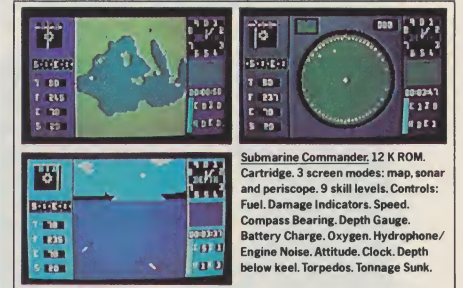

**Your hands will sweat. Your heart  
Your oxygen might run out. And you're still**

At seventy fathoms the only light comes from your Sonar, steadily tracking the advancing enemy fleet.

Suddenly they're above, dropping depth charges. You could dive. But how close is the sea bed? You could attack. But how many torpedos are left? And your oxygen. Isn't it dangerously low?

**Submarine Commander**, 12 K ROM.  
Cartridge. 3 screen modes: map, sonar and periscope. 9 skill levels. Controls: Fuel. Damage Indicators. Speed. Compass Bearing. Depth Gauge. Battery Charge. Oxygen. Hydrophone/Engine Noise. Attitude. Clock. Depth below keel. Torpedos. Tonnage Sunk.

'Submarine Commander' is one of 21 challenging new home computer games from THORN EMI, for use with Atari 400/800 or Commodore VIC 20. Like our 'Jumbo Jet Pilot' it's more a real-life simulator than a game.

But our programs aren't all work and no play. 'River Rescue', 'Kickback' and 'Soccer' are all-action games. 'Pool' and 'Darts' will suit armchair sportsmen.

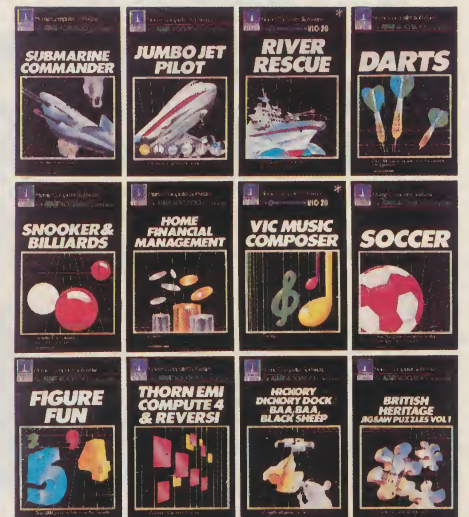

And whilst budding Beethovens play the 'VIC Music Composer', would-be Chancellors can work on their budgets with 'Home Financial Management'. We also have educational puzzles for children that will puzzle adults at higher skill levels.

But there's one simple idea behind all our titles. They're designed for players who expect more of a challenge from a video

game than creatures from outer-space can provide. Now, are you sitting comfortably?

**The world's greatest TV games.**

3.7 million reasons why the Atari Home Computer is something to see. The display screen used with our computers is composed of 192 horizontal lines, each containing 320 dots. Delivering colour and luminosity instructions to each dot for a second requires 3.7 million cycles...a lot of work for the normal 6502 processor.

That's why the Atari computer has equipped its 6502 with its own electronic assistant. It's called ANTIC, and it handles all the display work, leaving the 6502 free to handle the rest. What this means to you is uncompromisingly spectacular display capabilities without loss of computer power needed to carry out the demands of your program.

That's a quality you just don't find in ordinary home computers. And it's one of the reasons some computer experts say that Atari computers are so far ahead of their time.

There's more...which is what you'd expect from Atari Language. The Atari Home Computer uses several programming languages to give the user maximum control of its extraordinary capabilities. PILOT, Microsoft BASIC and Atari BASIC are understood and spoken by the Atari computer. You'll also find our Assembler Editor cartridge indispensable for machine language programming.

**Sound.** An Atari computer has four sound generators, or voices, activated by a separate microchip. This leaves the principal micro-processor chips free to perform other tasks. And you can take full advantage of this capability which is designed for easy programming.

**Change.** Atari Home Computers have been designed to make change and expansion easy. The Atari computer has a modular operating system that can be easily replaced as new technology develops. If you need it, memory expansion requires no more than inserting additional RAM modules.\* And the Atari ROM cartridge system also makes it easy to change languages. In short, your Atari computer won't become obsolete by future developments...because it already incorporates the future.

**Sharing.** To learn more about the amazing capabilities of Atari Home Computers, either visit your local dealer or fill in the coupon below.

# MICHAEL ORWIN'S ZX81 CASSETTES

The best software (by various authors) at low prices

## QUOTES

"Michael Orwin's £5 Cassette Two is very good value. It contains 10 stolid well designed games which work, offer plenty of variety and choice, and are fun."

*from the ZX Software review in Your Computer, May '82 issue.*

"I had your Invaders-React cassette . . . I was delighted with this first cassette."

*P. Rubython, London NW10*

"I have been intending to write to you for some days to say how much I enjoy the games on 'Cassette One' which you supplied me with earlier this month."

*E. H. London SW4*

" . . . I previously bought your Cassette One and consider it to be good value for money!"

*Richard Ross-Langley,  
Managing Director,  
Mine of Information Ltd.*

## CASSETTE 1

(eleven 1k programs)

machine code:

React, Invaders, Phantom aliens, Maze of death, Planet lander, Bouncing letters, Bug splat.

Basic:

ICing, Mastermind, Robots, Basic Hangman. PLUS Large screen versions of Invaders and Maze of Death, ready for when you get 16k.

Cassette 1 costs £3.80

## CASSETTE 2

Ten games in Basic for 16k ZX81

Cassette Two contains Reversi, Awari, Laser Bases, Word Mastermind, Rectangles, Crash, Roulette, Pontoon, Penny Shoot and Gun Command.

Cassette 2 costs £5.

## CASSETTE 3

8 programs for 16k ZX81

### STARSHIP TROJAN

Repair your Starship before disaster strikes. Hazards include asphyxiation, radiation, escaped biological specimens and plunging into a Supernova.

**STARTREK** This version of the well known space adventure game features variable Klingon mobility, and graphic photo torpedo tracking.

### PRINCESS OF KRAAL

An adventure game.

**BATTLE** Strategy game for 1 to 4 players.

**KALABRIASZ** World's silliest card game, full of pointless complicated rules.

**CUBE** Rubik Cube simulator, with lots of functions including 'Backstep'.

**SECRET MESSAGES** This message coding program is very tlp qexi jf.

**MARTIAN CRICKET** A simple but addictive game (totally unlike Earth cricket) in machine code. The speed is variable, and its top speed is very fast.

Cassette 3 costs £5.

## CASSETTE 4

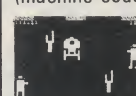

8 games for 16k

### ZX-SCRAMBLE (machine code)

Bomb and shoot your way through the fortified caves.

### GUNFIGHT (machine code)

### INVADERS (machine code)

### FUNGALOID (machine code)

### GALAXY INVADERS (machine code)

Fleets of swooping and diving alien craft.

### SNAKEBITE (machine code)

Eat the snake before it eats you. Variable speed (very fast at top speed)

### LIFE (machine code)

A ZX81 version of the well known game.

### 3D TIC-TAC-TOE (Basic)

Played on a 4x4x4 board, this is a game for the brain. It is very hard to beat the computer at it. 7 of the 8 games are in machine code, because this is much faster than Basic. (Some of these games were previously available from J. Steadman).

Cassette 4 costs £5.

Recorded on quality cassettes, sent by first class post, from:

Michael Orwin, 26 Brownlow Rd., Willesden, London NW10 9QL (mail order only please)

**SPECTRUM SOFTWARE WANTED**

# CHESS

## GOING BY THE BOOK . . .

I have described Ken Thompson's invention BELLE in previous articles. It (or she?) is a special-purpose machine built solely for playing chess, and won the third world Computer Chess Championship held at Linz two years ago with a score of  $4\frac{1}{2}/5$ .

The development speed of BELLE is as impressive as its subsequent results. The initial design was in February 1980 at which point its components (1,700 chips) were ordered. BELLE's first move was made in July 1980 and only two months later it won the world championship!

The machine generates a candidate move in just over one two-millionth of a second and can examine 160,000 positions per second.

The opening "book" comprises 300,000 positions (compared with an estimated 200,000 positions in each volume of the Encyclopaedia of Chess Openings. The entire book is scanned in one and a half seconds.

BELLE's official rating is now around 2150, but improving its performance further is prohibitively difficult.

It is remarkable that the philosophy behind BELLE (fast and extensive searching of variations) is the exact opposite to that adopted by Mikhail Botvinnik, who as well as being a computer chess researcher for many years was three times world (human) champion.

His conference talk (see panel) on "Decision making and computers" stressed the important of examining only a small number of positions at each turn — preferably only one — and to restrict the analysis for each move to approximately 50-60 — well chosen — positions in all.

Only by this means, in Botvinnik's view, can master play be achieved. Botvinnik's program "Pioneer" has been a long time in development but may well be a major advance when it appears. Sadly it seems that there is virtually no other USSR

As well as a hobby and a game, computer chess has long served as a vehicle for serious research in computer science, especially the branch known as *artificial intelligence* which is largely concerned with the methods by which people solve problems requiring complex reasoning.

There has even been a series of academic conferences on the subject and the papers from the most recent one are soon to appear in book form under the title *Advances in Computer Chess, 3* to be published by Pergamon Press and edited, as before, by Michael Clarke, a researcher at Queen Mary College, London.

The conference itself was held last Easter at Imperial College, London and attracted delegates from nine countries as well as speakers from no fewer than seven.

The first two conference talks were by Ivan Bratko, a Yugoslavian, and Don Beal from Queen Mary College who have been independently investigating the question "why are valuations of positions based on deep analysis more reliable than "static" ones made without any analysis?"

This seems obvious (and if it were not so, most chess playing programs are carrying out a vast amount of calculation for nothing), but it is tantalisingly difficult to answer precisely. At last, an explanation (or, at least, a partial one) has been found and is given in the book.

Other theoretical papers at the conference dealt with different aspects of searching trees of variations, forms of automatic learning, long-range positional planning, measuring the "information" contained in a chess position, and psychological experiments on both people and machines.

Two of the most interesting papers at the conference were presented by Ken Thomson, of Bell Laboratories, and Mikhail Botvinnik who was making a rare visit to Britain from the USSR.

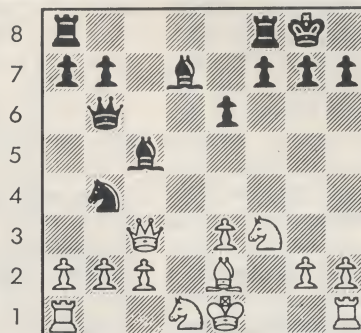

Fig 1. a b c d e f g h

work on computer chess in progress at present.

The Kaissa program which won the world championship in 1974 has not been developed much since.

Although some of the conference papers are far from simple for the uninitiated to understand, *Advances in Computer Chess, 3* and the two earlier volumes, published by Edinburgh University Press, are the best available works for the serious student of the topic.

The next conference is due in 1984. Will computers have reached master level by then?

To conclude, here is a game played on the evening of the conference between Danny Kopec — a U.S. Master and former Scottish champion — and BCP, a good example of a well-developed and relatively strong program.

Danny Kopec was playing BCP and an early version of BELLE — 30 times slower than the current one — simultaneously.

### BCP (White) versus D. Kopec (Black)

1. P-K4, P-K3; 2. P-Q4, P-QB4;

The "Franco-Sicilian" defence. Black's strategic aim is "to confuse White" and he succeeds. BCP is now out of the book.

3. N-KB3, P×P; 4. Q×P

An attempt at originality.

4.... N-QB3; 5. Q-Q3, B-B4; 6. N-B3, N-B3; 7. B-KB4, Q-N3; 8. N-Q1, P-Q4; 9. P×P, N×P-10. B-K3, N×B; 11. P×N, B-Q2. Black is now well ahead on development.

12. B-K2, N-N5; 13. Q-B3? 0-0; (Fig 1.) White is lost, Black threatens 14. . . . N×QRP immediately. White's Queen Bishop Pawn is vulnerable and a Knight move to Q4 is also dangerous.

14. N-K5, B-R5; 15. B-Q3, White's only possible counterplay is 15. N-QB4.

15...., N-Q4;

Overlooking 15. . . . N×QBPch.

16. Q-B4, Q-R4ch; 17. P-B3, QR-B1;

18. Q-R4, P-B4;

A typical computer game. White is totally lost but keeps finding counterplay 19. N-B4, Q-B2; 20. P-QN3, B-K1; 21. P-R4, N×KP;

22. N(B4)×N, B×N; 23. N×B, Q×BPch; 24. K-K2, Q-N7ch;

25. N-B2?, R×Nch; 26. B×R, Q×Bch; 27. K-KB1, B-B3;

28. Q-N5, P-KB5!; 29. R-K1, P-B6

and Don Beal resigned for his program.

BY MAX BRAMER

# TV GAMES CENTRES TV GAMES CENTRES TV GAMES C VIDEO SCREEN

## E.T. MEETS THE F.B.I.

All I want to do is get home. That's poor old ET's lament in the latest Steven Spielberg blockbuster in which the friendly alien from outer space does his best to get back to his family and friends.

Trouble is every time ET tries to do just that those 'Earthling Aliens' conspire to stop him.

The man from the FBI tries to lock him up for the protection of the good citizens of the US.

The scientist wants to get him back to his laboratory to carry out all sorts of gruesome experiments.

ET soon finds that the only person he can trust on the inhospitable planet Earth is schoolboy Eliot.

Now you can become ET's friend and help him get home in this latest game from Atari for the VCS.

The idea of the game is to find the three pieces of ET's interplanetary telephone and then call up his ship to come and rescue him.

Whilst conducting your search, manoeuvring ET around the screen using the joystick, you can also pick up pieces of candy which appear periodically in the centre of the screen.

As well as earning you extra points these pieces of candy are also vital in helping you locate the third section of the telephone.

The game is controlled by nine power zone symbols which are constantly changing and on

### E.T.

which you must keep a sharp eye as they dictate what you can and cannot do at any given stage in the game.

The game has three difficulty levels. The simplest of these features just ET and his little friend Eliot searching for the various bits of the telephone.

Game two introduces the government agent who is trying to arrest ET and chases him.

For really skilled players level three introduces another baddie to deal with in the shape of a scientist who will haul ET back to his laboratory.

ET will be in the shops before Christmas to coincide with the film going on general release. It costs £29.95.

## SECRETS OF SYSTEM X

The long awaited successor to Atari's successful VCS machine is about to be released in the US.

The 5200 will be in the shops in the U.S. this Christmas at around the £150 mark Dubbed System X when prototypes were shown to journalists the machine has 48K of computer memory enabling it to produce "state of the art" graphics.

The aim was to produce video games to be played on a domestic TV set of the same high quality as the coin operated games of the arcades, and according to out sources, the first wave of games, which includes Pacman and Centipede, do have the fine graphic detail one associates with the pay-per-play devices.

Before Atari owners start rushing out to the shops to enquire about this new machine there are two drawbacks that must be mentioned first. Most importantly Atari have so far said nothing about a UK launch date for the 5200. Indeed an Atari spokesman told C&VG: "We don't want to talk about that yet".

Secondly the present range of Atari VCS games will not be compatible with the new system. It has been rumoured in the U.S. that an adaptor which would enable VCS games to be played on the 5200 is also to be produced

## WHO'S NOT A PRETTY BOY THEN!

### SPACE VULTURES

Space Vultures are a vicious breed of birdlike aliens who can fly through space without the aid of space ship. They will attack any old planet that takes their fancy on their strange intergalactic migration.

Nobody seems to know where they are going, or for what purpose, but then it does not really matter to you — the lone pilot of the sole remaining planetary Defender Ship.

Your duty is clear. Shoot down the aliens before they shoot you and colonise your planet for their evil bird-like overlords.

The vultures attack in groups of three, hovering around the screen and then homing in on your space ship.

You are armed with an energy shield which will protect you for a few seconds, enabling you to survive a head-on collision with the aliens and shrug off their laser fire.

If you survive the first wave of Vultures you are then challenged by the super birds who are several times the size of their predecessors and who attack in waves of three.

These superior adversaries take more than one direct hit to finish off. They swoop down straight towards your ship bombarding you with missiles. You will need to shoot fast and accurately to down them before they down you.

One drawback that Defender Ship pilots very quickly have to come to terms with is the slowness of the ship's missiles. They jerk very awkwardly skywards.

Despite this the Vultures are still pretty easy to deal with. This particular Defender Ship pilot managed to shoot down wave after wave of them on his second go.

Space Vultures is the latest game for the new Hanimex HMG 2650. The game is available from Hanimex stockists at approximately £20.

### ATARI 5200

but this has so far not been confirmed.

If there is some uncertainty about when Atari will launch their new machine in the U.K. there is no doubt about the debut of another exciting video games system from America — the Colecovision.

The graphics are not only more detailed than conventional systems but they are also capable of producing more on-screen movement, greatly enhancing the playability of the popular space-battle genre of video games.

Coleco have insured the system against obsolescence in the fast moving video games market by making it capable of being up dated with a planned programme of add-ons. The first of these add ons will be an adaptor which will enable any existing cartridge produced for the VCS to be played on the Colecovision.

The machine will be launched with an exciting range of games. Arcade smash hits like Donkey Kong (with the manic gorilla, and captured starlet), Zaxxon and Gorf have both been converted.

The Colecovision is expected to be in the shops by next April but no news on price yet.

# S CENTRES TV GAMES CENTRES TV GAMES CENTRES VIDEO SCREEN

## BRIGHT NEW YEAR FOR VIDEO FANS

Every other TV commercial these days seems to be advertising either video games centres or extra cartridges to go with them.

One spin off from this hotting up of competition is that prices in the high street shops are beginning to fall.

The Interton VC400 can now be snapped up for less than £50 which includes a free Space Invaders cartridge. The price of additional cartridges for this machine are also down in price.

It is as well to issue a word of warning about this machine however. Hanimex have recently introduced a new machine to replace the Interton — the HMG 2650. There will therefore be no new games for the Interton once current supplies have sold out.

## DOWN THE CORRIDOR OF DANGER

You are a secret agent on a mission to infiltrate a top secret fortress.

Armed with a powerful laser gun you can shoot the mechanical guards of the fortress who are chasing you. You can also duck down by pulling back the joystick to crouch beneath the guards' lasers.

The screen shows five corridors, one on top of the other, with six connecting lifts.

The idea of the game is to get your little man to the highest corridor and then safely back down again.

Precision timing is needed to judge just the right split second

### GAMES CENTRES

Not that only machines which are being phased out are falling in price. Phillips have recently announced that they will be chopping £30 off the price of their G7000 to help them compete with Atari in the Christmas shopping spree. New price £70.

Mattel is tight lipped on the subject of price cuts to their Intellivision machine which is now selling for £159. It is unlikely that they will be able to maintain this price for too much longer. Many of the dealers have already felt it necessary to lop £20 off this price. Even at £139 the machine is competing not only with other TV games-centres but with half a dozen micro-

computers many with superior graphics and a wider and cheaper range of games available.

Even Atari, who currently head the field with sales of their VCS, will find it difficult to resist a price cut in the new year as the prices of micro computers looks set to tumble.

The price of cartridges too is likely to come down more in line with prices in the U.S. where games cartridges are roughly a third of the price they sell for in the U.K.

So although it is not an option open to Father Christmas the wise buyer may do better by saving his money until the Spring.

### INFILTRATE

to jump on one of the lifts which pump up and down automatically like pistons in a steam engine.

Once on a lift you have to watch carefully for the positions of the mechanical guards as a blast of laser fire is their usual greeting to anything unexpected emerging from a different floor level.

Infiltrate can be played by one or two players and is the latest addition to the Apollo range of games for the Atari VCS.

Also new from Apollo for the pre-Christmas shopping rush is a

nail-biting traffic control game called Final Approach.

This is your chance to suffer the tension in a simulation of one of the world's most high pressured jobs.

Planes are taking off and landing at an international airport. It is your job to see that the incoming traffic gets down safely without colliding with countless outgoing flights. Sounds easy? Just you give it a try. And remember many of the world's most serious air disasters have been traced back to air traffic control blunders and that the average air traffic controller retires with an ulcer before the age of 40!

Also new this month on the Apollo label is a slightly less serious game called Wabbit.

You are an honest hard-working farmer trying to protect your crops from a family of thieving rabbits who live in a series of burrows in your carrot field.

Every time their big ears pop up from one of the holes you throw one of your rotten eggs at them in an attempt to stink them out of their honeycombed hide out.

The Apollo range of games are imported into this country from the US by Vulcan Electronics of London. They are currently in the shops at £24.95.

Illustrations: Terry Rogers

MACHINE	NAME	MANUFACTURER
1 Intellivision	Dungeons and Dragons	Mattel
2 Intellivision	Sub Hunt	Mattel
3 Atari	Defender	Atari
4 Intellivision	Night Stalker	Mattel
5 Atari	Starmaster	Activision
6 Intellivision	Lock 'n' Chase	Mattel
7 Atari	Berzerk	Atari
8 Atari	PacMan	Atari
9 Intellivision	Utopia	Mattel
10 Atari	Frogger	Parker

The above top ten represents the sales of cartridges during the month of October.

The dominance of Mattel games as being due to a backlog of delayed releases in that month. People bought a number of Mattel titles they had been waiting for for some time.

The retailers are expecting the November chart to show a completely changed picture. Watch out for next month's top ten. Will your favourite be in the charts?

# PENGO IS REALLY COOL!

It is possible to judge your addiction to an arcade game by how far you will travel to play it. For one more game of Pengo I would willingly travel to the Antarctic wastes in which it is set.

Four lucky members of the C&VG team have so far tried out this cutest of coin-operated video games and their verdict is unanimous . . . Pengo is the C&VG tip for 1983.

First read-on and then go and pester your local arcade owner to get hold of a Pengo machine.

## PENGO

That is the essence of the game, Pengo must wipe out each swarm of sno-bees before they can run him to ground.

Each screenful of sno-bees consists of some which become instantly active and others disguised as ice blocks. These can be pecked to death by Pengo before they "wake up".

Unlike the Pacman ghosts, sno-bees are somewhat haphazard in their pursuit although one will occasionally give dogged chase to Pengo.

But while not unduly aggressive, these cute little villains can usually spot a waiting penguin a mile off and will try to approach on the wrong side of the ice block, thus robbing Pengo of his ammunition.

They are helped in this by their ability to chisel through the ice-blocks and Pengo shares this ability when he needs to get out of a tight corner.

There is a lot more to this game, like making the sno-bees dizzy and scoring big bonuses by squashing two with one block or using the indestructible blocks.

Pengo is a game apart, with

Brrrr! Deep in the confines of the frosty blue maze Pengo is pushing his way out of trouble.

His flippers may not be much good for flying but they sure pack a punch on the Antarctic ice-rink he knows as home.

This frozen wasteland is made up of a random maze constructed out of blue ice blocks. Pengo starts in the centre and the villains of the piece, the sno-bees, set off from the corners.

The sno-bees' sting is deadly and Pengo is helpless in any bee-to-beak confrontation, but this flightless sea-fowl can move the ice-blocks around with a hefty push. And woe betide any sno-bee who gets caught behind a block.

wonderful graphics, delightful characterisation, plenty of scope to work out your own tactics and a catchy melody.

But if there's one over-riding reason why Pengo will take off, it's down to that feeling of satisfaction you get when an ice-block picks up speed and knocks all the wind out of a surprised sno-bee!

## THE SUICIDAL STOCKBROKER

### WALL STREET CRASH

The great Wall Street crash is happening all over again.

As fire chief it's your job to catch the suicidal stock brokers as they try to end it all in one final desperate leap.

Once safely pouched in a safety blanket the danger is not over as they must be bounced into a waiting ambulance. A good player will manage it in two bounces, a beginner may well see his stockbroker bouncing off screen or just straight up again.

And the Dow Jones Index is falling all the time. Each broker who reaches an ambulance helps light up the bank and six will enable you to move onto the next stage of the game.

This is a long maze where money bags have been hidden. These must be collected and deposited in a safe. Tanks chase you through the maze.

The action continues in these modes alternately with more tanks and more brokers being added. By the time you reach three suicidal stock marketeers, a helicopter has appeared and it is possible to achieve a bonus by shooting a saved broker skywards into it.

# BURGERS HAVE YOU IN A PICKLE

Burger time is the fast food game to keep a budding chef on his toes.

Picture the scene: the eggs, sausages and pickles are revolting in the kitchens.

You take the part of a chef, whose only hope is to trap your edible enemies in the burgers you are busy making.

A series of burger bridges are constructed among the platforms and ladders which make up your kitchen. Every time you run across a burger, piece of bun, cheese, tomato or lettuce, it drops closer to the dish the complete burger should end up on.

As you run across the piece of cheese, for example, it drops down a level, sending whatever lay below it, down too. Gradually a complete burger is built up, but a good player will add eggs, sausages and pickles to that burger by catching these items of food between layers.

## BURGER TIME

This is done by running across a piece of burger when closely followed by an enemy.

When things get too hot for you, a quick sprinkle of pepper from your pot will stop the enemy.

French fries and ice-cream cones will add to the pepper you have left in your container.

## ON THE ROAD TO RUIN ON THE MOON

### MOON PATROL

The moon's surface is an inhospitable place, pitted with craters and also boasting an atmosphere heaving with aliens.

In Moon Patrol a moon buggy is your responsibility as it traverses a lunar landscape across the screen.

You are armed with a fire button and a jump stick to overcome most of the hazards that come your way.

The aliens hovering above your craft are the main source of danger in this game.

By pushing your fire button you can launch a missile skywards to try and bring them down.

But take care to avoid the bombs they are dropping moonwards to bring about your destruction.

Their bombs may also leave dangerous pits in the moon surface and these have to be noted and duly jumped.

The alien attackers take on three forms, there are obstacles across the surface which have to be blown up. Land mines, erupting volcanoes and low-flying planes add to the tension.

If you survive the beginners' course there is a champion course waiting to challenge you.

Moon Patrol is a simple game with easy to tackle controls and an obvious game objective, but it is not among the best of the recent batch.

## SOMETHING NASTY IN THE GARDEN

### DIG-DUG TIPS

The Dig-Dug score clock turns over at 999,990 but that needn't be the limit for a dedicated player.

Although this score seems beyond belief to a beginner, it is really just a matter of knowing the short cuts.

Beginners tunnel their way up to a monster (either a fire-breathing Fygur or a less dangerous Pooka), fire their pump gun, pump the creature to death and then move onto the next victim.

Using this technique it is possible to clear round after round but it has several disadvantages: it stops being effective at the higher rounds; it is very time consuming; it generates far less points as the fruit is not always recovered.

A better technique is to find your way beneath a rock, wait for some monsters, squash them, tunnel through to the next rock, squash some more, grab the fruit. And then finish off the monsters.

Try and reach the rock before the ringing noise sounds as this releases the monsters.

Should monsters block you off from the next rock there is a technique for killing them.

After dropping the first rock tunnel yourself close to the main tunnel but not actually breaking through into it. Two millimetres is enough to use your pump on passing monsters who cannot

get your man. Always approach the tunnel horizontally as more points accrue from monsters tackled this way. When only two monsters remain move to the next rock, use it, thus making the fruit appear; grab it and finish off the final monster.

Fygars killed horizontally are worth double points and another way to bump up the points is to pump monsters in the lower areas of the screen.

It is divided into four horizontal layers. Points scored for a monster depend on which area he is finished off in. For example, a Pooka is worth 500 points if he is killed in the bottom layer.

When pumping a monster, push towards them as this will inflate them faster.

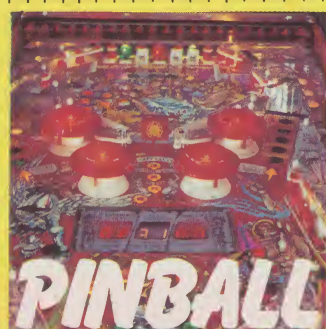

A tip for rock tunnelling is to leave a notch below the horizontal entrance to the vertical tunnel. This notch will ensure that no monsters escape.

Nuneaton Dig-Dug champion, Tooba Zaidi, who compiled these tips for us, offers some other information for top players: most rounds that can be displayed are 99; if you squash all eight monsters a 15,000 point bonus is achieved and after the 32nd round any successful pattern you devise will work for the next 50 rounds at least.

## THE VIDEO WIZARDS

The latest casualty of improving arcade scores is Atari's Centipede. Three players have now come forward to reach 999,999 and I gather that it is possible to go well over the clock on this machine — and so it seems time to close this file down.

Only one contender for turning

Grab your bicycle clips and head for your nearest arcade — Bally's BMX is heading your way! This latest pinball from the American giant is based on the new cycling craze, bicycle motocross.

BMX continues Bally's return to the table that requires quite a lot of skill to master it. BMX features two levels and colour-coded targets — like the recently released Spectrum. There's also a mysterious magnetic device on the top level.

A novel feature of this novel machine are the devices which save a ball which finds its way down the chute. There are two additional buttons alongside those which control the flippers and these work two "shields" which catch the lost ball and send it back into play — but you can only use them just so often!

the clock over at Dig-Dug though. Tooba Zaidi, who wrote the tips is our highest scorer here. Tooba also claims top spot on the Tempest machine. Still awaiting scores on: Space Dungeon and Robotron.

Illustrations: Terry Rogers

TEMPEST	QIX
945,481	263,820
Tooba Zaidi	Sarabjit Singh
SCRAMBLE	CRUSH ROLLER
912,160	471,530
Andrew Winup	Alan Dowler
GOLF	AMIDAR
886,430	74,330
Gary Miller	R. J. Arundale
FROGGER	HYPERBALL
116,150	1,448,060
Richard George	Nick Strakings
DIG-DUG	PHEONIX
999,990	409,630
Tooba Zaidi	John Danvers
DONKEY-KONG	PACMAN
428,300	1,050,900
John Bull	Tim Haywood

Perhaps it's just the rhythmic "plink" of the sonar bouncing off the enemy hull, or maybe that tomblike silence which adds to the tension between depth charge blasts but submarine films always have that much more atmosphere than any other war movies.

Sub Hunter lets you partake in the thrill of an under-

water naval battle . . . but luckily for the claustrophobic, your role is acted out above the Briny.

The submarines may be running silent and deep but your mission is to seek them out and blow 'em up.

Your helicopter hovers above the waves, while the enemy uses them to dodge

and hide from your bombs.

The submarines are not alone though.

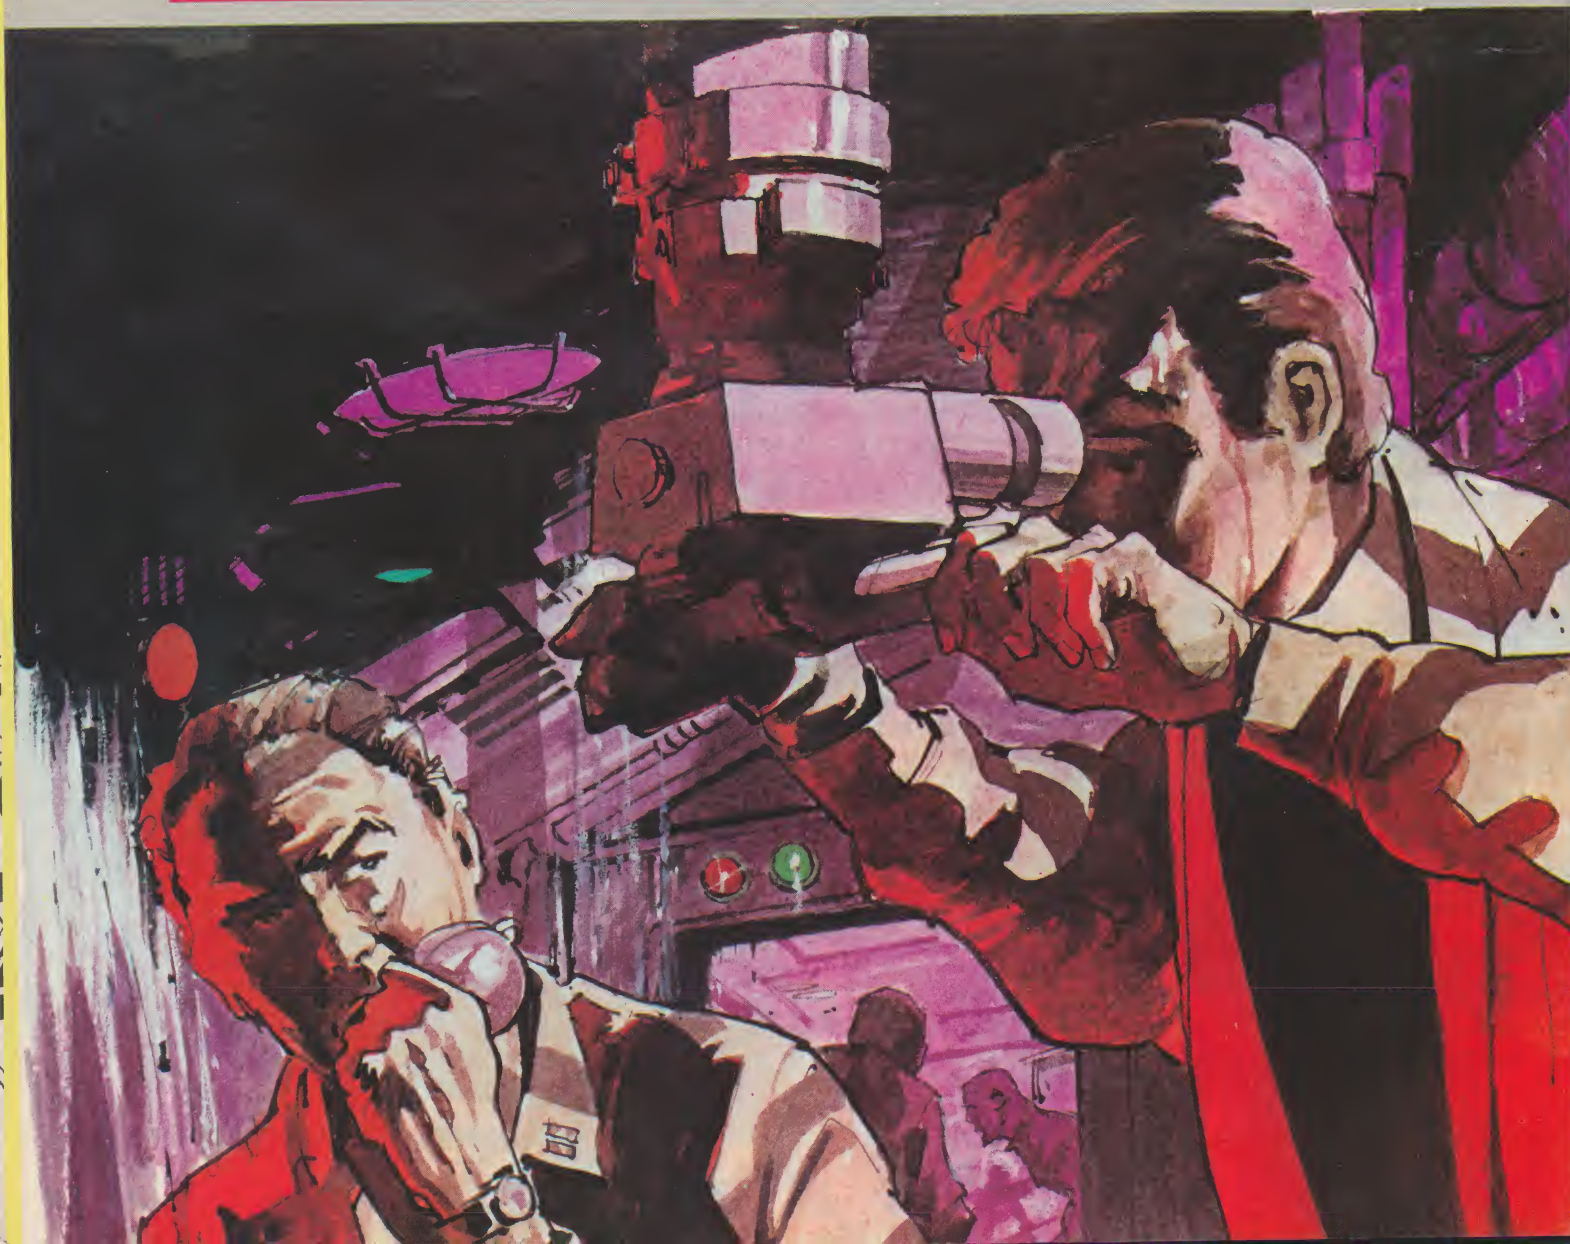

A fleet of destroyers is on hand to give covering fire and try to blast you out of the sky.

Points are scored for successful bombing of destroyers and for the destruction of the enemy subs.

```

Some nasty alien dam-busters are out to knock a big hole in your local dam and only you can stop them! The alien ships — code named Nibblers — can only be stopped by a well placed bomb from your fighter. If you miss the Nibbler will blast a bit out of the dam, weakening it. This is a game for one player adapted from Paul Jay's prizewinning program which won him the Com-

puter and Video Games Program of the Year competition

The Nibbler appears on the right hand side of the screen and moves across towards the dam. To stop the Nibbler and launch your ship you hit the space bar. When you are directly above the nasty alien you press the space bar again to bomb.

If the computer has been expanded and so has extra memory you

could use the user-definable graphics capability of the Vic to improve the game. If so then the following routine should be added at the end of the program, and line 3 changed to:

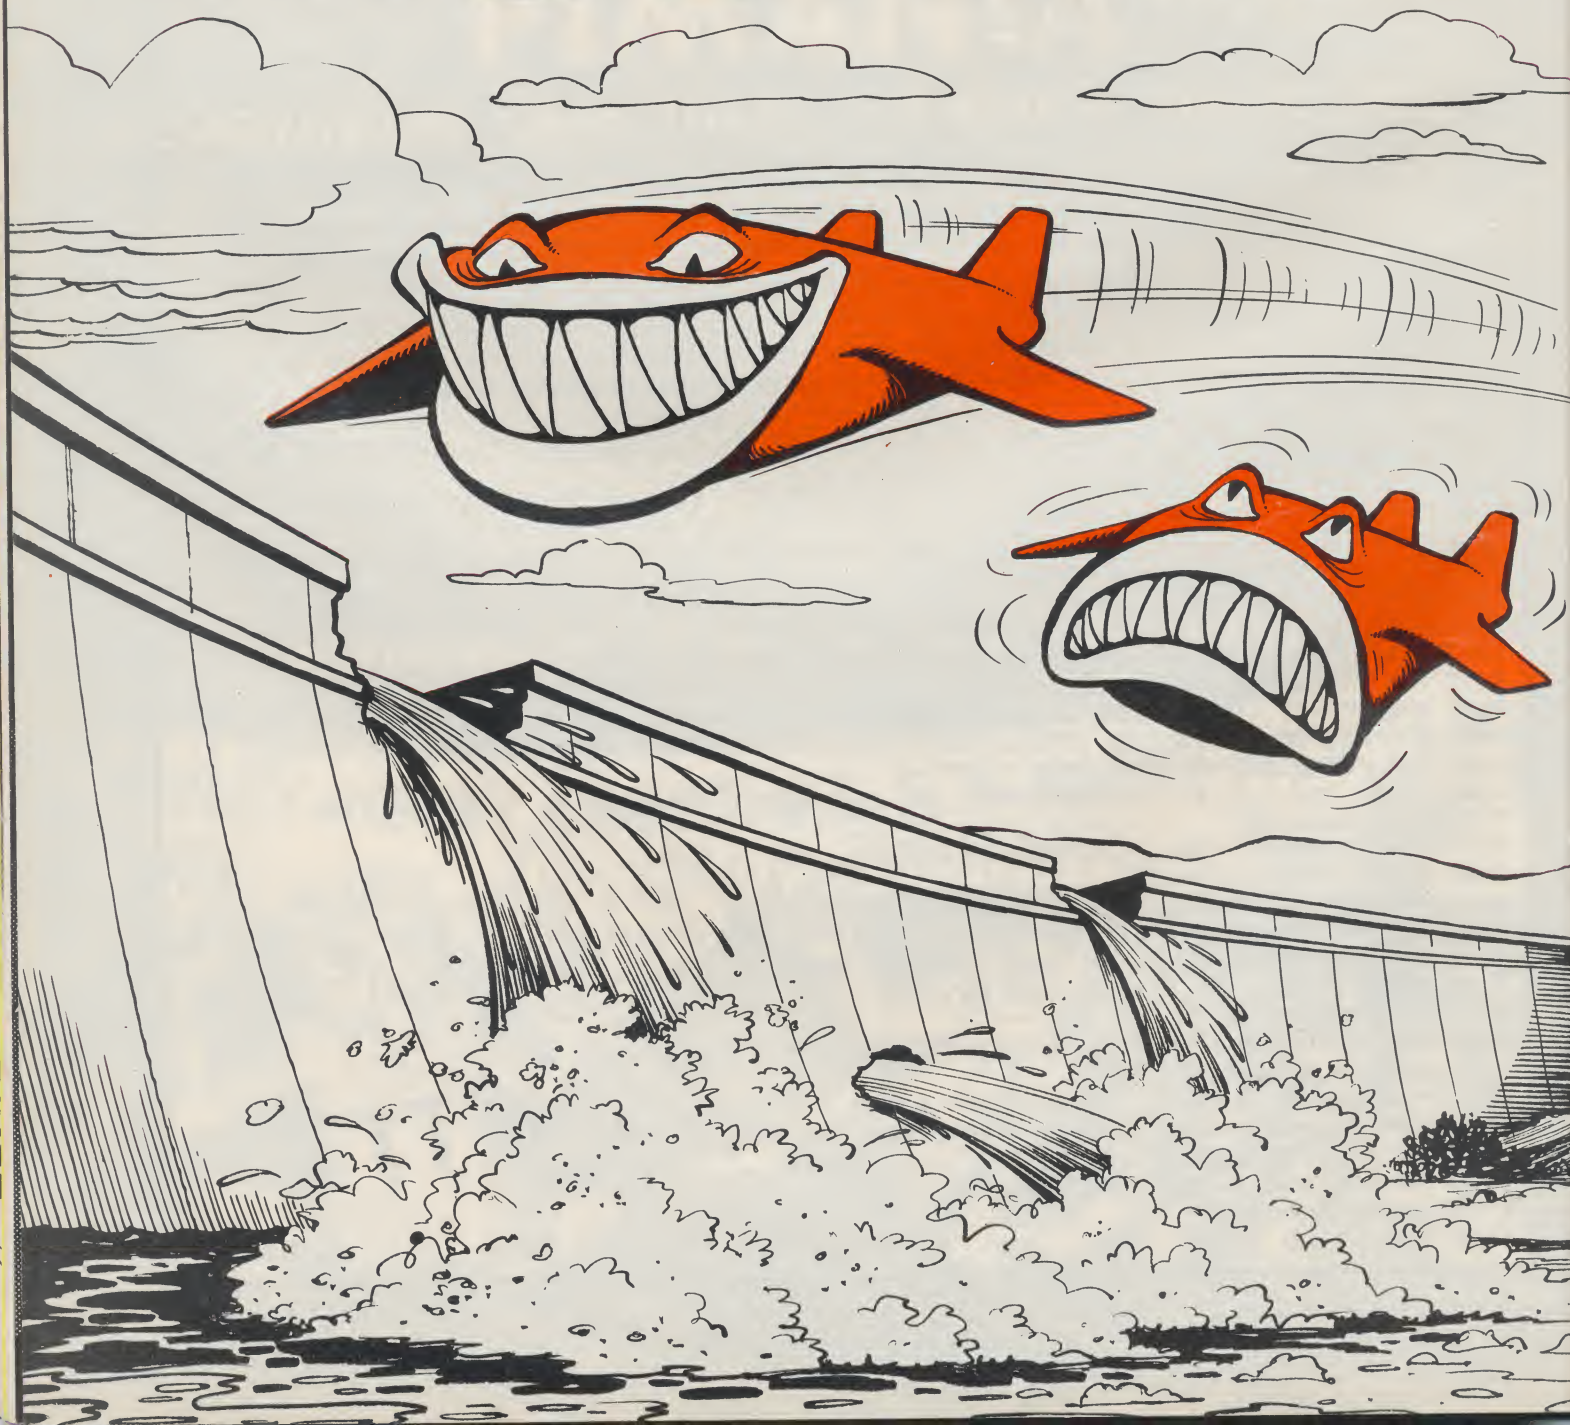

```
3 PRINT CHR$(14):
GOSUB 1000
1000 FOR I = 0 TO 1024
1010 POKE 5120 + I,
PEEK (32768 + I):
NEXT I
1020 FOR I = 0 TO 1024:
READ A
```

```
1030 IF A = 1 THEN 1070
1040 POKE 6144 + I, A:
NEXT
1050 DATA 56, 124, 230,
3, 3, 230, 124, 56
1060 DATA 24, 60, 102,
231, 166, 24, 35, 68
1070 POKE 36869, 253:
POKE 36866, PEEK
(36866) OR 128
```

```
1080 RETURN
```

If the above program is used then the pokes and peeks will have to be changed — 60 to 128 and 62 to 129.

**RUNS ON AN UNEXPANDED VIC-20**

**ADAPTED FROM C&VG's**

**PROGRAM OF THE YEAR**

# \* SUPER QUALITY SOFTWARE FROM LLAMASOFT!! \*

(DESIGNER — JEFF MINTER)

J = JOYSTICK CONTROL

## VIC 20

### ABDUCTOR

A classic new space game! ZAP the swirling alien hordes before they ram you — and abduct your humanoids! Survive the assault for long enough and you'll get an extra stage on your spaceship with double firepower! Awesome unexpanded Vic Action.

### GRIDRUNNER

Finally, true arcade quality on the unexpanded VIC! Shoot down the segmented DROIDS invading the grid. Beware of the pods and zappers! The awesome speed, sound and graphics gives you the best blast available for unexpanded Vic.

### ANDES ATTACK (8K, REPLACES DEFENDA)

Your spacecraft must attack the descending aliens and frustrate their evil intent. Fly your Ramjet fighter over the Andes mountain range and protect your llamas from kidnap by hostile UFOS. Features 5 kinds of UFO, controls include up, down, reverse, fire, thrust and smart bomb. Entirely in machine code. Requires 8K expansion and joystick. £8.00 + 50p P&P.

### TRAXX M/C (8K + EXPANSION)

This is VIC 20 cross breed between the now famed 'Pacman' and the game 'Quix'. All in machine code, fast and fun with joystick controls, uses Hi-Res colour graphics. 8K or larger expansion needed. Only £6.00 + 50p P&P complete with instructions.

### RATMAN! (8K EXPANSION)

Another amazing game from Llamasoft!! You are the man under attack by the deadly rats as they fall from the sky. You must dodge the arrows to get to the rats and then squash them with your hammer before they dig under the platform on which you stand, and mutate into devils. Fast action with great graphics to make an extremely addictive game. 8K or larger memory expansion needed. Hi-Res colour graphics, in machine code. Only £5.00 + 50p P&P complete with instructions.

### BREAKOUT/DEFLEX

Unexpanded package a full feature version of the popular arcade Breakout plus a new concept in computer games, Deflex!! Both programs on one cassette only £3.95.

### BLITZKRIEG

As seen at the Commodore show and reviewed by the Daily Telegraph. Fly your Vulcan Bomber over the enemy city and destroy the buildings. 25 levels of play, uses Hi-Res colour graphics and plays Rule Britannia between waves. Only £4.95 complete with instructions.

### GAME GRAPHICS EDITOR

Create your very own custom characters for the unexpanded VIC 20, up to 64 characters with facilities such as reflect and save on cassette etc.

## NEW J

## NEW J

## NEW J

## SPECTRUM

### GRAPHICS CREATOR (16K)

Not just another character editor! Allows you to define not only the 21 user definable characters. Also allows you to change the entire 96 character ASCII set. Creates BYTES files ready for you to load into your own programs. Includes advanced Reflect, Invert, Field commands etc. Complete with full documentation. Bin the BIN statement and use Graphics Creator with its easy on-screen cursor editing. £2.95 + 50p P&P.

### BOMBER (16K)

Yes, a full feature version of the popular game 'Blitz', supplied for the 16K or 48K Spectrum. For only £2.95 + 50p P&P.

### ROX III (16K)

Blast the falling meteors as they invade your planet, cruise missiles are your only defence in this world of disaster. If they break through the crust of your planet then your life support systems will fail. An addictive game with fast action and great graphics. 16K or 48K Spectrum only £2.95 + 50p P&P.

### SUPERDEFLEX (48K)

Bounce 'Sid', the space invader, around the screen into the power pods, keeping away of course from the devil who chases you around the screen. Steer with your Deflex shields, but beware the mines or you may be buried alive! Superb graphics and fantastic sound on the 48K Spectrum only. Only £4.95 on cassette + 50p P&P.

## ATARI 400-800

### TURBOFLEX

Superb ultra-fast and totally new ball game. Uses ATARI's unique features to the full. Incorporates superb colour/sound effects and uses Player/Missile graphics. Tables top 10 scores along with Scorer's name. £6.00 + 50p P&P.

### GRAPHICS/CHARACTER CREATOR

Now you can define your own custom character sets, or edit existing sets. Results are fully displayed on screen in modes 0, 1, 2. Special features include reflect, invert, save character sets etc. Supplied on cassette with data sheet only £8.00 + 50p P&P.

## ZX81

### CENTIPEDE (16K)

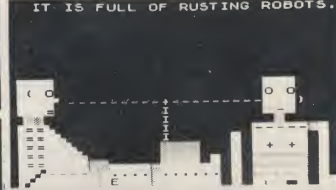

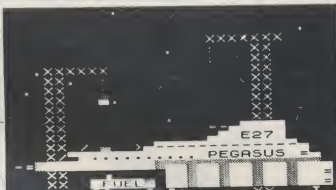

the ORIGINAL game from the ORIGINAL author. This is the identical program to that being sold by other companies for three times our price. The game has received ecstatic reviews in the computing press. Program has 30 speed levels and ever increasing Centipede hordes. Tables top 10 scores and names. Why wait to pay more? Only £1.95 + 50p P&P.

## LLAMASOFT SOFTWARE

Dept. CV5,  
49 Mount Pleasant,  
Tadley, Hants  
RG26 6BN.  
Tel: 07356-4478  
Trade enquiries  
welcome.

Please add 50p P&P with all orders

# And now for the big picture.

**TRADER** A trilogy of 16K programmes that combine to give an epic 48K graphic adventure. As a galactic trader, you deal with some very bizarre customers indeed. Will you live to tell the tale? ZX81 £10.50. VIC20 £18.50 (tape or disc).

**SUBSPACE STRIKER** Our top selling, big screen graphic game. With your deadly Antimat torpedoes, you unleash havoc in the Federation spacelanes and try to dive back to the safety of subspace, fast. ZX81 £5.50. VIC20 £9.50. 16K.

**STARQUEST** A voyage of discovery and adventure in the cosmos. With the help of your onboard computer, you seek a habitable planet amidst the perils of deep space. ZX81 £5.50. VIC20 £9.50. 16K.

**ENCOUNTER** Would you know what to do if you encountered extra-terrestrial beings? In this adventure, you are snatched off the Earth and the space invaders play YOU! ZX81 £5.50. VIC20 £9.50. 16K.

**ZOR** Battle of the robots. Fight for survival in this action-packed strategy game. Megajoules of destructive energy in a futuristic duel. ZX81 £5.50. VIC20 £9.50. 16K.

**PIXEL POWER** At last it is easy to create your own custom characters on the 8K plus expanded VIC20. A graphics workshop packed with useful features like Create, Amend, Save, View Set. £9.50. Refreshes the pixels that other programmes can't reach. (See Pixel Power in action in Trader and Subspace Striker)

**HARVESTER** Reap your reward in the Boosterspace fields around the planet Delta. A cut-throat strategy game for 2 to 4 players for the unexpanded VIC20. £4.50.

**BRAINSTORM** The telepathic emissions of the friendly Psions can wreck a human brain. Can you get our three space explorers across a river of nasty goo without blowing their minds. Unexpanded VIC20. £4.50.

**GUITARPIX 1** For the VIC20 owner who wants to play the guitar. The first of a series that shows how to tune the guitar and demonstrates some elementary chords. Unexpanded VIC20. £4.50.

Send SAE  
for more details.

BY COLIN GORDON

RUNS ON A DRAGON IN 32K

# DRAGONS TEETH

*If you thought fighting dragons was all about knights in armour, giant broadswords and maidens in distress you've got another think coming! All you really need to vanquish one of these fire-breathing reptiles is a table-tennis bat and five tennis-balls. Yes, really! And you don't even have to be John McEnroe to do it!*

*You are confronted by a particularly nasty looking dragon with a set of razor sharp teeth that make Jaws look like Albert Steptoe. All you have to do to survive is knock out the dragon's teeth using the bat and balls. Easy huh! This is breakout with a difference — it bites back! Only brave dentists need apply ...*

# JOYSTIX !

FROM **INTERCEPTOR MICRO'S**

JOYSTIX SHOWN NOT INCLUDED

At last, the ultimate in ZX add-ons has arrived. The unique board has been designed to take Atari\* type or Commodore\* type joystick. The board will take two joysticks+ which are software programmable using the in statement on your Spectrum. Just add a few simple lines to your programs for true arcade action. Supplied with full instructions and demonstration cassette for only **£18-95**

2 earth shattering games at fantastic prices ➡

**INTERCEPTOR SOFTWARE**

TRADE ENQUIRIES WELCOME  
FOREIGN DISTRIBUTORS REQUIRED

## FROG

### SPACE BUGS — MACHINE CODE

Can you defend your planet from an alien invasion. The Marauding bugs are swarming in for the kill. So keep on your toes, joystick or keyboard.....£4.00

### GALAXZIONS — MACHINE CODE

This is the most amazing alien game ever seen on the Vic 20. Galaxzions swarming in attack formation to destroy your planet. The nearest program to the real arcade game for the unexpanded Vic 20.....£7.00

### FROG

An amazing version of Frogger in the unexpanded Vic 20. With diving turtles and plenty of vehicles to run you down. Fast action and high resolution graphics. Joystick or keyboard control.....£4.00

### ALIEN ATTACK — MACHINE CODE

You are under attack from an immense force. This program has various ways for you to battle against giving an extra-terrestrial experience for any adventurous human being.....£6.00

### VIC BOMBER

An extremely fast action Bomber game for the Vic 20. With high resolution colour graphics. Flatten the enemy city before its too late.....£3.00

### PUCKMAN — MACHINE CODE

The old favourite back again. Joystick or keyboard control. Fast action. High resolution colour graphics on the unexpanded Vic 20.....£6.00

### SPACE TRAVEL — MACHINE CODE

Zap your way through the myriad of invading aliens to survive. Keyboard or joystick controls, high resolution colour graphics.....£5.00

### VIC RESCUE — MACHINE CODE

Your Planet is under attack by a fourth dimension and your only escape is by lunar pod to the mother ship. However you must first dodge your way through the Astroid belt and onto the landing pad before returning home. Keyboard or Joystick control, high resolution colour graphics.....£5.00

### GOLF

Can you get a Birdie, or how's your handicap coming along? A real time 18 hole golf course puts you to the test. One or two players, choice of clubs, with score sheet. See you at the 18th.....£4.99

### STAR SNAKE

A novel games idea — manoeuvre the snake around the screen to eat the stars but watch it or you may eat yourself.....£1.99

### WORDHANGER

A highly educational hangman game with vocabulary and 2 player or play against the computer option.....£5.00

SPECTRUM 16k or 48k

ATARI 400/800 16 k

## URGENTLY REQUIRED

Software and hardware projects for all micro computers. If you have written a program or designed an add-on then we will pay top cash or the highest royalties. So send in a demo now to: Interceptor Micro's, Lindon House, The Green, Tadley, Hants.

**RUNS ON AN ACORN ATOM IN 3K**

**BY STEPHEN MAYFROIDT**

# BULLION SNATCH

Psssst! Want to get a gold record? A criminal one that is. No it's not a Bucks Fizz number, stupid! I'm talking about real gold bars. All you have to do is find your way around a maze, pick up five gold bars and deposit them in a safe. Nothing to it. Well, there could be a few minor

problems. Like the guards who roam the maze. They can be a bit nasty at times — lethal in fact. But only if you get on the wrong side of them. The safe is also guarded by two sentries. But that shouldn't put you off — just think of all that gold!

Scoring is as follows:

100 points are awarded for picking a gold bar up.

200 points are awarded for placing it in the safe.

500 bonus points + 1 extra live are awarded for picking up and depositing the five gold bars in the safe separately.

Once all the gold bars

have been removed off the screen, "A" should be pressed — a new level of skill will be prepared, and your score and number of lives will be displayed.

The controls are — 'U' to move up, 'N' to move down, 'H' to move left, 'J' to move right.

# CURSE OF THE

BY DAVID HEALEY

*Somewhere in the Mountains of the Moon there lies an ancient Aztec temple. Inside this crumbling ruin there is a treasure so strange, so valuable and so cunningly hidden that bounty hunters from all over the world have been lured to take up the challenge to discover it.*

*But so far none have managed to unearth the treasure from its ancient resting place.*

*They have all fallen victim to the Curse of the Aztec Tomb. There are many unmentionable dangers for the would-be treasure hunter to overcome once he steps into the musty depths of the tomb and the only clue to the treasure's hiding place is a curious*

# AZTEC TOMB

**RUNS ON A ZX81 IN 16K**

Aztec symbol — which looks strangely like a modern dollar sign. But you'll have to struggle to even find that . . .

This is an adventure game based almost entirely on graphics and you have to explore the scene presented to you on the screen. The only controls you have are the 'I' key which is the walk command and the 'O' key which can be used to make your explorer, represented by a plus sign, jump over any obstacles.

You start the game at the base of the mountain and the entrance to the tomb is on the far side. Once you are at the base of the mountain there is no turning back . . .

## OUT NOW— Software for your BBC Computer

Make the most of your BBC Microcomputer with this exciting new range of BBC software packs.

Featuring colour, sound, movement and superb graphics, they cover a wide range of applications – from painting, drawing and home finance to sophisticated video games. Two of the packs include programs demonstrated in *The Computer Programme* on BBC tv.

Each of these high-quality software packages contains a pre-recorded program cassette and a comprehensive handbook.

Home Finance • Early Learning  
Fun Games • Games of Strategy  
Painting • Drawing • Music

## DOUBLE AGENT

£12.95

(3-D M/C Graphics Adventure. With sound)

Your mission is to steal the secret plans. As a master of disguise you must choose one very carefully before entering the enemy H.Q. Don't rush, don't dawdle, for either will raise suspicion. If challenged you may be able to bluff, flee or fight. You may also be taken to the cells where your disguise will help, won't it?

BUY THE TWO PROGRAMMES

**DOUBLE AGENT &  
EXTERMINATOR**  
for £19.95

and get a FREE copy of **MOONBASE RESCUE** (value £5.95)  
This offer Valid until 31st January, 1983

## THE EXTERMINATOR

£7.95

(Fast action M/C arcade style game)

### Stage 1

...Kill the birds. Your ship has 8 directions of fire. Remember they like their eggs. They have a helper . . . watch out!

### Stage 2

...Now the birds have gone, it will be easy. All you do is pick them off the ground and return them to the 'Safe area' for elimination. Wait . . . what was that. Look out!!! It's two robo....AGGGGGH

Meanwhile back in space ... the long and winding tunnel faces our brave astronaut trapped deep in the heart of a very unfriendly planet.

You have to steer a ship through the tunnel avoiding outcrops of rock and deadly mines. To keep the

ship flying you must navigate through fuel gates which you'll find tucked away in the tunnel.

There is a high score feature built into the program and you can alter the width of the tunnel as you get more skilful

at navigating through the tortuous twists and turns. Control keys are '4' for left and '6' for right.

So now it's all up to you — are you a space-age artful dodger?

# CAVE

**RUNS ON A BBC**

**MODEL A & B IN 16K**

**BY S. R. BLACKBURN**

The year is 2094. All reserves of energy have been exhausted and the people of the Earth have had to resort to a new source of power — Zydodium. This is an element twice as heavy as uranium and can only be found deep in the heart of Planet Io. Every year a brave space pilot is sent to Io to fly through the dangerous cave system and collect a supply of Zydodium crystals — which, strangely, float weightless in the caverns —

# WE FLIGHT

before teleporting them to Earth or Mars.

This year you, as an ace pilot from the C&VG space fleet, have been chosen for the task. You have negotiated the caverns, collected the crystals and are making your way back to the surface.

Suddenly all the alarms that can go off in your ship do just that. Lights are flashing, bells ringing, and beepers beeping. The automatic navigation system cuts out, the power control system explodes in a mass of sparks, and every other system apart from life support also cuts out. Your ship is careering through the caverns at breakneck speed — and all

you can do is manoeuvre around the rocky outcrops and hope for the best!

Your ship only has enough fuel for 10 seconds more flight time. You can recharge your engines by flying through the floating patches of Zydomium crystals but you must have quick reactions to steer your way into the crystals and avoid the very solid cavern walls. How long can you survive?

The ship is controlled using the 'A' key for up and 'Z' for down. The distance you have travelled and how much fuel you have left will be displayed at the bottom of the screen. Your fuel does not start run-

ning out until your score reaches 40.

The walls of the cave will never quite close up but long diagonal passageways are common. These may seem impossible to fly through but all the caverns are navigable. A score of over 2,000 puts you in the space ace class!

**Variables**

F%—distance travelled.

H%—high score.

Y%—counter for position of red stars.

I—used in delay loops.

X—vertical position of ship.

DOWN—position of cave floor.

UP—position of cave ceiling.

A\$—used for input of movement.

# Sinclair ZX Spectrum

**16K or 48K RAM...  
full-size moving-  
key keyboard...  
colour and sound...  
high-resolution  
graphics...**

**From only  
£125!**

First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. High-resolution graphics. And a low price that's unrivalled.

## Professional power— personal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM). 16K of RAM (which you can update later to 48K of RAM) or a massive 48K of RAM.

Yet the price of the Spectrum 16K is an amazing £125! Even the popular 48K version costs only £175!

You may decide to begin with the 16K version. If so, you can still return it later for an upgrade. The cost? Around £60.

## Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer—available now—is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232/network interface board.

## Key features of the Sinclair ZX Spectrum

- Full colour—8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound—BEEP command with variable pitch and duration.
- Massive RAM—16K or 48K.
- Full-size moving-key keyboard—all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution—256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.
- ASCII character set—with upper- and lower-case characters.
- Teletext-compatible—user software can generate 40 characters per line or other settings.
- High speed LOAD & SAVE—16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair 16K extended BASIC—incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

# rum

## ZX Spectrum software on cassettes – available now

The first 21 software cassettes are now available directly from Sinclair. Produced by ICL and Psion, subjects include games, education, and business/household management. Galactic Invasion... Flight Simulation... Chess... History... Inventions... VU-CALC... VU-3D... 47 programs in all. There's something for everyone, and they all make full use of the Spectrum's colour, sound and graphics capabilities. You'll receive a detailed catalogue with your Spectrum.

## RS232/network interface board

This interface, available later this year, will enable you to connect your ZX Spectrum to a whole host of printers, terminals and other computers.

The potential is enormous. And the astonishingly low price of only £20 is possible only because the operating systems are already designed into the ROM.

# sinclair

Sinclair Research Ltd, Stanhope Road,  
Camberley, Surrey GU15 3PS.  
Tel: Camberley (0276) 685311.

## The ZX Printer – available now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set – including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper (65ft long and 4in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

## The ZX Microdrive – coming soon

The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing.

Each Microdrive is capable of holding up to 100K bytes using a single interchangeable microfloppy.

The transfer rate is 16K bytes per second, with average access time of 3.5 seconds. And you'll be able to connect up to 8 ZX Microdrives to your ZX Spectrum.

All the BASIC commands required for the Microdrives are included on the Spectrum.

A remarkable breakthrough at a remarkable price. The Microdrives are available later this year, for around £50.

## How to order your ZX Spectrum

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day. BY FREEPOST – use the no-stamp needed coupon below. You can pay by cheque, postal order, Barclaycard,

Access or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR.

# GALAXIANS

BY CRAIG FISHER

From out of the deepest recesses of space comes a convoy of aliens bent on destruction — your destruction! Can you halt their determined advance?

This is a version of arcade Galaxians, complete with those nasty swooping craft which dive down at you from the skies. To make scoring harder in this version you can only shoot these diving aliens — and not the ones in the convoy.

Key '1' moves your laser base left, key '3' right. Use '0' to fire. The high score so far, claimed by the author, is 4100. Can you do better?

## TABLE OF VARIABLES

### Alien 1:-

- H: Horizontal position
- A\$: Character(s)
- ID: Direction (-1 for left; 1 for right)
- OH: Previous horizontal pos. of alien.

### Alien 2:-

- L: horizontal position
- B\$: Character(s)
- IDL: Direction (see above)
- OL: previous horizontal pos. of alien.
- A: High score
- s: Current score
- Y: Horizontal pos. of convoy.
- D: Direction of convoy (see above)
- P: Position of laser base.
- V: FOR ... NEXT loop: height of aliens.
- W: Current wave No.
- W\$: Flags string: shows No. of wave s on screen — 51.
- DI: Temporary direction variable.
- G\$: Convoy character string.

Here's a really explosive board game. You'll have to be really careful not to start off a chain reaction which will literally wipe you out!

It's a two player game based on a board game called Explosion — difficult to play on a board but tailor made for the TRS-80. You are presented with a 6×6 grid and each player in turn introduces one of his counters either onto an empty square or a square occupied

by one or more of his own counters. However, each square has a point at which critical mass is reached and fission occurs. Corner squares explode when two counters are on them, side squares explode when containing three counters, central squares go up when four counters occupy their space.

When an explosion occurs the counters on the exploding square are distributed

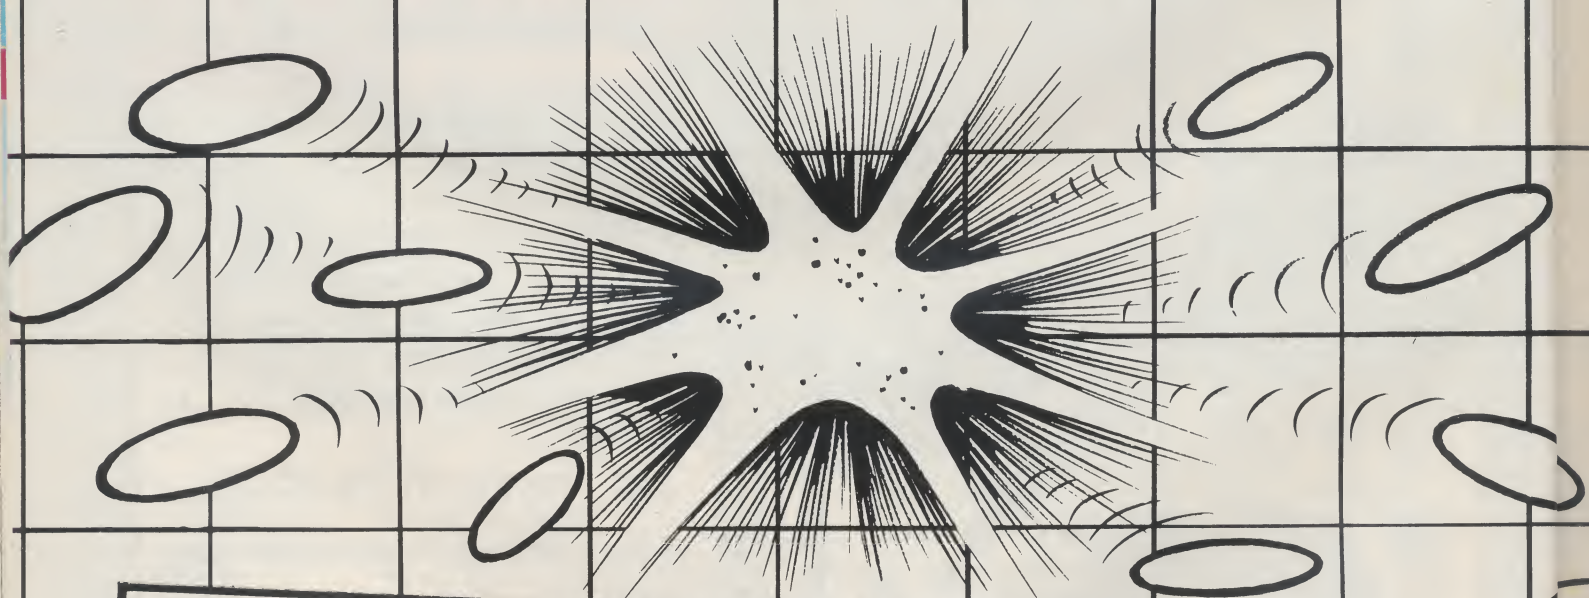

across the board. Any enemy counters on the latter square are captured and become counters belonging to the mover. Should receiving squares attain critical mass further explosions will result.

Any player having no counters left at the end of his opponent's move is the loser. The game has some interesting sound effects which can be enjoyed via the cassette port.

the entire known Universe!"**

## TIMEGATE

Quicksilva's 1st level two game. The best space/time adventure of 82.

## TIMEGATE

High speed graphics combine with electrifying space adventure makes TIMEGATE the game of all games.

Foil the ruling aliens by travelling back through time and blasting out their home planet. Fight 3D space battles on your journey, seeking the time gates that lead to year zero and the salvation of the human race.

Features: 4D, High speed graphics, versatile scanning, status and battle computers, land & take-off from many planets, time-travel, 5 skill levels, score & rating plus free training program.

## MORE NEW RELEASES!

### THE CHESS PLAYER

Who is he? Dare YOU challenge him? Risk high stakes and pit your wits against the chess game with personality, speech and devastating chess skills. THE CHESS PLAYER costs less, while offering you more skill—boosting enjoyment. Features: 6 skill levels, analysis, copies display and all moves to printer or screen, colour or B & W display, save game at any point, Personality & speech.

### SPEAKEASY

Add speech or music to your programs! In response to massive demand, we have released SPEAKEASY for your own use and enjoyment.

Simply record your sound onto a cassette and play it into your Spectrum via load. The signal may then be edited and replayed on command from your Basic or M/c program. NO EXTRA HARDWARE REQUIRED!

Edward de Bono's Classic  
**L-GAME**

Simple rules and complex strategies make the L-GAME an essential for everyone. Also includes outstanding and compulsive versions of Mastermind & Pontoon. As featured on T.V. in Edward de Bono's Thinking Course. L-GAME REACHES THE BITS OTHER GAMES DON'T TOUCH!

### SPACE INTRUDERS

Features 4 alien types, random saucer points, 2nd attack wave mutant, exploding aliens, bonus base 50,000 points, left-right & fire, sound effects and colour.

### METEOR STORM

3 meteor types, 2 saucers, full screen wrap-around, bonus ship every 10,000 points, amazing explosions, left-right-thrust-fire & hyperspace, sound effects and speech.

WHAT THEY SAY ABOUT OUR ZX81 GAMES:

### QS SCRAMBLE—

"...amazing, fantastic!..." (P.C.W.)

### QS INVADERS—

"...just like the real thing!..." (C & V.G.)

### QS ASTEROIDS—

"...very good." "...addictive game..." (C & V.G.)

### QS DEFENDER—

"...Better than any other arcade game I've seen..." (Sync)

"...nicest games I've played on the ZX81. All the tapes were impressively packaged..." (Which Micro & S.R.)

# MZ LUDO

Quick thinking, an eye for the main chance and a grasp of tactics are what you need to beat the computer at this adaptation of the famous board game Ludo. It may seem simple at first but your Sharp will prove a tough opponent in this battle of wits. If you fancy a more even battle why not take on a friend — the program allows for two players to take part.

All the normal rules of the board game apply here — and the computer will not allow you to cheat!

There's a nice graphic dice to control all the moves and you simply use the 'Space' key to get it rolling.

Remember if you manage to land on an opponent's counter — represented on the Sharp board by graphic characters — it sends him right back where he started from — a very satisfying move!

For those who can't remember the childhood tactics of the game, it's all a question of deciding which piece to push along in front.

I tend towards a one-out, all-out strategy but will let you develop your own tactics to

get your four counters home fastest.

You will need to get an exact move to finish on, so there's a little luck involved at the death but you'll just have to trust your Sharp not to cheat on its dice throws.

It's during games like this that you really notice those Shift-y keys the Sharp has!!!

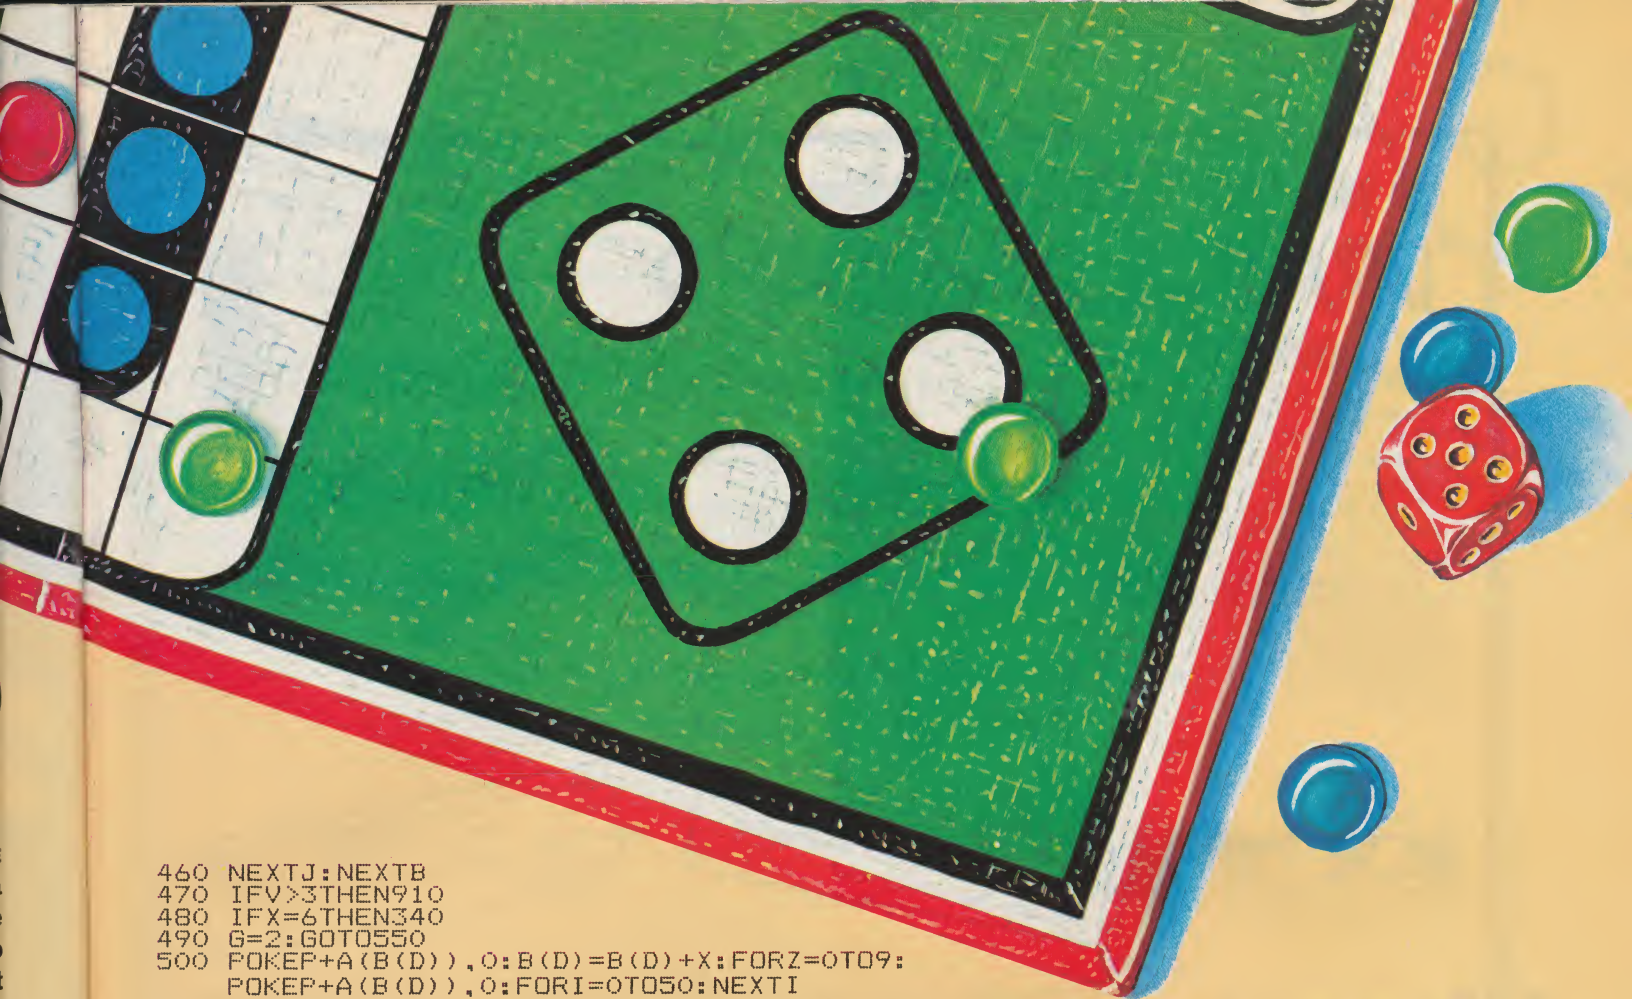

BY FRANK ROONEY

For your Tandy TRS-80 and Video Genie

# DRACULA ISLAND

We've capitulated! So many people have asked for a Kansas quality Adventure, that finally, here it is.

This has all the ingredients of the traditional adventure plus an involved plot, which will take a great deal of solving.

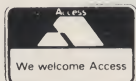

The aim is to get rid of Dracula, but of course you have to find him, and at the same time have the correct objects at the correct time all the way throughout, otherwise you will not get very far.

There are countless locations, objects and happenings, with the game operated in the normal way with either single key entries for the regular used words and the program operated with two separate words throughout.

The programmer says it will take on average three weeks to solve! But unlike normal adventures, this one can be saved to tape, thus allowing you to load the saved data, and so resume at the same place and time and with the same objects as you previously left the game.

Needless to say, as our very first adventure, it's a good one. It's machine language of course!

£9.50

If you have a BBC Micro ask to get on our BBC program mailing list — and see the difference!

We are offering TEN good TRS-80/Video Genie programs in our annual January sale — ask for details.

**M. C. LOTHLORIEN**

**SPECTRUMS and DRAGONS!**  
(not forgetting ZX81)

A fantastic range of 16K games, each complete with fully comprehensive instructions

**1. TYRANT OF ATHENS.**

Can you survive long enough to turn Athens into the most feared state in the Mediterranean? Train troops, build warships, fight battles by land and sea against hostile Greek States and the vast Persian Empire. Many more features in this very addictive game. Dragon version uses high resolution graphics to produce a map of the E. Mediterranean on which the naval battles are fought.

Price: DRAGON £6.95 ZX81 £4.50 SPECTRUM £5.50

**2. ROMAN EMPIRE.**

Your aim is to conquer the hostile countries surrounding Rome. Build armies, appoint Generals and fight campaigns. This challenging game takes full account of morale, fighting efficiencies, leadership ability, etc. 3 levels of play.

Price: ZX81 £4.50. Spectrum £5.50

**3. PELOPONNESIAN WAR.**

Set in Ancient Greece from 431-404 BC, covering the great War between Athens and Sparta. Your goal is a final victory over the Spartans but you will need all your skill in a combination of diplomacy and military force before you even stand a chance. 3 levels of play.

Price ZX81 only £4.50

**4. SAMURAI WARRIOR.**

Set 4 centuries before the film "Shogun" you can discover how you would have fared as a Samurai in 13th Century Japan. Face challenges from Samurai and bandits. Are you a survivor? Or will you be forced to commit ritual suicide? 7 levels of play. A most fascinating game.

Price: DRAGON £6.95 ZX81 £4.50 Spectrum £5.50

**5. WARLORD.**

Have you got the opportunism and strategic ability to control a village and army like the Warlords of Old Japan? Rule your subjects, trade for food, attack pirates and make raids for gold and slaves. As if this were not enough you must also face combat challenges from other Warlords and their Samurai and defeat attacks from their armies. Dragon version uses H/R graphics for a map of Japan for pirate battles and graphics for Samurai and land battles.

Price: DRAGON £6.95 ZX81 £4.50

## ATARI PRICES REDUCED!

We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

**ATARI 400**  
with 16K **£199**

**ATARI 400**  
with 32K **£248**

**ATARI 800**  
with 16K **£349**

## 400/800 SOFTWARE & PERIPHERALS

Don't buy a T.V. game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (£35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.

## FOR FREE BROCHURES — TEL: 01-301 1111

For free brochures and reviews on our range of electronic products, please telephone 01-301 1111. To order by telephone, just quote your name, address, credit card number, and order requirements and leave the rest to us. Post and packing is FREE OF CHARGE in the UK. Express 24 hour delivery available at an additional charge.

- **SHOP DEMONSTRATION FACILITIES** — we provide full facilities at our shop in Sidcup. Monday to Saturday 9am to 5.30pm (closing Thursday 1pm, Friday 6pm).
- **MAIL ORDER** — we are a specialist mail order company and are able to supply goods direct to your door.
- **MONEY BACK UNDERTAKING** — if you are totally unsatisfied with your purchase, you may return it to us within 15 days. On receipt of the goods in satisfactory condition we will give you a full refund.
- **PART EXCHANGE/SECOND HAND MACHINES** — we offer a part exchange scheme to trade in many makes of T.V. game for personal computers.
- **COMPETITIVE PRICES** — our prices, offers and service are very competitive. We are never knowingly undersold, and will normally match any lower price quoted by our competitors.
- **HELPFUL ADVICE** — available on the suitability of various computers.
- **AFTER SALES SERVICE** — available on all computers out of guarantee.
- **VAT** — all prices quoted above include VAT at 15%.
- **CREDIT FACILITIES** — we offer credit over 12, 24 or 36 months, please ask for details.

# TARGET

**RUNS ON A TI 99/4A IN 16K BY R. MATTHEWS**

You are the pilot of a jet fighter on a kamikaze mission. Your task is to bomb a city occupied by enemy troops and cause as much destruction as possible before your jet crashes into the flaming ruins. Enemy tanks are racing through the city streets and these must also be destroyed before

they manage to find shelter. They can only be hit when your bombs have cleared gaps in the buildings.

But all the time you are blasting away at the city below your jet is losing altitude — and it's only a matter of time before it crashes — so you have to move fast to complete

your mission.

Program notes: A1\$ to A9\$ define character shapes. Miskeying will not affect the running of the program — but it will produce some odd shapes! A variable A(31) is defined twice in line 130. This is unnecessary and one of them may be deleted before copying.

# Let Commodore expand your horizons.

VIC 20 is the finest home computer that money can buy.

And the better you get to know it, the more confident, adventurous and ambitious you'll become.

You'll want to take advantage of the vast range of VIC software: a superb and constantly-growing selection of programs, embracing business systems, entertainment, education and many applications in the home.

Every program in the series has been designed by experts, and chosen for its quality and value for money.

VIC business software covers a wide range of applications, including spread-sheet analysis, stock control, information handling and word-processing.

A mind-blowing range of games including Scott Adams' world-famous 'Adventure' series.

Advanced space games, including the sophisticated 'Omega Race'.

Learn subjects as diverse as English Language, programming, and biology.

And 'home' software ranges from IQ tests to Robert Carrier menus.

In addition, there is a range of VIC software, like programmers' aids and graphics packages—

to add to your understanding and enjoyment of computers and computing.

There's even a special 'VicSoft Club' for VIC 20 enthusiasts, with many advantages including special offers to club members.

and  
Soft'  
ding  
S.

VIC software will expand your horizons. And your mind.

PRICES RANGE FROM £4.99 to £24.95 INC. VAT.

## DEFEAT THIS WORDY HORROR

This relic (right) from the primordial past is in urgent need of taming before it leaves its dark unfathomed cave and starts chewing up fair damsels, post office towers and Clive Sinclair.

To do this, drop one letter from those used in the line above and arrange the remaining letters to form a word or words.

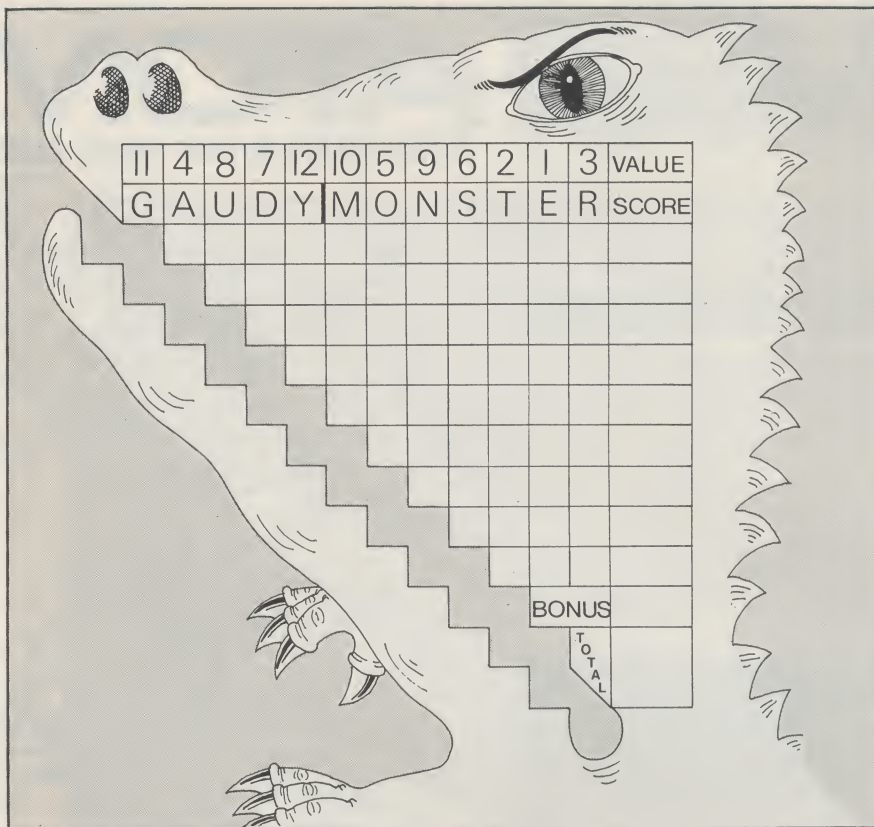

Words, to be valid fodder for our toothsome fiend, must be of three letters or more and must be bold type entries in *Chambers's Twentieth Century Dictionary, Revised Edition*.

Words must not overlap along the line and must be separated by a bar. A word once used must not be repeated on any subsequent line.

Each line scores the total of all the letter values which appear in it. The letter values are shown above the top line. So keeping "Y" in is worth extra points.

A bonus can be scored for each word which is of five or more letters and is equal to the length of the word; a five-letter word gains five extra points and so on.

When you have entered the score for each line add on the sum of your bonuses to give the final grand total — the greater that is, the more peaceful the leviathan.

## UNSCRAMBLE THE ONMIDOSE

This somewhat bizarre title is a direct indication as to just what is the problem below — dominoes have been scrambled.

Not that the event caused any grief to Ephraim Wheel, rather the opposite.

He was so delighted that his

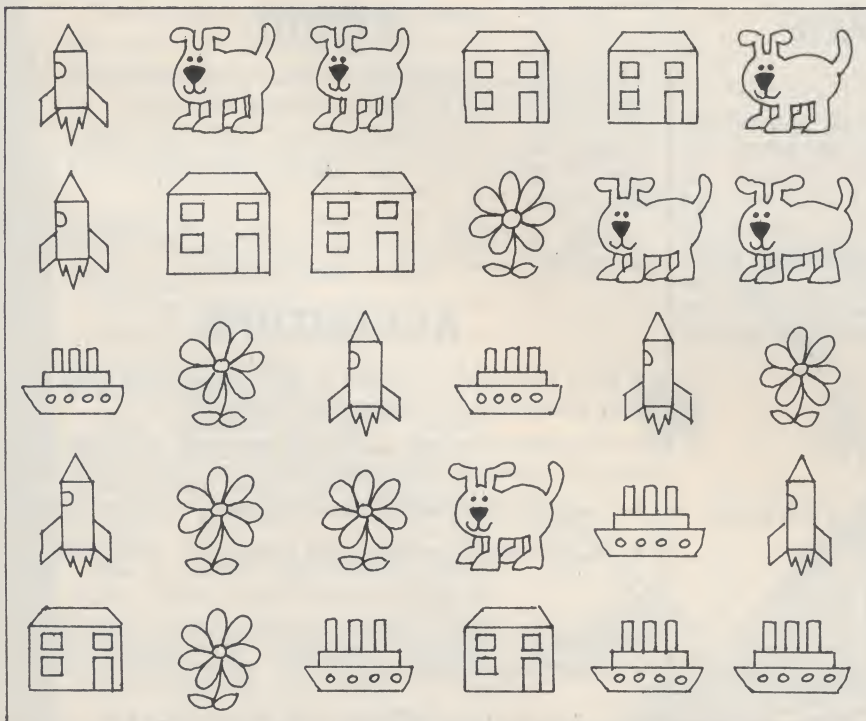

daughter, Daisy, had managed to arrange her complete set of picture pairs into a six by five rectangle that he quickly drew the layout for posterity.

It mattered not that the girl had paid scant regard to the usual rule that adjacent dominoes should have the same picture touching, at a few days over 18 months, it was a miracle to the proud father that geometric genius had manifested itself at so early an age.

Hence, as we have remarked, the quick drawing... Too quick, in fact, as Ephraim has omitted the lines which show the separate dominoes.

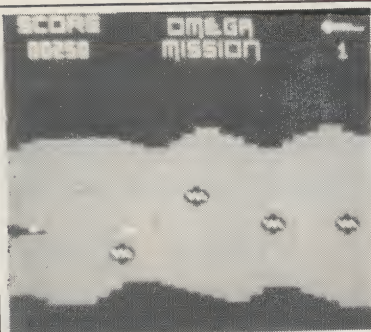

It is not too difficult a task to find the unique way in which the cards were laid out, bearing in mind that with 5 different pictures, all the different arrangements of possible pairs are present somewhere.

Can you draw the dividing lines and so complete the picture for Ephraim?

The solutions to these two puzzles and the winners of our November Mastermind competition can be found on page 11 of this issue. Try them before you look out an answer.

# PULLING

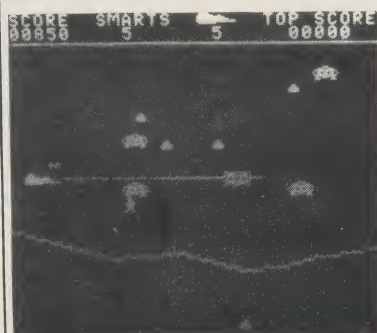

### OMEGA MISSION £7

The first and only version of the superb Scramble Arcade game. Moving landscape! Fly over mountains, through caves and tunnels. 5 different stages. Ground to Air Missiles, Fire Balls, Space Craft, Mutants and the narrow twisting Tunnel. Movement in 8 directions, laser cannon. Excellent COLOUR graphics (give Black & White on monochrome T.V.) mode 3a, Sound Effects. Top score.

### THE PROTECTOR £7

The most realistic version of this amazing Arcade game available for the Atom. Defend your humanoids from mutation and destroy the Aliens in this hyper fast, action packed game. Moving planetary surface, repeating lasers and smart bombs, thrust, warp, increasing Attack Waves, 6 types of Aliens, Sound Effects. Top score and excellent mode 4 graphics are some of the features in this exciting game.

# ATOM

ACTION PACKED M/CODE ARCADE GAMES

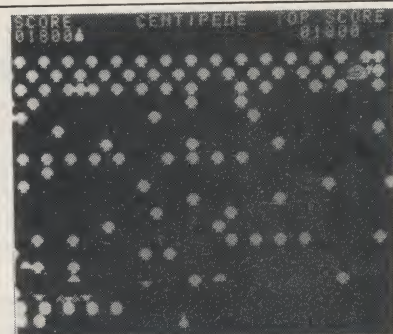

ALL 12K RAM

PRICES INCLUDE P&P. FAST 2 DAY DESPATCH

**micromania**

14 LOWER HILL RD. EPSOM. SURREY.

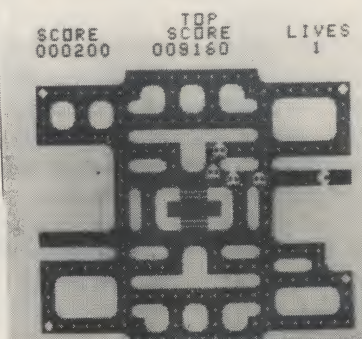

### CENTIPEDE £6

The first and only version of this popular Arcade game for the Atom. Shoot down the splitting centipede as it swirls through the mushroom field. Also inhabiting the game are Spiders, Bugs and Snails. The action increases until only skill and quick thinking can save you. Excellent high speed mode 4 graphics. Sound Effects and Top score.

### PUCKMAN £5

One of the best versions of this popular Arcade maze chaser game. Eat all the dots in the maze but watch out for the hungry ghosts! Eat an Energy Blob and the chase reverses. Each maze cleared brings a new one with faster ghosts. Excellent high speed mode 4 graphics, Sound Effects and Top score.

## FANTASTIC VOYAGE

(ZX81 16K ONLY)

This real-time graphics adventure set inside the human body was written by a lecturer in anatomy. You are injected into the blood stream in your miniature submarine. Navigate the arteries, veins and heart to the brain, where a blood clot must be destroyed. Features a real vascular map. You will be attacked by lymphocytes which must be destroyed using arcade game type graphics. Everything you do uses up precious energy. Three display formats — a lateral and frontal body scan plus blood vessel name, a close-up scan and a laser-sight for fighting lymphocytes.

ALL GAMES £5.95 EACH, 2 FOR £9.95, 3 FOR £13.95  
(ANY MIX) INCLUSIVE.

## AWARI

★ The ancient African game of logic. It takes 2 minutes to learn the rules but far longer to master the tactics.

★ Select the 'Goat-herd' level of play and it's an addictive game for children (8+) that exercises their minds — not their laser fingers.

★ Select the 'Witch-doctor' level and it's a threat to your sanity. We haven't beaten it and we wrote it!

## ADVENTURE

★ Over 200 places to explore in this machine code game using advanced data compression techniques.

★ No random elements — you will need skill, cunning and a sense of humour as you explore caves, forest and castles.

★ Evade ruthless pursuers and overcome a host of obstacles.

★ Multiple word commands and single letter abbreviations.

★★ Buy both Awari and Adventure and enter the 'Foilcade Challenge' competition. Details with cassette or send SAE.

# BRIDGE

BY ALAN HIRON

## DEALING WITH THE DOUBLE-DUMMY POSER

In my last article I talked about the possibilities of running an exhaustive search to tackle the play in the sort of bridge problem where 'you can see all four hands — the so-called — or rather misnamed — double-dummy problem.

As I had suggested, if the problem involves only five or six cards per player, then absolutely all the legitimate sequences of play can be inspected. As soon as you advance to larger numbers of cards (like thirteen per player?) then the computation becomes too massive for present day machines, even huge main-frames let alone a personal machine. And I am looking on the bright side!

The sort of problem that comes along in real life involves you — as declarer — seeing only dummy. If asked how best to play the hand, an exhaustive search would involve creating and testing all possible ways of distributing the opponents' twenty-six cards between them!

It all sounds impossible complex, but there are simplifying routes to be considered. Suppose the computer is set a problem involving all 52 cards but where the target is to make all thirteen tricks.

It would be completely lunatic to explore all of the avenues of play which started with the declarer managing to lose the first trick.

It is the old story — if you want to look at all the possibilities the programming is easy — it just takes a few centuries to run.

How infuriating to have a power failure in 2342 AD when one of your descendants was nearly there! But perhaps it wouldn't worry you too much!

But a more sophisticated program, taking many times longer to write, should reduce the size of the calculation by several, indeed many, orders of magnitude.

Try this very simple example — a double squeeze in a three-card ending:

Perhaps your bridge memories don't go back as far as mine but in the late 1930's Ely Culbertson sponsored Auto-Bridge. In other words, bridge for one player.

The idea was neat and simple — you slipped one of a number of master charts into a flat container with a number of metal hatches on the top, you opened your thirteen hatches and saw your hand. You decided on a bid, you opened another hatch to see if you had made the right bid.

If you hadn't, you read the manual to see where you had gone wrong and made the right bid instead. Then you opened your left hand opponent's first bidding hatch, found out what he had done, looked at your partner's bid and then your right hand opponent's bid. Now your next decision — right, carry on; wrong, correct — and so on.

Then the play started after you had reached the approved contract. You opened the first card hatch on your left and saw the opening lead, inspected dummy — thirteen more hatches to open. You carried on, logically

enough, by deciding on your play to each trick before opening the appropriate hatch to see if you were right or wrong.

I suppose it might have been thought of as the Charles Babbage contribution to computerised bridge.

Now back to the 1980's. After the personal computer that *plays* bridge, came a logical step. If you have your own machine then for a relatively small sum you can buy a plug-in addition to your store — ROM, of course — that contains the raw material of a large number of hands, rather exciting colour graphics, sensible bidding for the hands and sensible play.

The plug-in board — produced by Intelligent Software for Tandy or compatible machines — doesn't *play* bridge — it just sees if you can, for it knows the hands and has been pre-programmed to cope with whatever you try.

The release date is December 1. More details when I have had a chance to play with the package more thoroughly.

S A 3	S Q 10
H K	H none
D none	D A
C none	C none
S K J	S 2
H A	H none
D none	D K
C none	C A

With South on lead and clubs as trumps it is easy for the human — play the Ace of Clubs.

If West discards HA you are home and dry. So West parts with SJ, dummy with the new useless HK and now East is squeezed.

Here it was relatively easy to look at all the possibilities as they were as few.

But as South required *all* the tricks, it would be time-wasting to examine all the sequences of play starting with a low spade from both South and North.

You see the point? Far more programming but less computation.

You can try to be too sophisticated. You remember the story of the chess computer that made a silly looking move, watched by and sneered at by many top-ranking human players?

Only later analysis proved that the machine was right in the sense that any alternative would have lost more quickly.

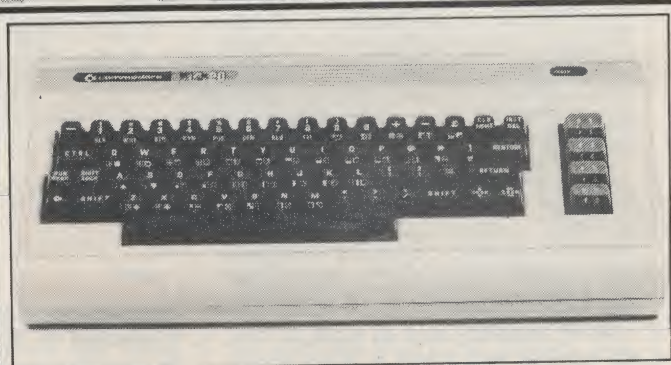

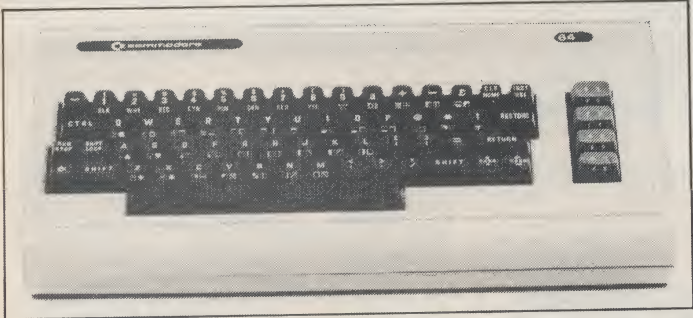

Who knows? Maybe exhaustive searches will still produce hitherto unknown and exciting plays on the bridge scene. Watch this space. *Computer and Video Games* hopes to bring you them first!

# MACHINE CODE

## LEARNING A NEW LANGUAGE . . .

We have already looked at some background material on binary numbers and the structure of a computer system. Although there will be more of this background material later on, this month we will be dealing with micro-processors and some, simple assembly language instructions.

To understand assembly language we need to look inside the micro-processor. Figures 1, 2 and 3 show the *internal registers* (memory locations and working storage) of the 6502, 6809, and Z80 processors.

Some registers hold an eight-bit binary number and others a 16-bit binary number, and all instructions use or operate on the contents of at least one register.

There are many differences between the three processors in the number, names and uses of the registers, but there are similarities among the main registers.

The Program Counter, PC, keeps track of the address of the instruction currently being executed, and is updated automatically every time an instruction is executed.

The Stack Pointer (S in the 6502 and 6809, SP in the Z80) is used to keep track of subroutine calls and returns.

Although these registers are very important in the operation of the processor, they can be ignored in elementary programming.

The most important registers to the programmer are the accumulator, A (or two very similar accumulators A and B in the 6809) and the flags (called P for Processor Status Register in the 6502, CC for Condition Code Register in the 6809, and F for Flags in the Z80).

The accumulator is used for performing arithmetic and logical operations, and although some of these operations can be carried out in other registers there are some operations which can only be carried out in an accumulator.

The flags record information about a binary number or about the result of a calculation, and are used in binary arithmetic and in conditional jumps (the equivalent of IF . . . THEN GOTO . . . IN Basic).

The other registers differ greatly between the three processors, and will be introduced slowly throughout this series.

The first instructions we are going to look at move data between the registers and the memory. You will remember

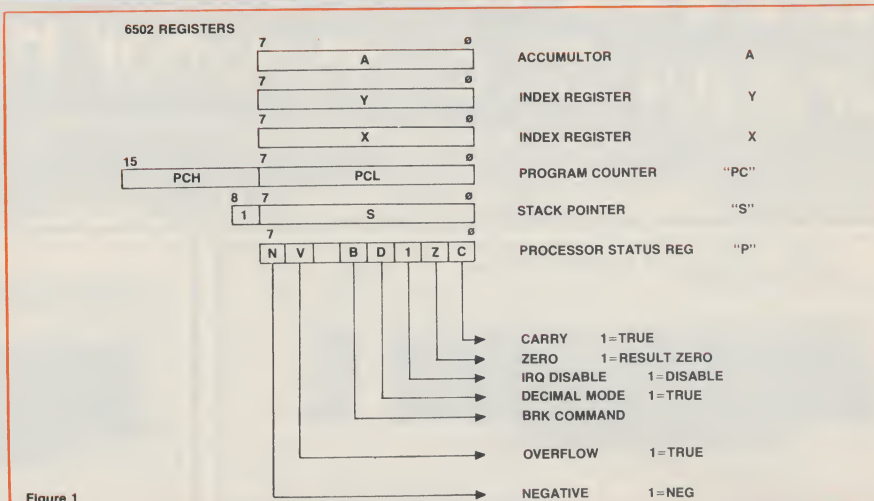

Figure 1

from last month that a memory location is selected by 16 address lines and can be specified by a 16-bit binary number (equivalent to a hexadecimal number from 0 to FFFF or a decimal number from 0 to 65535) and each memory location contains eight-bits of data (equivalent to a hexadecimal number from 0 to FF or a decimal number from 0 to 255).

Because the assembly languages are so different we will look at the processors individually.

## THE 6502 AND MNEMONICS . . .

The 6502 uses the mnemonics LDA, LDX, LDY (LD being an abbreviation for load) in instructions that fetch data from memory into the registers A, X, Y, and STA, STX, STY (ST being an abbreviation for STore) in instructions that fetch data from the registers into memory.

As well as the opcode mnemonic we need an operand to indicate the memory location involved. The 6502 has several *addressing modes*, which are methods of specifying the memory location or register involved in an instruction, and we will begin by looking at two of these addressing modes, *immediate* and *absolute*.

In immediate addressing the actual data is included in the instruction, and a hash sign, #, is placed in front of the data to show that it is immediate data. Thus, we may write:

```
LDA #22
LDA #$16
LDX #$10
LDY #$10
```

The assembly language allows us to use several different notations for writing numbers. Two of these are shown in

the examples above; decimal numbers, which are written in the ordinary way with no distinguishing marks, and hexadecimal, which are distinguished by being preceded by the dollar sign, \$. Thus 22 and \$16 represent the same number.

Note that, because the registers A, X and Y contain eight-bits the operand in an immediate mode instruction must be an eight-bit number (0 to FF hex, or 0 to 255 decimal).

The result of these instructions is to replace whatever was in the register by the value specified in the instruction. Obviously, we cannot use immediate addressing with the store instructions STA, STX, STY, because there is nothing to tell us where to store the number.

In absolute addressing we specify a memory location. The load instructions take the contents of the memory location into a register, and the store instructions put the contents of the register into the memory location.

The instruction LDA \$1000 takes the eight-bits from memory location 1000 hex and puts them into the accumulator, while STX \$1000 takes the eight-bits from register X and puts them into memory location 1000 hex. Note that we need four hex digits to specify an address.

There are also instructions to move data between the registers: TAX (Transfer contents of A to X), TXA (Transfer contents of X to A), TAY (Transfer contents of A to Y), and TYA (transfer contents of Y to A).

In all these instructions only the destination (register or memory location) is changed; the source data remains the same. Thus, LDA \$1000 leaves the contents of memory location \$1000 unchanged, STX \$1000 leaves the contents of the X register unchanged, and TYA leaves the contents of the Y register unchanged.

BY TED BALL

## GETTING FAMILIAR WITH THE 6809

The 6809 assembly language is very similar to the 6502 assembly language. We write decimal numbers in the usual way with no distinguishing mark, and precede hexadecimal numbers with a dollar sign.

We have the opcode mnemonics LDA, LDB, LDD, LDU, LDS, LDX, and LDY to load data from memory into the processor registers, and STA, STB, STD, STU, STS, STX and STY to store data from the processor registers into memory. The mnemonic must be followed by an operand to specify the memory location to be used.

Like the 6502, the 6809 has a number of *addressing modes* which allow the memory location or register involved in an instruction to be specified.

The simplest addressing modes are *immediate addressing* where the data is contained in the instruction, and *extended addressing*, where the memory location to be used is contained in the instruction.

Examples of immediate mode instructions are

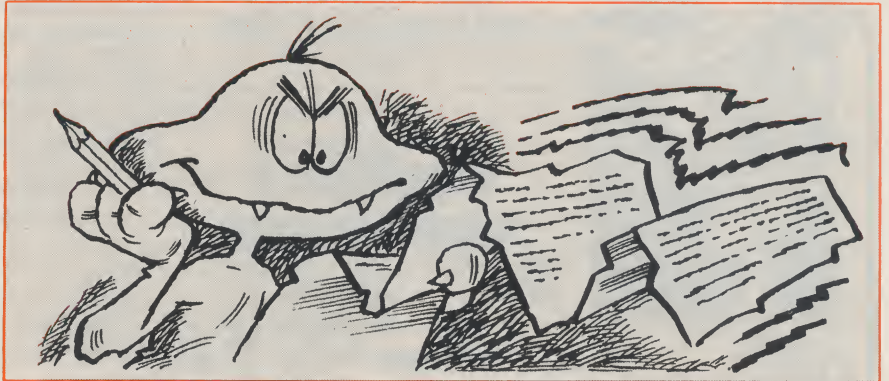

```
LDA #22
LDB #$16
LDD #$1234
LDX #$1000
```

The hash sign is used to indicate immediate addressing; decimal numbers are written with no distinguishing sign, and hexadecimal numbers are preceded by the \$ sign. Thus LDA #22 means "load the decimal number 22 into accumulator A", LDB #\$16 means "load the hexadecimal number 16 into accumulator B", and LDX #\$1000 means "load the hexadecimal number 1000 into register X".

The two accumulators, A and B, each contain eight-bits, so the operand must be an eight-bit binary number (equivalent from 0 to 255).

The 16-bit accumulator D is actually the two eight-bit accumulators combined, with A being the high order part and B being the low order part; the instruction LDD \$1234 thus means "load the hexadecimal number 12 into accumulator A and load the hexadecimal number 34 into accumulator B".

The operand in a LDD instruction must always be a 16-bit number, and if we were to write LDD 1, the result of this instruction would be to put 0 in A and 1 in B. The registers U, S, X, Y, are 16 bits long and take a 16 bit immediate operand.

Some extended mode instructions are:

```
LDA $1000
LDD $1000
LDY $1000
```

LDA \$1000 takes the eight-bits from memory location 1000 hex and loads them into accumulator A. A 16-bit load instruction cannot, of course, take 16-bits from an eight-bit memory location, so it uses two consecutive eight-bit memory locations.

Thus LDY \$1000 loads the Y register with the contents of memory locations \$1000 and \$1001, the contents of location \$1000 becoming the high order part of Y and the contents of \$1001 becoming the low order part of Y.

Similarly, LDD \$1000 loads the contents of location \$1000 into A and the contents of \$1001 into B.

The store instructions in extended mode work in the opposite direction

from the corresponding load instructions.

Thus, STA \$1000 puts the eight-bits from accumulator A into memory location \$1000, STD \$1000 puts the eight-bits from A into memory location \$1000 and the eight bits from B into memory location \$1001, and STU \$1000 puts the 16-bits from U into memory locations \$1000 and \$1001.

We cannot use immediate addressing with store instructions, as this is meaningless.

As well as the load and store instructions, which move data between registers and memory we have the TFR and EXG instructions which move data between registers.

The operand with these instructions has the form r1, r2 where r1 and r2 may be any two registers of the same length.

Thus we can write TFR A, B which transfers the contents of A to B leaving

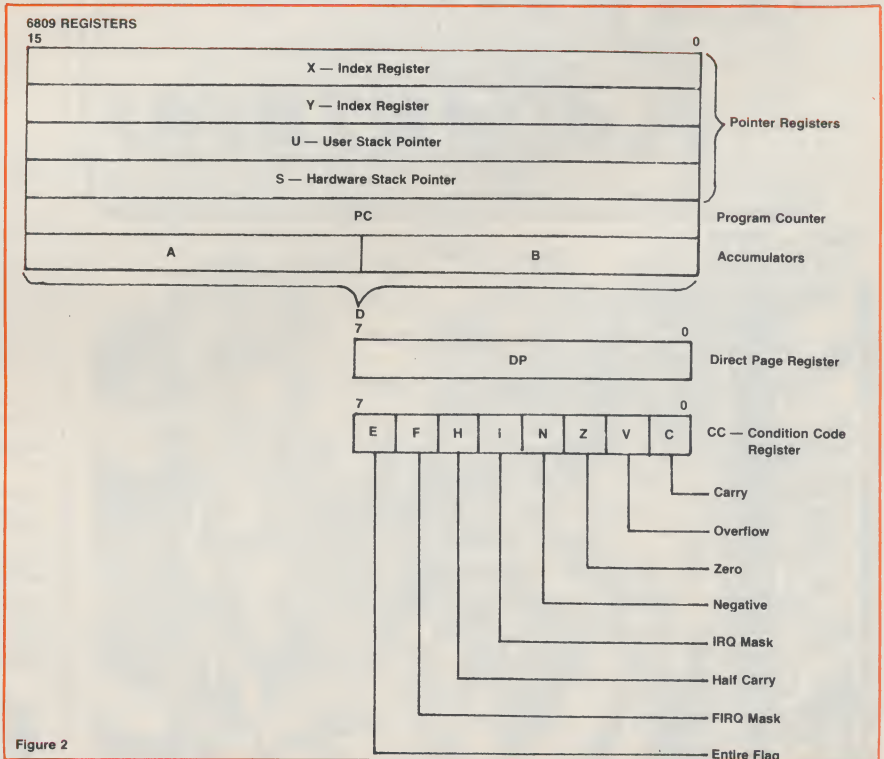

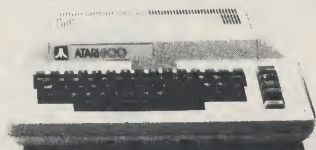

Figure 2

## WE PROUDLY PRESENT, FOR THE VIC 20

### THE INTERNATIONALLY SUCCESSFUL MYSTERIOUS ADVENTURES

These superbly written, Machine Code Adventures have been enjoyed by TRS80-VIDEO GENIE owners in Britain for well over a year now and are currently taking the U.S. by storm. The Author has now implemented these absorbing programs on the COMMODORE VIC 20 FITTED WITH 8K RAM PACK.

#### ALL ADVENTURES IN THIS SERIES INCLUDE:

Split screen display, Ultra fast Machine code response, Save game to cassette feature, Simple two word command entry, approx. 70 Locations to visit, 30 Objects to manipulate, 20 or more "problems" to overcome.

#### ADVENTURES PRESENTLY AVAILABLE:

- 1) THE GOLDEN BATON — venture into a strange province of danger and evil magic to retrieve the stolen Baton of King Ferrenuil.
- 2) THE TIME MACHINE — As a newspaper reporter you have been sent to the old house on the moors to investigate the eccentric Dr. Potter...
- 3) ARROW OF DEATH (Part 1) — In the first part of this epic Adventure you must find and destroy the source of the evil blight which has befallen your homelands.

These are the first three of a series which could ultimately total more than 20 Adventures.

**WARNING!** — Only supreme courage and low cunning can ensure eventual success on these dangerous missions.

#### NOW AVAILABLE:

Blackpool,  
Lancashire FY1 1NH  
Telephone (0253) 27091

A unchanged, or TFR X, Y which transfers the contents of X to Y leaving X unchanged, but we cannot have TFR A, X because A is an eight-bit register and X is a 16 bit register.

Similarly, we can write EXG A, B which exchanges the contents of A and B, or EXG U, Y which exchanges the contents of U and Y, but not EXG A, U.

## THE REGISTERS IN THE Z80

If you look at figure 3, showing the registers in the Z80 you will see that there are a total of 22 registers. We are not going to look at all these at once, but we will begin with the most important the accumulator A, and the registers B, C, D, E, H and L.

The instructions to move data from memory to registers, from registers to memory, and between registers all have the form LD destination, source.

There are several ways of specifying the destination and source, leading a number of different groups of LD instructions.

We can load data directly into a register by an instruction like LD A, 10 or LD H, 15H. Note that a decimal number is written in the normal way, while a

hexadecimal number must be followed by the letter H.

Thus, LD A, 10 loads the decimal number 10 into register A, and LD H, 15H loads the hexadecimal number 15 into register H.

We can load an eight-bit number (0 to FF hex or 0 to 255 decimal) into any of the registers A, B, C, D, E, H, L, in this way. We can also treat the register pairs BC, DE, HL as if each pair was a single 16-bit register, and write, for example, LD BC, 1000H. This loads the hex number 10 into B and the hex number 0 into C.

We can also load a register or register pair from data in memory. Thus, LD A, (1000H) loads the eight-bits from memory location 1000H into the accumulator A.

When we load a register pair from memory, we must, of course, use two memory locations. LD HL, (1000H) loads the contents of memory location 1000H into register L and the contents of memory location 1001H into register H.

Note that the high order part of the register pairs BC, DE, HL is B, D, H and the low order part is C, E, L, respectively, but when we load two memory locations into a register pair the order is reversed.

If we have 34H in memory location 1000H and 12H in memory location 1001H, the instruction LD BC, (1000H)

puts 34H in C and 12H in B, but the register pair BC will be treated as if it contained 1234H.

We can store data from registers into memory by instructions of the form LD (1000H), A or LD (1000H), BC. LD (1000H), A puts the eight-bit number from A into memory location 1000H, and LD (1000H), BC puts the 16-bit number from register pair BC into memory locations 1000H and 1001H, with the 8 bits from C going into location 1000H and the eight-bits from B going into location 1001H.

There is also a group of instructions of the form LD register 1, register 2 which move data between eight-bit registers; for example LD A, C moves the contents of C into A.

However, we cannot move data from one register pair into another register pair in a single instruction; if we wish to copy the data from BC into DE we must use two instructions, LD D, B and E, C.

A very important form of the LD instruction uses a register pair as a pointer to a memory location. For example, if HL contains 1000H (10H in H and 00H in L) the instruction LD A, (HL) puts the contents of memory location 1000H into the accumulator A, and the instruction LD (HL), A puts the contents of A into memory location 1000H.

Next month we will continue by looking at arithmetic instructions.

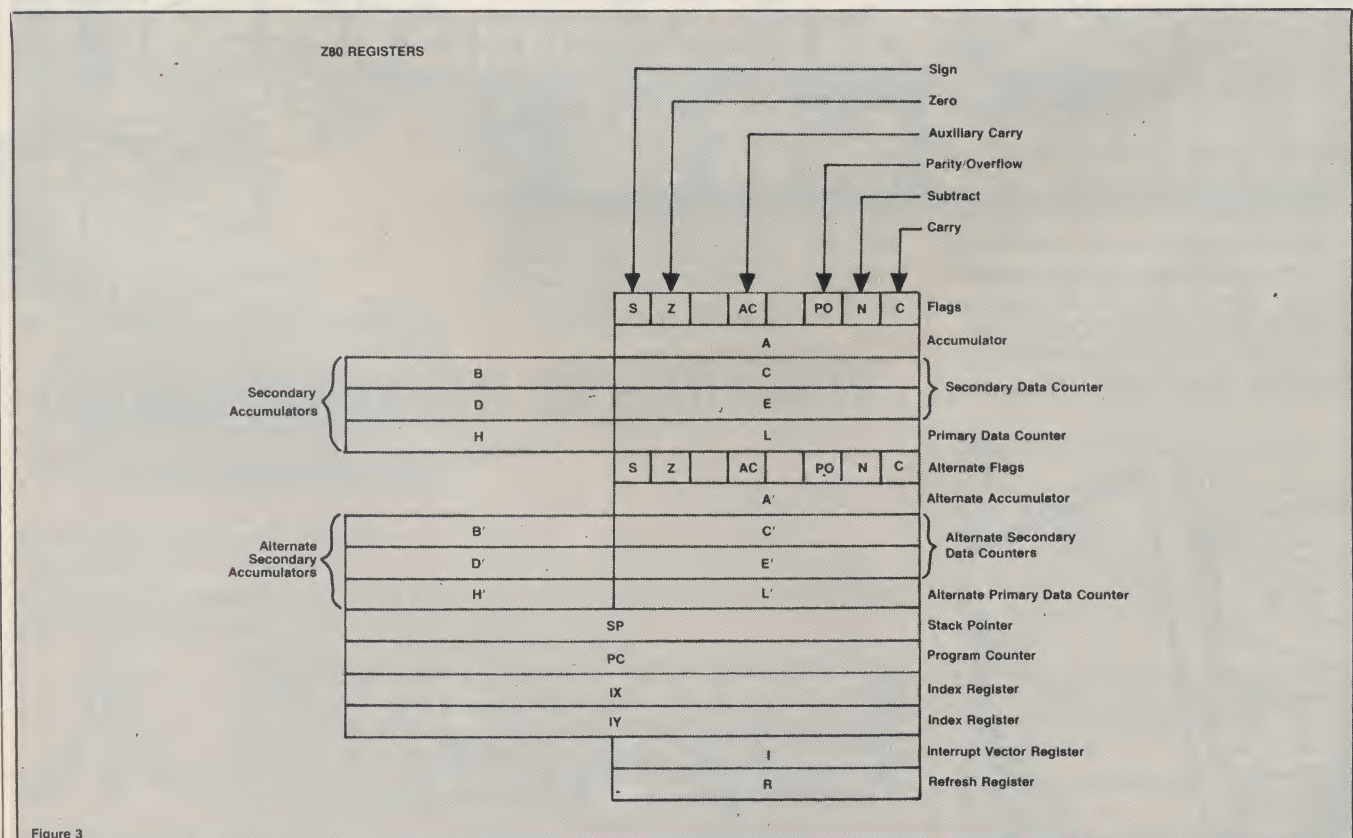

Figure 3

BY TED BALL

# Adventure

## PLOT OF THE GAME OF THE BOOK...

An adventure game is very similar to a story in that it must have a theme. The extent to which the game differs from a book is the degree of interaction with the plot.

This can vary from the player having no choice but to guess or deduce the correct commands, to allowing multiple choices of action at every turn.

In other words, the plot may branch endlessly. In a book, the outcome is fixed. In real life there is an infinite choice of actions, each with vastly differing results. An adventure game falls between these two extremes.

Perhaps this explains the popularity of Adventure, it is fiction in which the reader participates and affects the outcome.

Depending on the player's actions he can change the storyline to a certain extent.

A verb is the key to an action. We can look at all the different circumstances in which the verb may be uttered, and vary the outcome accordingly. The greater the number of different circumstances which can change the effect of using a particular verb the nearer the game will be to real life.

Of course, on a micro this will have a definite limit, but with cunning we can disguise that limit to a certain extent. Let us take as an example the word LOOK, often synonymous with EXAMINE in an adventure. LOOK AROUND has the

potential to produce a different reply for every location, and then some more, giving additional clues about hidden features, such as a secret exit, whilst LOOK HOLE may produce a reply like "I see a bottle of rum".

It may be arranged for the bottle to then be displayed as a normal visible object.

The outcome of the game will be affected, since it might be that without the rum a pirate will not be so helpful, and this might eventually be crucial to the game.

The program code to achieve these multiple replies can be relatively short:

```
3999 REM ***** LOOK (EXAMINE)
*****
4000 IF K2 <> (code for AROUND)
THEN 4500
4010 ON PN GOTO 4100,4110,
4120,4190 ... etc.
4100 LET Q1$ = "THERE'S A BOAT
ON THE HORIZON" : GOTO100
4110 LET Q1$ = "I SEE A SECRET
PASSAGE" : GOTO100
4120 ... etc.
4190 LET Q1$ = "I SEE NOTHING
SPECIAL" : GOTO100
```

This last line is the reply dreaded by all Scott Adams fans, and is the default line where no specific reply is required.

LOOK (object) implies EXAMINE and requires a different approach. First we must check whether the object is in the player's current inventory, or if it is visible in the player's current location. Assuming there are 30 objects in the game, then:

## BEWARE THE RIGELIAN HOUND

Strange Odyssey is yet another of Scott Adams' offerings, and has a science fiction theme. The hardy adventurer finds himself in a broken down spaceship somewhere on the surface of the moon.

A good space traveller will of course know what precautions to take and how to use low gravity to advantage. A good adventurer will need similar insight!

Armed with a phaser it is quite likely that the explorer will come to an alien room and discover the way to travel to strange worlds. He might visit, for example, an intergalactic zoo and become the prey of a Rigelian dia-ice hound — not a beast to endear itself to any but the most devoted of dog-lovers!

```
4500 IF K2 > 30 THEN 4800 : REM
SUBSCRIPT IN RANGE FOR 4510
4510 IF P(K2) <> 50 AND P(K2) <>
LN THEN LET Q1$ = "I DON'T
SEE IT HERE" : GOTO 100
4520 ON K2 GOTO 4530,4190,
4540,4190,4550 ... etc.
4530 LET Q1$ = "IT SAYS: BEWARE
THE SLEEPING DRAGON":
GOTO1000
4540 LET Q1$ = "THERE ARE 2
LEVERS — RED & GREEN" :
GOTO100
4550 ... etc
```

Note the use of the existing default line to avoid writing it twice. Line 4500 checks that K2 isn't greater than the highest permissible subscript set by the DIMension of the array P.

You can thus see that the limit to the different response to LOOK are set only by the computer memory available and the author's imagination!

**NEW**  
**SAVE IT!**

Only with **battpack**  
(Patent applied for)  
**£13.95 + £1.40 p/p**

**PROTECT YOUR PROGRAMMES WITH THIS RECHARGEABLE BATTERY PACK**

**AT LAST!** The answer to one of the major problems facing personal computer programmers and users; — **POOR MAINS SUPPLIES CAUSING HAVOC, WHILE YOU SPEND HOURS TRYING TO ENTER YOUR CAREFULLY PREPARED PROGRAMMES.**

Now Adaptors and Eliminators, who have produced nearly 70% of all ZX Mains Adaptors, bring you **BATTPACK** — a rechargeable 9v Ni-Cad battery pack and transient suppressor, housed in a complementary black ABS case that simply plugs into your ZX adaptor in seconds.

**BATTPACK** ensures the voltage into your ZX computer never drops below 9v, thereby eliminating the possibility of a programme crash because of a split second mains dropout! (One cycle is all it needs!)

**BATTPACK** also suppresses transients and RFI using carefully selected capacitors. Your ZX Adaptor keeps the **BATTPACK** at full charge even when in use — so its always ready for emergencies. Even in the event of a full power cut **BATTPACK** will run your ZX computer for at least 30 minutes giving you time to save your programme on a cassette or print a hard copy on your ZX printer.

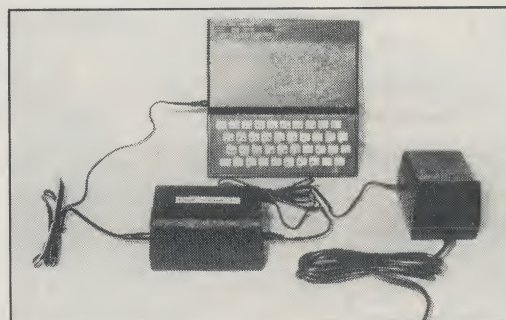

**BATTPACK** comes complete with all connecting leads and is ready for use.

**ORDER NOW — SAVE NOT ONLY YOUR PROGRAMMES BUT ALSO YOUR TEMPER!!**

# T-SHIRTS

Want to look tough? Well, when you wear a Computer and Video Games T-shirt no-one is going to kick sand in your face! There are three designs to choose from. One is discreet little number with the C&VG logo on the front in delicate shades of red and black. The Bugs feature large on our other two offerings. One features Snag Junior in glorious bright blue with the words "Watch out-there's a Bug about" writ large. Screaming Foul Up has managed to find his way onto our third shirt in brilliant yellow and green with the slogan "There's no polite word for something that bugs!"

The T-shirts come in four sizes, Extra Small, Small, medium and large, and cost £2.65 plus 30p for post and packing. Cheques and or PO's (not cash) should be sent to: Computer and Video Games T-shirt Offer, 10-12 Victoria Road, Northampton.

**W**arpath is set in a Wild West scenario. A group of troopers are making their way through Indian country to relieve a beleaguered garrison. They win if their flag is carried successfully to the gates. The Indians, on the other hand, are intent on removing the garrison from their territory. They win by capturing either the garrison's headquarters or the flag.

Whilst the troopers have the greater firepower, this is matched by the increased mobility of the Indians so that the game is fairly evenly balanced. It is a relatively simple wargame. The rules, by modern wargame standards, are not complex but despite this it can produce interesting situations.

This is your chance to change history and be remembered as the hero that saved Fort Cheraquick! Or perhaps you would prefer to be known as the Indian Chief that saved the West and kept his tribe out of the reservations.

In this series of articles I am going to explain some of the techniques used to develop my wargames using Warpath as a typical example. Although it was written for the TRS-80 Level II, it is intended to provide sufficient detail to enable it to be modified for any computer. As we progress we will introduce the rules of play and list further routines until we have a complete wargame. As well as taking part in an interesting project, it is hoped you will find the ideas helpful in your own programming.

First, an explanation is necessary. Warpath contains 174 lines in multiples of 10 (i.e. from 10 to 1740). To avoid any subsequent confusion, every line will be printed exactly as it appears in the program. This will mean that occasionally lines will include references to subroutines which, if they are not relevant to the current article, are not listed. To ensure that the program runs properly without them, I have simply

# WARPATH

*More than just a wargame. Ron Potkin's series develops into a thrilling wild west conflict but also teaches some advanced programming techniques.*

added a RETURN at the appropriate line with the remark, "STUB". See lines 860 and 950 for examples. These will eventually be filled out and completed.

For those of you who are unfamiliar with wargames, let me first describe the hex. Most games are played on a board divided into squares so that pieces may move in four or, or if you include diagonals, eight directions. But squares are a problem in wargames because a piece moving diagonally will, in fact, move further than a piece moving, say, North or West.

This difficulty has been overcome by dividing a map into regular hexagons, or "hex" for short (see figure 1). Whilst the number of possible directions is

reduced to six, you will see that all distances are equal. I have adopted the hex as standard in all my wargames with the exception of Turret and Track, which uses squares.

We are going to start by describing Bigscreen and Window. These are the basic elements of the program and were designed so that several wargames could be devised (*Kriegspiel II* and *Up Periscope!* use the same module). Instead of an area of 120 hex which fills the video screen, the map is held in a separate part of memory and only the relevant section appears on the screen. This large map is called Bigscreen and contains 31 rows of 128 print locations. The video is regarded as a Window

looking over a portion of the map.

Bigscreen is an array of 3968 bytes and can hold a map of 496 hex (see figure 2). The numbers represent the first print position for the pieces. Figure 3 shows the layout of the Window. It starts at the print location 132 and consists of 11 rows of 56 bytes leaving room for messages and the map co-ordinates. It displays at any time an exact image of a portion of the map.

You should examine both arrays carefully and, in particular, note the way that the hex are laid out. We will discuss them in more detail later when we look at the movement of pieces. In a program of this nature many of the routines are concerned with searching the hex.

= Educational Computing

Add it all up and what have you got?  
The **only** publication with comprehensive coverage of the educational computing scene. So whatever your responsibility in this field

**Educational Computing** should be at the top of your 'essential reading' list.

To be informed... be sure

Don't simply hope you'll discover a well-thumbed copy of **Educational Computing** in your library or staff room. Subscribe today and receive your own personal copy **10** times a year.

**Educational Computing**: The best publication in its field... by a long chalk.

Post the coupon below to: Educational Computing, MAGSUB (Subscription Services) Ltd, Oakfield House, Perrymount Road, Haywards Heath, West Sussex RH16 3HD. Please send subscription payments only to this address. Subscription enquiries Contact Veronica Harris on 04444 459188.

Please start me a subscription to Educational Computing and continue to send it to me until I cancel. I understand that I may stop my subscription at any time and you will refund me the balance.

I enclose a cheque for £10 (£22 overseas). Ten issues a year. Cheques should be made payable to Educational Computing.

Right now we have to try and relate the Bigscreen positions to the Window. If a piece is at location ML on Bigscreen, how do we decide what part of the map should appear in the Window? In the wargame, it is desirable that the current piece being moved be in the centre of the Window so that it can "see" in all directions.

An algorithm is needed which, given ML — the location on the Bigscreen, will calculate: N7 — the address of the top-left corner of the selected rectangle, and SP — the position at which the piece will appear on the screen. Unless the piece is near the edge of the map, SP will be 476.

The following routine will perform these calculations:

```
Z=128:R=MLAND127:Q=INT(ML/128)
IFR<28THENSP=132+R:N7=0ELSEIFR
>92THENSP=60+R:N7=72ELSESP=156:
N7=R-24
IFQ<6THENSP=SP+64*Q:RETURNELSE
SP=SP+320
IFQ>24THENSP=SP+64*(Q-25):N7
=N7+2560:RETURNELSEN7=N7+Z*
(Q-5):RETURN
```

Looks complicated, doesn't it? Try it. Type the lines in, INPUT various values for ML and PRINT out the values SP and

Figure 3

N7. Most of the routine is spent checking to see if the piece is near the edge.

Once we have made the calculation, the correct part of the map is transferred to the Window and after we have carried out the player's move, the updated image is transferred back to the map. It is, of course, very important that we do not disturb ML during this process.

Unfortunately, transferring the map to the Window or copying the Window back to the map is very slow in Basic and so we must use machine language to perform these functions. Never used this before? Well, don't worry; I am going to make it as straightforward as I can so that you can't go wrong.

Strings are used in the program to save memory. Compared with DATA statements and other methods of using machine language in Basic programs, strings are very efficient in terms of convenience, time and space. In general, an 80% saving is realistic — you can see this by comparing the length of lines 3000 to 3021 with the length of lines 1540 to 1560 which will eventually contain the DATA. However, strings do have disadvantages: the lines containing them cannot be edited or listed and neither 34 nor zero should be used since these have special meanings to the Basic editor.

In the Basic listing that follows we shall use DATA to create a string of machine language and then delete it from the program. For those of you that want to understand the machine language contained in the DATA, a section of the coding which performs the algorithm above is shown in figure 4. You can see that the second column matches the DATA statements.

The program contains a loader which converts the code held in DATA statements to strings and a driver to demonstrate the Bigscreen routine. It is important to fill X\$(1) with exactly 232 characters, X\$(2) with 33 and X\$(3) with 57. You will find that the editor will refuse to accept line 1540 in one shot (the limit is 240 characters including the line number), so type as much as you can and then enter the EDIT mode and press X. You will be able to add the additional characters at the end. Finally, make sure you save the program.

When you run it, there will be a pause while the strings are created. The program will stop if it discovers errors in the DATA lines. X\$(3) is used to clear the Bigscreen by loading each byte with 128. Do not use the space (or 32) if you intend using graphics since you cannot manipulate the pixels. X\$(1) is used to get the appropriate rectangle, a character is printed in the Window and then X\$(1) is used again to put it back.

Finally, the Bigscreen with its contents and co-ordinates is scrolled across the Window. Press ENTER to stop the scrolling.

All lines up to 1740 which are multiples of 10 are extracts from the wargame. Eventually, all other lines can be deleted but we will keep them until all the strings are complete. Finally, here

## MAKE YOUR CONTRIBUTION TO SPECIAL EDUCATION MORE EFFECTIVE

Robyn Frankham copes very well with her learning problems, thanks to developments with computers in special education. Like many other children, she now has the ability to communicate with the aid of microelectronic devices which help her to write essays, draw pictures and most important of all, to gain her independence.

Learning To Cope '83 — Computers in Special Education, is the second of this annual publication which presents the story of Robyn and how many other physically and mentally handicapped children and adults are coping with their futures. Tremendous progress is being made through the manufacture of specialised devices and through the dedication of teachers and parents.

Learning To Cope '83 looks at specialised computer hardware and software and brings you the latest developments in applications covering all aspects of special education. Read for yourself how committed people have developed and redesigned new and existing equipment to help those in special education help themselves.

We can all help if we care enough.

Learning To Cope '83 — Computers in Special Education £2

Please send me a copy of Learning To Cope '83 — Computers in Special Education. I enclose a cheque/postal order made payable to Educational Computing for £2 (including p&P).

are a few notes on some of the lines in the program:

Line 10 — Why do I perform this GOTO 760? I have learnt that it is a good idea to put my subroutines near the beginning of the program. There are two reasons for this.

● The interpreter searches for line numbers from the beginning of the program and so it is marginally faster. I experimented with this in a program on the ZX81 and found that I could save several seconds by moving a subroutine from line 9000 to line 20.

● It saves space. GOSUB50000 costs 6 bytes but GOSUB50 only costs 3. You will discover that I am a byte-miser and will try anything if I can save a few bytes as a result. You can see therefore that by jumping to line 760, I leave room for subroutines.

Line 190 — POKES U and U+1 with the value of P which must be between 0 and 32767. POKE is a marvellous instruction to try out on a friend, but wait until he has typed out a long program without a single SAVE!

Line 390 — O is the GET/PUT flag. If O=1 copy BIGSCREEN to WINDOW; if O=0 copy WINDOW to BIGSCREEN. Don't forget that although USR will

## WARPATH

to be continued  
next month

accept only one argument up to 32767, you can use compound arguments. In this case, I want to pass the variables ML and O. Since ML ranges from 0 to 3968 in steps of 8, I am able to use Bit 0 as the GET/PUT flag.

Line 440 — Obtain the address of the string in X\$(V). If your computer has VARPTR then rejoice! It's missing on the ZX81 which makes using machine language somewhat cumbersome.

Line 760 — Sets MEMORY SIZE. You must use CLEAR before and after GOSUB 190. This method avoids having to remember the size each time the program is run. Many types of Basic already have this built in.

Line 1110 — The machine language routines often call other routines. This would involve POKING new addresses each time the program is run and could cause problems with 34 and zero. Instead, a fixed jump table is used (see variable RU) and its address coded into the routines.

Once you understand the principles, experiment with the routine. Remember that ML must always be an even number otherwise it will upset the GET/PUT flag. Next month I shall continue with the Internal Board and the Piece Table which looks at the make-up of the cavalry garrison and indian tribe.

# CHRISTMAS ONCE A YEAR. GAMES ONCE IN A

## ACTIVISION®

video game cartridges for use with  
the Atari® Video Computer System® \*

### STARMASTER™

You are cruising through an empty part of the galaxy, but squadrons of enemy starfighters are threatening your four friendly starbases. You call up your Galactic Chart and plot a course to intercept. Warping through hyperspace en route you avoid deadly showers of meteorites. Now your gunsight is flashing and the enemy is near. You destroy them with your laser cannon but your computer read-out tells you that their fire has destroyed your shields and drained your energy

reserves.

Again you call up the Galactic Chart and plot a course to your starbase. You dock, and your damage is repaired, your energy banks replenished. Back you go to re-engage the enemy.

Now you have some idea of the astonishing realism and excitement of this Space Odyssey.

### CHOPPER COMMAND™

A convoy of trucks is ferrying vital medical supplies through the arid desert. You are flying escort in your helicopter gunship.

Suddenly a flight of enemy machines shows up on your long range scanner and you head in to attack with your laser cannon. They reply with deadly multi-warhead missiles. You start with two choppers in reserve, and add another for each 10,000 points scored, up to a maximum of six.

# S COMES BUT S AS GREAT AS THESE A LIFETIME.

You'll need to move very fast to destroy this enemy, for the more you shoot down, the faster they get. So even though your chopper is really manoeuvrable (a touch on the joystick sends it into an instantaneous 180° turn) you'll find the opposing helicopters and jets very difficult to defeat. It's by no means easy. It requires lots of strategy and lightning reflexes and that's why 'Chopper Command' is destined to become one of the all-time video game classics.

STARMASTER<sup>®</sup> and COPPER COMMAND<sup>™</sup>, just two of the great ACTIVISION<sup>®</sup> range of video game cartridges for use with the Atari<sup>®</sup> Video Computer System<sup>™</sup>. Each and every ACTIVISION<sup>®</sup> cartridge features an outstanding game concept and the quality of the graphics just has to be seen to be believed. So get along to your local video game stockist and see the range demonstrated.

### BBC Microcomputer or Acorn Atom

Acornsoft is the software division of Acorn Computers, designers and manufacturers, of the BBC Micro and Atom. We know better than anyone the capability of the machines, we know how to get the very best from the hardware. And we have produced a range of exciting games, exacting business and useful household software.

### The Biggest Range Available

Acornsoft software ranges from authentic arcade games like Snapper to Algebraic Manipulation to Desk Diary to other languages like FORTH and LISP. Striking colour, amazing sound effects and powerful

graphics are all used to the full. And it does not stop there. There is a complete range of manuals, accessories and plug-in ROMs.

### Free Brochures

Just clip the coupon or write to us and we will rush our catalogue absolutely free. Can't wait for the post ring 01-930 1614 now! Don't delay - do it today. Let Acornsoft help you get the best from our machine and open the doors to your imagination.

Acornsoft and Atom are registered trade marks of Acorn Computers Ltd.

# MYSTERIOUS ADVENTURES

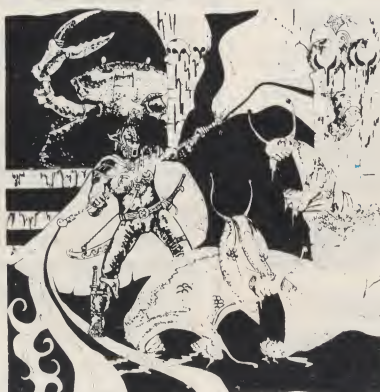

Join the growing band of Adventurers who are enjoying these absorbing and stimulating programs. Step into another world of Fantasy, Magic, Mystery and Sorcery. Only your wits and cunning can ensure success in these scenarios!

FOR BBC MICROCOMPUTER  
MODELS A & B\*

- WRITTEN IN ULTRA-FAST MACHINE CODE.
- SAVE GAME FEATURE.
- SPLIT SCREEN DISPLAY.
- SOUND AND GRAPHICS ON ADVENTURES 5, 6, & 7.

1. THE GOLDEN BATON — Venture into a strange province of Sorcery and Evil Magic to recover the Golden Baton, a priceless artifact whose powers are said to bring great Health and Prosperity to the Land.
2. THE TIME MACHINE — As a Newspaper reporter you are sent to investigate the eccentric professor who lives in the old house on the Moors. What is his secret and why is his house now deserted?
3. ARROW OF DEATH (Pt. 1) — A blight has fallen on your homelands, the Baton has become tarnished and now radiates a malevolent aura of Evil. Your mission is clear — trace the source of this Evil and destroy... or be destroyed. This is the first part of an Epic Adventure although each part can be played as a stand alone scenario.
4. ARROW OF DEATH (Pt. 2) — You now have the means to destroy your enemy... but you are far from home and this land is strange to you. Can you cope with the deadly perils which approach you and have you the strength to see your mission through to the final conflict?

5. ESCAPE FROM PULSAR 7 — Alone on a gigantic Space-Freighter... The rest of your crew have died horribly at the hands of a mutated Zoo-Specimen. Your only chance of escape is to reach the Frail Shuttlecraft. But the lurking Monster is hungry and you are the only food it has left...
6. CIRCUS — Your Car has run out of Petrol on a lonely road miles from habitation. As you trudge reluctantly down the road in search of help you are suddenly confronted by an amazing sight... in a nearby field is a Huge Circus tent! But this is no ordinary Circus as you will soon discover...
7. FEASIBILITY EXPERIMENT — Far across the gulfs of time and space, a dying race of super-intelligent beings search the Universe for a Hero to save their existence... At length their thoughts turn to planet Earth. You are chosen to be their saviour in a bizarre scenario where death is a mere thought away...

\* Adventures 5, 6 and 7 require 32K RAM.

Each adventure comes attractively packaged for just £8.95 inc.  
Now in stock for ATARI 400/800 £12.50.  
Available soon for ZX SPECTRUM, ZX81 (16K), APPLE II.

## IN-BETWEEN THE LINES

To produce graphics that move, a technique known as "in-betweening" can be used to automatically give the stages in an animated sequence.

As its name suggests, when given starting and finishing pictures, the technique will provide all the frames in between, and in the correct order. This method has been used in one form or another to help automate the production of cartoon films.

Computers have been adopted to relieve artists of the routine tasks of creating the in-between frames for many sequences.

To begin with a simple example, the frame that is half way between a square and a tall thin rectangle can be constructed as shown in figure 1. The dashed lines show the paths from the points on the first frame to the corresponding points on the last frame. The frame that is half way between the first and the last is virtually half way along these paths.

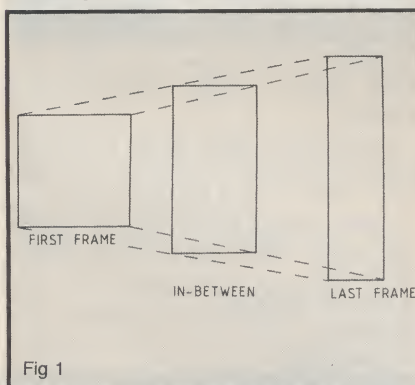

Fig 1

The in-between frame in this example has the shape that we would expect. It has been produced entirely by geometric means, and any number of in-between frames could have been generated in essentially the same way. It only remains to develop a program to carry out the same process.

In writing the program, we must first decide how a picture is to be stored, since we must provide the initial and final pictures. We can do this by storing the column and row positions of every point that has to

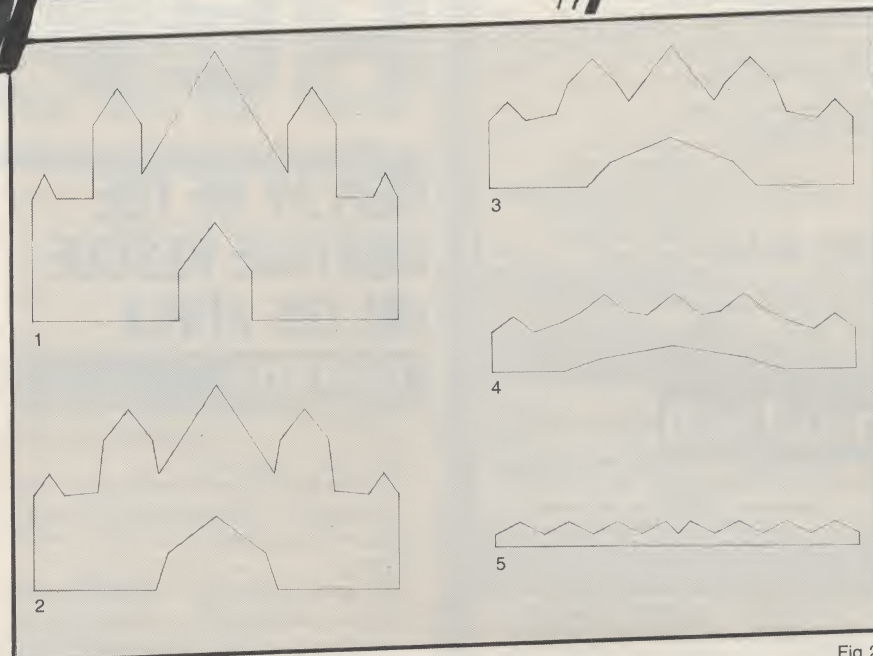

Fig 2

be joined up in order to draw the picture in two arrays.

We shall store the column and row positions respectively for the first picture in the arrays XF and YF, and for the last picture in the arrays XL and YL.

The following program will then draw the first frame, an in-between frame half way between the first and last frames, and then the last frame. It assumes that the frames are each drawn by joining 25 points, but this number can be changed throughout to any other.

```

10 DIM
   XF(25),YF(25),XL(25),YL(25)
20 REM ENTER COLUMN AND
   ROW POSITIONS
30 REM FOR FIRST AND LAST
   FRAMES
100 REM DRAW FIRST FRAME
110 MOVE XF(1),YF(1)
120 FOR J=2 TO 25
130 DRAW XF(J),YF(J)
140 NEXT J
200 REM DRAW IN-BETWEEN
   FRAME
210 MOVE (XF(1)+XL(1))/
   2,(YF(1)+YL(1))/2
220 FOR J=2 TO 25
   230 DRAW (XF(J)+XL(J))/
   2,(YF(J)+YL(J))/2
240 NEXT J
400 REM DRAW LAST FRAME
410 MOVE XL(1),YL(1)
420 FOR J=2 TO 25
430 DRAW XL(J),YL(J)
440 NEXT J
    
```

The program can be developed further to draw any number of frames in between the first and the last. The program is written so that the user can enter the number of in-between frames that is required. The program is obtained by replacing all the lines with line numbers in the two-hundreds in the previous program with the following segment.

```

200 REM DRAW ANY NUMBER
   OF IN-BETWEEN FRAMES
210 INPUT "NUMBER OF IN-
   BETWEEN FRAMES",NF
220 FOR I=1 TO NF
230 X=(XF(1)*(NF+1-I)+XL(1)*I)/
   (NF+1)
240 Y=(YF(1)*(NF+1-I)+YL(1)*I)/
   (NF+1)
250 MOVE X,Y
260 FOR J=2 TO 25
270 X=(XF(J)*(NF+1-I)+XL(J)*I)/
   (NF+1)
280 Y=(YF(J)*(NF+1-I)+YL(J)*I)/
   (NF+1)
290 DRAW X,Y
300 NEXT J
310 NEXT I
    
```

The sequence shown in figure 2 was produced with this program. In order to generate realistic sequences, the initial and final frames should not be too dissimilar. However, when very different frames are used for the first and last ones, some very interesting, and sometimes artistic, results can be obtained.

ZX81	Spectrum	BBC	VIC

## REPLAY OF THE HOSTAGE RESCUE ON THE APPLE

### CHOPLIFTER

Choplifter is the top selling game in the US for the Apple right now.

In it you play the part of a helicopter pilot on a mission to rescue hostages trapped inside enemy barracks deep inside hostile territory.

The game has obvious associations with the Iranian hostage affair with the helicopters crashing in the desert, and the hostages running helplessly towards the helicopter, with enemy tanks in hot pursuit. No mention is made of the affair of course in the interest of good taste, but whatever Choplifter's associations it is undoubtedly an impressive game.

The graphics are superb. The running motion of the hostages has been excellently simulated as has the flight of the helicopter.

Each time you rescue a hostage the

computer emits a high-pitched bleep telling you that the hostage is safely aboard.

You can only carry sixteen hostages without overloading the chopper so you will have to make more than one sortie into enemy territory.

The number of hostages rescued and tanks destroyed is recorded at the top of the screen.

Advanced pilots will have to deal with jet fighters called up by the enemy when a chopper pilot is being a little too successful in liberating the hostages.

The game is best played with joysticks although the reviewer played quite an interesting game using paddles. The helicopter can fly backwards forwards and sideways — leaning into a dive most realistically. It is also quite difficult to control and will take you some time to master just as a real helicopter would.

Choplifter is manufactured by US Apple games specialists Broderbund. The game is imported into the UK by SBD Software of Richmond and can be purchased at £19.95 plus VAT from the London firm.

## THIS ONE WILL GO DOWN FIGHTING

### GOLDEN GLOVES

Golden Gloves is all about the noble art of boxing. You can either take control of a boxer and fight a friend or the computer.

The computer will also fight an exhibition match with itself.

After naming your boxer the screen switches to a view of the ringside. Your fighter is in the left hand corner. The bell rings and you come out fighting.

You guide your boxer with the joystick. Moving it left or right moves your boxer across the screen. Pulling it down makes him duck and pushing it up makes him unleash his best uppercut. Pressing the trigger button allows him to jab.

The computer boxer — Rocky — is a mean and hard hitter. You will have to be on your toes to avoid the knockout.

Indeed it takes a good fighter to last more than one round with him. If you do get knocked down the count starts and if you are still on the canvas at ten then you have lost and you are asked for a rematch.

If you manage to avoid a knockout and go through the three, two minute rounds then the winner is the player with the most points. These are awarded for the number of punches that are landed and the number of times your opponent has been on the canvas.

Golden Gloves is a colourful game and

the figures of the boxers are nicely animated. However I think I would tire of it quickly.

It was very difficult to get beyond the first round let alone the third and it seemed all too easy to get a knockout.

Golden Gloves is for the Atari 400/800 and costs £20.50 from Allrian, Hayes, Middlesex

## DEFINITELY NOT THE BEST GAMES IN THE WORLD

### ICL GAMES PACK

ICL Games Packs numbers one to four for the Sinclair Spectrum are proving to be consistently unpopular with the C&VG review team.

Games Pack Three received a mere two out of ten for playability in these review pages together with some particularly harsh criticism of the games graphics. This month we test the playability and value for money of Packs One, Two and Four.

Games Pack One features four games previously available for the ZX-81. The best of these is Racetrack a familiar steer your car around the racetrack type game.

Labyrinth is a very poor maze game and can only be recommended to people who enjoy improving games.

Martian Knockout is the token action space game on this pack. I say token because the game is about as playable as a Frisbee in a hurricane.

Skittles is the final offering on Games Pack One and if you are inclined to think that this may be a cheaper way of playing the game then forget it.

## AN IMPRESSIVE ARCADE CLONE

Airstrike is a very well executed derivative of the popular arcade game Scramble.

The object of the game is to pilot your spaceship through underground caverns while avoiding numerous obstacles that are placed in your flight path.

The first obstacles to be overcome are surface to air missiles and the occasional floating mine. On your way through this part of the cavern you can pick up more ammunition and fuel. In the second part of the cavern you may have to deal with a whole series of floating mines.

Once through this part you come across a series of airlocks. The only way to get past these is to shoot the middle out of them and manoeuvre your craft through the resulting hole.

Games Pack Two kicked off with Galactic Invasion a game that is practically identical to Martian Knockout.

Drop a Brick, the second game on this pack is a very poor attempt at the popular video game — Breakout.

Colour Doodle is a so so children's colouring game.

The saving grace of Games Pack Two is the final game, Train Race. This is a gambling game for three players with each player picking a train of a certain colour.

Games Pack Four was the best of the three I tested. Docking the Space Ship is a fairly mediocre version of Lunar Lander.

Journey into Danger is much better. This is a mini-Adventure complete with all the features which you would normally associate with a much larger program.

Invasion from Jupiter is a pretty poor space shoot-out game.

The Great Escape is the final game on this cassette and good fun it is too.

### Games Pack One

### AIRSTRIKE

Just to make things a little more exciting you may also come across the occasional fighter trying to shoot you down.

Each level has a different colour and your craft carries less ammunition due to the higher gravity.

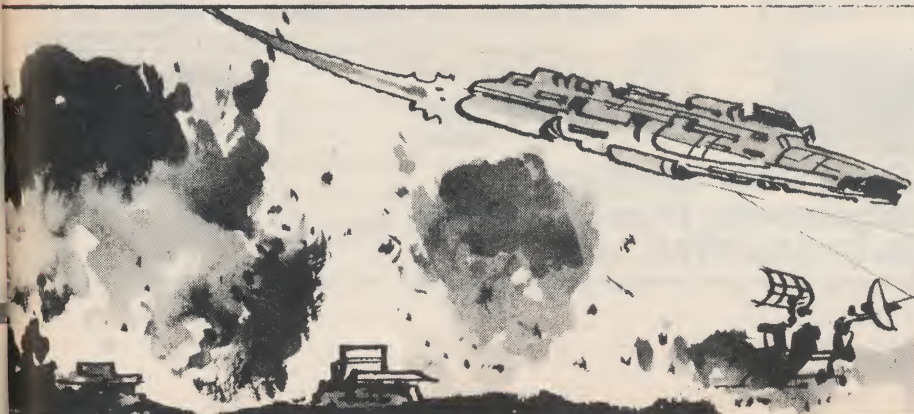

This really is a most impressive game and the English Software Company are to be congratulated.

Airstrike is available from Gemini Electronics of Manchester at £19.95. The game runs on an Atari 400 and 800 in 16K with a disk version also available.

# ZX81 & SPECTRUM KEYBOARDS COMPLETE WITH LUXURY CASE FOR ONLY £37.95 INC. V.A.T.

These highly professional keyboards incorporate executive buttons similar to those used on top-quality computers. A repeat key facilitates entering of characters much faster than is possible with a conventional keyboard, thus making it particularly ideal for cursor control and erasing. Attractive black plastic moulded case. Supplied with 12" flexible ribbon cable for connection into your computer. *Not to be confused with toy keyboards currently on the market. Other attributes as reviewed by Tim Hartnell, ZX Computing/Interface.*

## OTHER KAYDE HARDWARE/SOFTWARE

### ZX81 4K GRAPHICS BOARD

The KAYDE Graphics Board is probably our best accessory yet. It fits neatly inside your ZX81. It comes complete with a pre-programmed 4K Graphics ROM. This will give nearly 450 extra graphics and with the inverse makes a total of nearly nine hundred.

The KAYDE Graphics Board has facilities for either 2K of RAM (for user definable graphics) 4K of ROM or our 4K Tool Kit Chips that will be available shortly. All the graphics are completely software controlled therefore they can be written into your programmes. Here are a few examples:

A full set of space Invaders —  
Puckman — Bullets, Bombs —  
Tanks — Laser Bases and  
Alien Ships  
NO EXTRA POWER NEEDED

**£29.95**

### 16K GRAPHICS SOFTWARE

PECKMAN — The only true ZX version of the popular arcade game.

SPACE INVADERS — The best version available anywhere.

CENTIPEDE — *"In all I think this is the best presented moving graphic programme I've yet seen"* —  
**Phil Garratt, INTERFACE**

**£5.95 each**

Graphic Software can only be used with a Graphics board

### RAMPACKS . . . With a difference

Kayde Rampacks are exceptionally stable. They don't over-heat, lose memory, wobble or cause you to lose your program. They are fully compatible with all accessories and need no extra power, and therefore will run efficiently on existing Sinclair power supply. Simply plug them straight into the user port at the rear of your computer. Top quality massive add-on memory only:

**£29.95 for 16K ZX81 Rampack and  
£48.95 for 32K Spectrum Rampack**

**FLEXIBLE RAMPACK RIBBON CONNECTOR  
only £12.95**

### 16K 81 SOFTWARE

3D/3D LABYRINTH

— A cubit maze that has corridors which may go left, right, up and down. **£5.95**

4K Tool Kit full of utilities to aid the programmer in constructing and de-bugging E. PROM version for use with graphics ROM. **£9.95**

## HOW THE MICRONET 800 SERVICE WORKS:

Most micros connect by a standard DIN plug and coaxial cable to an adaptor. They're portable, so you can use the system wherever you put your computer and telephone.

Simply dial Micronet's number and enter your subscriber number into the keyboard. A 'welcome to Micronet' message appears on the screen. You're on-line to one of the world's largest databases.

## PRESTEL

### MICRONET 800's

thousands of ideas—packed pages—games, education, business software, club news and information.

When you have all the information you need—or you've finished 'downloading' software to your computer's memory—just switch off the telephone link at your keyboard and replace the receiver.

# **AN A THINK-TANK.** **AN A SOFTWARE HOUSE.** **AN YOU'D EXPECT.**

Whether you bought your computer for games, business, or education, you can spend a lot of time wondering what to do with it. And then spend a lot of money on packaged games and applications software.

NOW you can bring your computer to life – economically – by joining the amazing new MICRONET 800 service: a vast database with hundreds of FREE games, plus business and education software, computer news, special offers and 'big prize' opportunities for you to compete against the system – and win!

MICRONET 800 is packed with ideas and information. And there's no waiting – you get programs straight down the phone line! Updates on operating systems... school and college programs

...gobble man... invaders... business packages. They're constantly renewed. And hundreds of them are free: you simply turn on your micro, dial up MICRONET 800 and LOAD.

Sounds expensive? Here's the surprise!

All you pay for is a low-cost adaptor (in most cases just £49) to link your computer to your telephone, plus a MICRONET 800 subscription of about £1 per week. Then, via your computer and telephone line you will be able to access over 30,000 ideas-packed 'pages' of the MICRONET 800 service, and call down the software you want to your own computer! Look at just a FEW of the services already available on Micronet for you to call on:

● **Free Telesoftware:** Indexed by subject and by name of micro, a huge selection can be loaded down onto your computer.

● **Educational Exchange Library:** Schools and colleges are already preparing to display programs written by students and teachers, so many can benefit from them easily and economically.

● **Applications Guides:** Quick-reference guide by subject and by micro name shows you available applications software. You can move from the guide to further details held on the system if you wish.

● **Demonstrations:** Check through the features of the software packages that interest you – privately and without obligation. Order only if you're sure it's what you need.

● **Purchase 'Downloadable' Software:** Many 'telesoftware' programs can be bought from the system and loaded down direct to your micro. But

don't worry – there's plenty of warning if any MICRONET service you're planning to use carries a charge.

● **Electronic Mail:** A mailbox service on Prestel allows you to exchange messages with other Prestel or Micronet users. Messages are held securely and only you can collect them.

● **Bulletin Board:** For an additional subscription you can operate your own bulletin board – club news, for example, like tips, swap-shop for second-hand items and so on.

● **Phone-In:** If you're away from your computer but need to send a message to another Micronet user – call the Micronet 800 service by phone and we'll send the message for you.

● **Prestel:** Over 200,000 pages of information on British Telecom's established service. Facts and advice on finance, business, entertainment, features

and even direct bookings for travel, holidays, etc.

● **Product and Service Guide:** A constantly updated reference source – covering product comparisons, software reviews, dealership and price details and all the 'best buy' information.

● **Action Advertising:** Includes features, just like a magazine, including jobs and classified ads. If you've read an article that interests you, through MICRONET you can find out about the manufacturer, the dealers, the prices, and even order the product via your micro!

● **User Group News:** The Amateur Computer Club and many others like ALCC, BASUG, ICPUG, TUG, TRS 80 UG, will maintain their news and reference service on Micronet.

● **Big Prize Games:** Micronet offers a range of games and quizzes to keep you entertained and involved – and there'll be big prizes too!

## **SOUNDS FANTASTIC? THAT'S JUST THE START!**

MICRONET 800 is a completely new service and we'll be adding to it all the time. Find out more about what Micronet 800 has in store for

you: return this coupon TODAY and we'll send you a FREE FACTS FOLDER on Micronet 800 services and details of how you can join!

**IT BRINGS YOUR  
COMPUTER TO LIFE!**

Send to: MICRONET 800, Petersham House, 57a Hatton Garden, London EC1B 1DT.

☐ Yes, I am interested in the MICRONET 800 service. Please keep me in touch with developments and send me details of the low-cost Micronet 800 adaptor.

☐ I am interested in earning money on software I develop for the system.

I am interested in: Home uses ☐ Business uses ☐ Educational uses ☐

# ZX81 GAMES

from

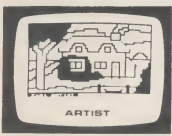

**J.K. GREYE SOFTWARE LTD**  
THE NEW GENERATION SOFTWARE HOUSE

"Without question the finest machine code games available today".....J.N. ROWLAND Product Manager for W.H. SMITH.

**GAMESTAPE 1 for 1K** ..... only £3.95  
10 Games incl. ASTEROIDS, UFO, CODE, BOMBER, GUILLOTINE, KALEIDOSCOPE, etc.  
**PROBABLY THE BEST VALUE 1K TAPE AVAILABLE.**

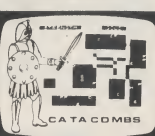

We've done in 1k, games which some of our competitors require 16k to do!

**GAMESTAPE 2 for 16K** ..... only £3.95  
**\*STARFIGHTER** Superb machine code Space Battle. Set against a background of twinkling stars, with stunning explosions - if you can hit the enemy!  
**\*PYRAMID** Can you move the Pyramid? Make a mistake and it will collapse! A Thinkers game.  
**ARTIST** The ultimate Graphic Designers aid. 8 Directions, 10 Memories, SAVE, COPY, RUBOUT, CLS, etc.

**GAMESTAPE 3 for 16K** ..... only £4.95  
**\*CATACOMBS** A Multi-Level Graphics Adventure. Each level can contain up to 9 Rooms, 8 Passages, 7 Monsters, Food, Gold, Traps, Phantoms, an Exit (to the next level), and there's an infinite number of levels.  
NOTE: . . . This is NOT one of the necessarily limited text Adventures as sold elsewhere.  
"An excellent additive game which will keep you amused for hours." . . . COMPUTER & VIDEO GAMES.

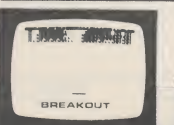

**GAMESTAPE 4 for 16K** ..... only £4.95  
**\*3D MONSTER MAZE** The Game to Top All Others. Unbelievable Graphics! Can you find your way through the Maze? The EXIT is there somewhere, but then so is a T.REX, and its after YOU! All in 3D (the T.REX will actually run towards you in full perspective!), you've never seen anything like this before!  
"3D MONSTER MAZE is the best game I have seen for the ZX81" . . . COMPUTER & VIDEO GAMES

"If I had to choose just one programme to impress an audience with the capabilities of the ZX81, then J.K. Greys's 3D MONSTER MAZE would be the one without doubt" . . . ZX COMPUTING. "Brilliant, brilliant, brilliant!" . . . POPULAR COMPUTING WEEKLY

**GAMESTAPE 5 for 16K** ..... only £4.95  
**\*3D DEFENDER** The Ultimate Space Game. Super fast Machine Code 3D version of the Arcade favourite. You have to save your home planet from the marauding Alien Spacecraft. This is all in 3D, your viewscreen shows you the view out of your fighters cockpit window. The backdrop moves when you turn, or fly up or down (8 flight directions), just as if you were really flying it! But then YOU ARE! The Enemy Saucers will actually zoom towards you in 3D, and shoot you if you let them! Your display includes Score, Shield Strength, Altitude, Proximity, Forward Radar and your viewscreen, which shows your rotating home planet, backdrop of Stars, Meteors, Explosions, Plasma Blasts, your Photon Beams, up to 4 Enemy Saucers and of course its all in full 3D!

"Another 3D winner" . . . SINCLAIR USER

**GAMESTAPE 6 for 1K** ..... only £1.95  
**\*BREAKOUT** Super Fast Full Screen Display Game. Your all time favourite with an added twist. See how much Money you can win and watch the pounds convert to Dollars. All in Machine Code for Fast Action with 3 Speeds, 2 Bat Sizes and three angles of rebound! The best BREAKOUT around and at this price you can't go wrong!

"The best of its kind" . . . WHICH MICRO & SOFTWARE REVIEW

## Three New Video Games from PCP For Young and Old Alike

FOR  
VIC

### HEADBANGER

**Theme:** Headbanger enjoys being hit on the head by hammers falling from the sky but collapses if hit by too many without an aspirin hitting as well. At the same time Headbanger tries to grab money bags. A brick wall on the screen is gradually knocked down by the hammers as the player attempts to strike Headbanger and to reach the money bags.

**Action:** Points for head collisions and money bags, plus 'pain meter' for head-to-hammer or aspirin-to-head collisions and for money bags stowed.

**Price:** £9.95 incl. V.A.T.

### Rox

**Theme:** Rocks fall from the sky and the player tries to blast them with missiles before they hit the ground.

**Action:** Scores are awarded for hits and 'secret bonuses'.

**Price:** £5.95 incl. V.A.T.

### 3D Maze

**Theme:** The player attempts to escape from the maze which is shown in perspective view.

**Action:** Ratings are scored for the time taken to find the exit from the maze.

**Price:** £4.95 incl. V.A.T.

● Dealer enquiries welcome.

## NEW FROM MR MICRO

**V.S.L.** — You may be familiar with some of the many tune playing programs available for the Vic but we now offer something which takes the Vic to new musical and sound heights. **VIC SOUND LANGUAGE** or **V.S.L.** gives full control over the sound envelope of its attack, sustain and decay and volume. In fact, V.S.L. converts the Vic into a sound synthesizer. Once loaded the new fully tokenized command can be incorporated into other programs to make sound effects effective and music musical. The package includes versions for any expanded Vic, sample performances and instruction manual. **£10.95 Inc VAT.**

**VIC TINY BASIC COMPILER** — produces true 6502 code. Sub-set of BASIC supports all floating point operations. Compiler listing optional if you have memory (8k exp). Req. 3k-8k expander. **£15.95 Inc VAT.**

Mr Micro are pleased to announce the following new releases in our popular Vic Value Series.

#### VIC VALUE NO 2

Alphasquare, Switchback

Rayflection, Micromind — **£6.95 Inc VAT**

#### VIC VALUE NO 3

2 player chess and chess clock, Joygen

Aien Scanner, Martian Defence — **£6.95 Inc VAT**

Send SAE for our latest catalogue. For 24 hour telephone ordering service with Access or Visa ring 061 728 2282. Or send cheque/P.O. to **MR MICRO LTD, 69 PARTINGTON LANE, SWINTON, MANCHESTER M27 3AL.**

WE ARE NOW A MEMBER OF THE SPECTRUM COMPUTER GROUP. OUR RETAIL SHOP IS NOW OPEN. WE LOOK FORWARD TO SEEING YOU THERE.

# BBC MICRO INSTANT MACHINE CODE!

Yes, it's true. Instant machine code from a good subset of BBC BASIC. Type your BASIC program into your model B BBC Micro, trigger the compiler, and your program is changed almost instantaneously into superfast machine code. For £34.95 you get: Cassette version of the complete compiler (along with a version of the compiler for use with discs, ready for when you upgrade, the disc version being dubbed on the cassette after the cassette version); complete compiler listing; extensive documentation and instructions. The compiler was written by Jeremy Ruston.

## THE BBC MICRO REVEALED

By Jeremy Ruston

... destined to become the bible of all BBC microcomputer users... (Personal Computing Today). If you've mastered the manual, then this book is for you. Just £7.95

## LET YOUR BBC MICRO TEACH YOU TO PROGRAM

By Tim Hartnell

'... takes you further into the cloudy areas of the BBC machine than anything else I've yet seen...' (Computer and Video Games). If you're just starting out in the world of programming, then this book is the one for you. Forty complete programs, including Othello/Reversi, Piano and a host of dramatic graphic demos. Just £6.45

## IMAGINE

a company brought into being by top professional programmers, graphic designers and software marketing specialists.

A company dedicated to the highest quality software and customer service in the world.

## ARCADIA

the name of the game especially created to be the fastest, meanest, most addictive shoot 'em up game you've ever desired. Wave after wave of the most loathsome and deadly aliens billow hypnotically towards your space fighter with deadly intent. But then you have dual Plasma Disruptors and an Ion Thrust Drive haven't you? ...

## ZXSPECTRUM

(16K or 48K)

100% machine code with 12 different alien types, incredible animation and explosive effects, sound and the fastest, smoothest hi-res graphics ever!

## VIC-20

(any memory size)

100% machine code with eight different alien types, smooth hi-res multicolour graphics and animation, narrow playfield and sensational sound effects. Keyboard or joystick. Game design and software by D. H. Lawson.

## ARCADIA

For any ZX SPECTRUM or VIC-20. Just

# £5.50

which includes first class postage and packing, V.A.T., and an **UNCONDITIONAL LIFETIME GUARANTEE.**

MINIMUM OF ONE  
NEW GAME EVERY  
MONTH  
ALL PROGRAMS £9.99

**ALL ACTION GAMES CARRY A FREE ENTRY TO NATIONWIDE COMPETITIONS WITH FANTASTIC PRIZES**

## SEA INVASION FOR THE UNEXPANDED VIC 20

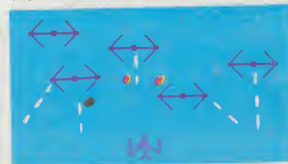

Fight off the attacking sea creatures for as long as you can. Shoot the whale for a surprise score. Watch out for the crabs, starfish, & octopi !!!!!!!!!!!!!!!!!!!!!!!

## MOONS OF JUPITER FOR EXPANDED VIC 20, 3K, 8K OR 16K

You are the commander of a fleet of destroyers... Looking on from the safety of mother ship, you send in one destroyer at a time to blast a passage through the moons of Jupiter. Your destroyers have to dodge, and blast the "U.F.O.'s"... Watch out for the 'Gologs', they can smash your destroyers, but you cannot harm them ....

## SPACE ATTACK FOR THE UNEXPANDED VIC 20

Space attack is a game of skill, you, as the pilot of an intergalactic battleship, have to fight your way through wave after wave of various alien space ships

## MARTIAN RAIDER

FOR UNEXPANDED VIC 20

Skim as close as you dare to the surface of the planet, devastating the Martian cities, destroying ammunition dumps (gaining more time), shooting down the ground to air missiles and U.F.O.s, dodging or blasting the meteorites.

"A REAL ACTION SHOT OF THE GAME"

## SHARK ATTACK

FOR UNEXPANDED VIC 20

You are in shark infested waters after being thrown overboard from a pirate ship. Your only protection being an atomic net which you trail behind you, trying to cover all the visible ocean and ensnare the sharks at the same time. Beware of stopping or covering your tracks for too long, if you do, then the sharks will escape and come after you. Watch out for the ever increasing deadly octopi (sometimes the sharks will eat part or all of one!).

"A REAL ACTION SHOT OF THE GAME"

## MIND TWISTERS

FOR UNEXPANDED VIC 20  
FOUR GAMES TO STRETCH YOUR BRAIN  
Blackjack, Decipher, Four Thought and Teaser are our computerised versions of very popular home games and will test your mental agility and skill for many a long hour.

**ROBOT PANIC... A FANTASTIC HIGH SPEED GAME ON CARTRIDGE THE PRICE IS YET TO BE ANNOUNCED, BUT AROUND £16.**

## SUPER NINE

## ZX81

NINE 1K GAMES

- 1.. CANYON
- 2.. ASTEROIDS
- 3.. ASTROBLASTER
- 4.. DEFENDER
- 5.. SQUASH
- 6.. SCRAMBLE
- 7.. SKETCH
- 8.. COSMIC RAIDER
- 9.. FOUR THOUGHT.

## MULTISOUND SYNTHESIZER

FOR THE UNEXPANDED VIC 20

The Vic Multisound Synthesiser is very flexible and can be played in more ways than can ever be explained here, to create music and special effects. For example, create any tune, up to 255 notes (after following appropriate instructions), then press "F1" or "F3", then key "9" and enjoy the added effect. Now hit "+", listen to the difference. For a surprise — hit "—". Now add a melody over the top — hit key "8" then "7" — now play a melody, or experiment. *Have fun!*
